# Contents

Preface .....	xv
Acknowledgments .....	xix
Symbols .....	xxi
Acronyms .....	xxix
<b>1 Introduction to Radar Systems and Signal Processing .....</b>	<b>1</b>
1.1 History and Applications of Radar .....	1
1.2 Basic Radar Functions .....	2
1.3 Elements of a Pulsed Radar .....	5
1.3.1 Transmitter and Waveform Generator .....	6
1.3.2 Antennas .....	8
1.3.3 Receivers .....	14
1.4 Common Threads in Radar Signal Processing .....	18
1.4.1 Signal-to-Interference Ratio and Integration .....	18
1.4.2 Resolution .....	19
1.4.3 Data Integration and Phase History Modeling .....	22
1.4.4 Bandwidth Expansion .....	24
1.5 A Preview of Basic Radar Signal Processing .....	25
1.5.1 Radar Time Scales .....	26
1.5.2 Phenomenology .....	27
1.5.3 Signal Conditioning and Interference Suppression .....	28
1.5.4 Imaging .....	31
1.5.5 Detection .....	32
1.5.6 Measurements and Track Filtering .....	34
1.6 Radar Literature .....	35
1.6.1 Radar Systems and Components .....	35
1.6.2 Basic Radar Signal Processing .....	36
1.6.3 Advanced Radar Signal Processing .....	36
1.6.4 Radar Applications .....	36
1.6.5 Current Radar Research .....	37
References .....	37
Problems .....	38
<b>2 Signal Models .....</b>	<b>41</b>
2.1 Components of a Radar Signal .....	41
2.2 Amplitude .....	42
2.2.1 Simple Point Target Radar Range Equation .....	42
2.2.2 Distributed Target Forms of the Range Equation .....	44
2.2.3 Radar Cross Section .....	50

2.2.4	Radar Cross Section for Meteorological Targets	51
2.2.5	Statistical Description of Radar Cross Section	53
2.2.6	Target Fluctuation Models	67
2.2.7	Swirling Models	70
2.2.8	Effect of Target Fluctuations on Doppler Spectrum	70
2.3	Clutter	72
2.3.1	Behavior of $\sigma^0$	73
2.3.2	Signal-to-Clutter Ratio	75
2.3.3	Temporal and Spatial Correlation of Clutter	76
2.3.4	Compound Models of Radar Cross Section	78
2.4	Noise Model and Signal-to-Noise Ratio	79
2.5	Jamming	83
2.6	Frequency Models: The Doppler Shift	83
2.6.1	Doppler Shift	83
2.6.2	The Stop-and-Hop Approximation and Phase History	86
2.6.3	Measuring Doppler Shift: Spatial Doppler	89
2.7	Spatial Models	90
2.7.1	Coherent Scattering	90
2.7.2	Variation with Angle	92
2.7.3	Variation with Range	95
2.7.4	Noncoherent Scattering	96
2.7.5	Projections	97
2.7.6	Multipath	97
2.8	Spectral Model	98
2.9	Summary	100
References		100
Problems		102
<b>3</b>	<b>Pulsed Radar Data Acquisition</b>	<b>107</b>
3.1	Acquiring and Organizing Pulsed Radar Data	107
3.1.1	One Pulse: Fast Time	107
3.1.2	Multiple Pulses: Slow Time and the CPI	110
3.1.3	Doppler and Range Ambiguities	113
3.1.4	Multiple Channels: The Datacube	116
3.1.5	Dwells	117
3.2	Sampling the Doppler Spectrum	118
3.2.1	The Nyquist Rate in Doppler	119
3.2.2	Straddle Loss	120
3.3	Sampling in the Spatial and Angle Dimensions	124
3.3.1	Spatial Array Sampling	125
3.3.2	Sampling in Angle	126
3.4	I/Q Imbalance and Digital I/Q	128
3.4.1	I/Q Imbalance and Offset	128
3.4.2	Correcting I/Q Errors	131
3.4.3	Digital I/Q	133

