<b>List of Contributors</b>	<b>xiii</b>
<b>Foreword</b>	<b>xv</b>
<b>Preface</b>	<b>xvii</b>
<b>Acknowledgments</b>	<b>xxi</b>
<b>List of Abbreviations</b>	<b>xxiii</b>
<b>1 Background and Introduction</b>	<b>1</b>
<i>Paulo P. Monteiro, Atilio Gameiro and Nathan J. Gomes</i>	
1.1 The Trends and Challenges to Achieving 4G Wireless	2
1.1.1 Motivation	2
1.1.2 The Quest for High Bit Rates in Wireless Communications	2
1.1.3 System Capacity	3
1.1.4 Infrastructure Costs, Deployment and Upgradeability Constraints	4
1.1.5 Trends and Issues in Wired Broadband and Infrastructure Convergence	6
1.2 The FUTON Concept for Next-Generation Distributed and Heterogeneous Radio Architectures	8
1.2.1 Global Architecture and the Main Evolutionary Scenarios	9
1.2.2 Optical Infrastructure Signalling	11
1.2.3 The FUTON Consortium	11
1.3 Overview of this Book	12
References	15
<b>2 Trends in Wireless Communications</b>	<b>17</b>
<i>Aarne Mämmelä, Mika Lasanen and Jarno Pinola</i>	
2.1 Introduction	17
2.2 Basic Transmission Problems and Solutions	18
2.2.1 Transmission Problems	19
2.2.2 Solutions in the Physical Layer	24
2.2.3 Solutions in the Network Layer	31
2.2.4 Fundamental Limits and Trends	35

2.3	Regulation and Standardization	37
2.3.1	Regulation	37
2.3.2	Standardization	38
2.4	Conclusions	41
	References	41
<b>3</b>	<b>System Concepts for the Central Processing of Signals</b>	<b>47</b>
	<i>Atílio Gameiro and Daniel Castanheira</i>	
3.1	Introduction	47
3.2	Wireless Trends	48
3.2.1	Provision of Broadband Access	48
3.2.2	System Capacity	48
3.2.3	Power Efficiency	49
3.2.4	Fairness in Access	50
3.3	Architecture Options	51
3.4	The Global Centralized Architecture	52
3.4.1	Terminology	53
3.4.2	DBWS Architecture Elements	53
3.4.3	Physical Elements of the DBWS	54
3.5	FUTON Scenarios	55
3.5.1	Enhanced Cellular Scenario	55
3.5.2	Advanced Scenario	57
3.6	The Optical Infrastructure	58
3.7	Conclusions	60
	References	60
<b>4</b>	<b>Introduction to Radio over Fiber</b>	<b>61</b>
	<i>Nathan J. Gomes and David Wake</i>	
4.1	Introduction	61
4.2	The Concept of a Radio over Fiber System	62
4.3	Categories of Radio over Fiber Systems	64
4.3.1	Types of Transport	64
4.3.2	Types of Modulation	66
4.3.3	Types of Fiber	67
4.3.4	Subcarrier Multiplexing	67
4.3.5	Millimeter-Wave-over-Fiber Systems	68
4.4	Performance of Radio over Fiber Systems	72
4.4.1	System Performance Characterization	72
4.4.2	System Component Effects	75
4.4.3	Improving System Performance	77
4.5	Applications of Radio over Fiber Technology	79
4.5.1	Wireless or Mobile Communication Systems	79
4.5.2	Beam-forming and Phased Arrays	81
4.5.3	Cable Television Systems	81
4.5.4	Radio Astronomy	83
4.5.5	Future Perspectives	83

4.6	Conclusions	84
	References	84
<b>5</b>	<b>Radio over Fiber System Design for Distributed Broadband Wireless Systems</b>	<b>91</b>
	<i>David Wake and Nathan J. Gomes</i>	
5.1	Introduction	91
5.2	Radio over Fiber Link Design Issues	93
5.2.1	Carrier Frequency	93
5.2.2	Channel Bandwidth	94
5.2.3	Number of Channels	94
5.2.4	Peak-to-Average-Power Ratio	95
5.2.5	Modulation Scheme	95
5.2.6	Uplink Power Control	96
5.3	Example Link Design	97
5.3.1	Link Architecture	97
5.3.2	Optical Source and Receiver Types	99
5.3.3	Link Budget Calculations	100
5.3.4	EVM Measurements	103
5.3.5	Wireless Range Calculations	106
5.4	Analog or Digital Transmission?	108
5.5	Conclusions	110
	References	111
<b>6</b>	<b>Optical Network Architectures for the Support of Future Wireless Systems</b>	<b>113</b>
	<i>Sílvia Pato and João Pedro</i>	
6.1	Introduction	113
6.2	Using PONs to Support Radio over Fiber Services	114
6.2.1	Wavelength Allocation Plans	114
6.2.2	Multiplexing Schemes	115
6.3	Candidate Architectures	117
6.3.1	A: Separate Up- and Downlink Wavelengths	118
6.3.2	B: Shared Downlink Wavelengths	119
6.3.3	C: Single CWDM Channel	120
6.3.4	D: Broadcast and Select	120
6.3.5	E: Reflective RAUs	121
6.3.6	Comparison of Candidate Architectures	122
6.4	Power-Loss Budget Analysis	122
6.5	Comparative Economic Analysis	128
6.6	Support of Legacy Systems	130
6.7	Conclusions	131
	References	131

<b>12 System-Level Evaluation</b>	<b>265</b>
<i>Ramiro Sámano-Robles and Atilio Gameiro</i>	
12.1 Introduction	265
12.1.1 Motives for System-Level Simulation of Wireless Networks	265
12.1.2 Issues in the Design of System-Level Simulators for Wireless Networks	266
12.1.3 System-Level Simulation of FUTON and the DBWS	267
12.1.4 Scope and Organization of this Chapter	268
12.2 System-Level Simulation of Wireless Networks and DAS	269
12.2.1 Link-to-System-Level Interface (LSLI) Modeling	269
12.2.2 Simulation Platforms	270
12.2.3 OFDMA Systems	270
12.2.4 Propagation Models	271
12.2.5 Distributed Antenna Systems at the System Level	271
12.3 The FUTON System-Level Simulator	272
12.3.1 Simulator Logical Architecture	272
12.3.2 Simulation Modes	274
12.3.3 Manhattan Deployment Scenario and Propagation Model	275
12.3.4 Traffic and Mobility Models	278
12.3.5 OFDMA Frame Definition	278
12.3.6 Link to System-Level Interface (LSLI) Modeling	280
12.3.7 Optical Link Impairment Modeling and Compensation Schemes	282
12.4 Radio Resource Management Implementation for the DBWS	285
12.5 Results of the Simulation	286
12.6 Conclusions	289