References	137	
Problems	138	
<b>4</b>	<b>Radar Waveforms</b>	<b>141</b>
4.1	Introduction	141
4.2	The Waveform Matched Filter	142
4.2.1	The Matched Filter	142
4.2.2	Matched Filter for the Simple Pulse	145
4.2.3	All-Range Matched Filtering	146
4.2.4	Straddle Loss	147
4.2.5	Range Resolution of the Matched Filter	147
4.3	Matched Filtering of Moving Targets	148
4.4	The Ambiguity Function	150
4.4.1	Definition and Properties of the Ambiguity Function	150
4.4.2	Ambiguity Function of the Simple Pulse	153
4.5	The Pulse Burst Waveform	156
4.5.1	Matched Filter for the Pulse Burst Waveform	157
4.5.2	Pulse-by-Pulse Processing	158
4.5.3	Range Ambiguity	160
4.5.4	Doppler Response of the Pulse Burst Waveform	163
4.5.5	Ambiguity Function for the Pulse Burst Waveform	164
4.5.6	The Slow-Time Spectrum and the Periodic Ambiguity Function	168
4.6	Frequency-Modulated Pulse Compression Waveforms	169
4.6.1	Linear Frequency Modulation	170
4.6.2	The Principle of Stationary Phase	173
4.6.3	Ambiguity Function of the LFM Waveform	175
4.6.4	Range-Doppler Coupling	178
4.6.5	Stretch Processing	179
4.7	Range Sidelobe Control for FM Waveforms	183
4.7.1	Matched Filter Frequency Response Shaping	183
4.7.2	Matched Filter Impulse Response Shaping	186
4.7.3	Waveform Spectrum Shaping	187
4.8	The Stepped Frequency Waveform	188
4.9	The Stepped Chirp Waveform	194
4.10	Phase-Modulated Pulse Compression Waveforms	195
4.10.1	Biphase Codes	196
4.10.2	Polyphase Codes	202
4.10.3	Mismatched Phase Code Filters	206
4.11	Costas Frequency Codes	207
4.12	Continuous Wave Radar	208
References	209	
Problems	210	

<b>5 Doppler Processing</b>	<b>215</b>
5.1 Moving Platform Effects on the Doppler Spectrum	217
5.2 Moving Target Indication	221
5.2.1 Pulse Cancellers	223
5.2.2 Vector Formulation of the Matched Filter	226
5.2.3 Matched Filters for Clutter Suppression	227
5.2.4 Blind Speeds and Staggered PRFs	231
5.2.5 MTI Figures of Merit	237
5.2.6 Limitations to MTI Performance	241
5.3 Pulse Doppler Processing	244
5.3.1 The Discrete-Time Fourier Transform of a Moving Target	245
5.3.2 Sampling the DTFT: The Discrete Fourier Transform	248
5.3.3 The DFT of Noise	250
5.3.4 Pulse Doppler Processing Gain	251
5.3.5 Matched Filter and Filterbank Interpretations of Pulse Doppler Processing with the DFT	251
5.3.6 Fine Doppler Estimation	253
5.3.7 Modern Spectral Estimation in Pulse Doppler Processing	259
5.3.8 CPI-to-CPI Stagger and Blind Zone Maps	260
5.4 Pulse Pair Processing	265
5.5 Additional Doppler Processing Issues	269
5.5.1 Combined MTI and Pulse Doppler Processing	269
5.5.2 Transient Effects	270
5.5.3 PRF Regimes	271
5.5.4 Ambiguity Resolution	277
5.6 Clutter Mapping and the Moving Target Detector	280
5.6.1 Clutter Mapping	280
5.6.2 The Moving Target Detector	282
5.7 MTI for Moving Platforms: Adaptive Displaced Phase Center Antenna Processing	283
5.7.1 The DPCA Concept	283
5.7.2 Adaptive DPCA	285
References	289
Problems	290
<b>6 Detection Fundamentals</b>	<b>295</b>
6.1 Radar Detection as Hypothesis Testing	295
6.1.1 The Neyman-Pearson Detection Rule	296
6.1.2 The Likelihood Ratio Test	297
6.2 Threshold Detection in Coherent Systems	305
6.2.1 The Gaussian Case for Coherent Receivers	307
6.2.2 Unknown Parameters and Threshold Detection	309

6.2.3 Linear and Square-Law Detectors	315
6.2.4 Other Unknown Parameters	317
6.3 Threshold Detection of Radar Signals	318
6.3.1 Coherent, Noncoherent, and Binary Integration	319
6.3.2 Nonfluctuating Targets	320
6.3.3 Albersheim's Equation	324
6.3.4 Fluctuating Targets	327
6.3.5 Shnidman's Equation	330
6.4 Binary Integration	332
6.5 Constant False Alarm Rate Detection	335
6.5.1 The Effect of Unknown Interference Power on False Alarm Probability	335
6.5.2 Cell-Averaging CFAR	337
6.5.3 Analysis of Cell-Averaging CFAR	340
6.5.4 CA CFAR Limitations	344
6.5.5 Extensions to Cell-Averaging CFAR	348
6.5.6 Order Statistic CFAR	354
6.5.7 Additional CFAR Topics	357
6.6 System-Level Control of False Alarms	362
References	363
Problems	365
<b>7 Measurements and Tracking</b>	<b>369</b>
7.1 Estimators	370
7.1.1 Estimator Properties	370
7.1.2 The Cramèr-Rao Lower Bound	373
7.1.3 The CRLB and Signal-to-Noise Ratio	375
7.1.4 Maximum Likelihood Estimators	376
7.2 Range, Doppler, and Angle Estimators	377
7.2.1 Range Estimators	377
7.2.2 Doppler Signal Estimators	390
7.2.3 Angle Estimators	397
7.3 Introduction to Tracking	413
7.3.1 Sequential Least Squares Estimation	414
7.3.2 The $\alpha$ - $\beta$ Filter	418
7.3.3 The Kalman Filter	422
7.3.4 The Tracking Cycle	429
References	434
Problems	435
<b>8 Introduction to Synthetic Aperture Imaging</b>	<b>441</b>
8.1 Introduction to SAR Fundamentals	445
8.1.1 Cross-Range Resolution in Radar	445
8.1.2 The Synthetic Aperture Viewpoint	447
8.1.3 Doppler Viewpoint	454
8.1.4 SAR Coverage and Sampling	456

8.2	Stripmap SAR Data Characteristics	459
8.2.1	Stripmap SAR Geometry	459
8.2.2	Stripmap SAR Data Set	462
8.3	Stripmap SAR Image Formation Algorithms	465
8.3.1	Doppler Beam Sharpening	465
8.3.2	Quadratic Phase Error Effects	469
8.3.3	Range-Doppler Algorithms	474
8.3.4	Depth of Focus	480
8.4	Spotlight SAR Data Characteristics	481
8.5	The Polar Format Image Formation Algorithm for Spotlight SAR	486
8.6	Interferometric SAR	488
8.6.1	The Effect of Height on a SAR Image	488
8.6.2	IFSAR Processing Steps	491
8.7	Other Considerations	496
8.7.1	Motion Compensation and Autofocus	496
8.7.2	Autofocus	499
8.7.3	Speckle Reduction	506
	References	510
	Problems	512

## **Introduction to Beamforming and Space-Time**

<b>Adaptive Processing</b>	<b>515</b>
9.1 Spatial Filtering	515
9.1.1 Beamforming	515
9.1.2 Adaptive Beamforming	519
9.1.3 Adaptive Beamforming with Preprocessing	524
9.2 Space-Time Signal Environment	526
9.3 Space-Time Signal Modeling	530
9.4 Processing the Space-Time Signal	533
9.4.1 Optimum Matched Filtering	533
9.4.2 STAP Metrics	534
9.4.3 Relation to Displaced Phase Center Antenna Processing	538
9.4.4 Adaptive Matched Filtering	542
9.5 Reduced-Dimension STAP	544
9.6 Advanced STAP Algorithms and Analysis	546
9.7 Limitations to STAP	547
References	548
Problems	550
