<i>Series Preface</i>	xv
<i>Preface</i>	xvii
<b>1 Introduction to Silicon Photonics</b>	<b>1</b>
1.1 Introduction	1
1.2 VLSI: Past, Present, and Future Roadmap	2
1.3 The Interconnect Problem in VLSI	3
1.4 The Long-Haul Optical Communication Link	5
1.4.1 Basic Link and Components	5
1.4.2 Materials and Integration	7
1.5 Data Network	8
1.6 Conclusions	8
1.7 Scope of the Book	9
References	11
<b>2 Basic Properties of Silicon</b>	<b>13</b>
2.1 Introduction	13
2.2 Band Structure	14
2.2.1 E–k Diagram: General Considerations	14
2.2.2 Band Properties near Extremas	16
2.2.3 Refined Theory for Band Structures	17
2.2.4 Temperature- and Pressure-Dependent Band Gap	18
2.2.5 Band Structure in Ge	18
2.3 Density-of-States Function	19
2.4 Impurities	22
2.4.1 Donors and Acceptors	22
2.4.2 Isoelectronic Impurities	23
2.5 Alloys of Silicon and Other Group IV Elements	24
2.5.1 Different Alloy Systems	24
2.5.2 Lattice Constants	24
2.5.3 Band Structures of Unstrained Alloys	25
2.6 Heterojunctions and Band Lineup	26
2.7 Si-Based Heterostructures	27
2.7.1 Lattice-Mismatched Heteroepitaxy	27
2.7.2 Pseudomorphic Growth and Critical Thickness	28
2.7.3 Elasticity Theory: Stress and Strain	28
2.7.4 Expressions for Critical Thickness	30
2.7.5 Strain Symmetric Structures and Virtual Substrates	31

2.7.6 Band Offsets and Band Lineup	32	4.7 Absorption and Gain	86
2.7.7 Electronic Properties of SiGe/Si Heterostructures	36	4.8 Intervalence Band Absorption	89
2.8 Direct Gap: Ge/SiGeSn Heterojunctions	39	4.9 Free-carrier Absorption	89
2.8.1 Structures	39	4.10 Recombination and Luminescence	92
2.8.2 Band Edges and Band Lineup	40	4.10.1 Luminescence Lifetime	92
Problems	42	4.10.2 Carrier Lifetime: Dependence on Carrier Density	94
References	44	4.10.3 Absorption and Recombination	95
Suggested Readings	45	4.10.4 Microscopic Theory of Recombination	96
<b>3 Quantum Structures</b>	<b>47</b>	4.11 Nonradiative Recombination	97
3.1 Introduction	47	4.11.1 Recombination via Traps	97
3.2 Quantum Wells	47	4.11.2 Auger Recombination	100
3.2.1 Condition for Quantum Confinement	48	4.11.3 Surface Recombination	101
3.2.2 A Representative Structure	48	4.11.4 Recombination of Complexes	102
3.2.3 Simplified Energy Levels	49	4.12 Excitonic and Impurity Absorption	102
3.2.4 Density-of-States in Two Dimensions	52	4.12.1 Excitons	102
3.2.5 Finite Quantum Well	53	4.12.2 Impurity	104
3.2.6 Refined Methods	54	4.12.3 Bound Excitons	104
3.2.7 Different Band Alignments	55	4.12.4 Isoelectronic Centres	105
3.3 Quantum Wires and Dots	55	Problems	105
3.3.1 Subbands and DOS in Quantum Wires	56	References	107
3.3.2 Quantum Dots	57		
3.4 Superlattices	58	<b>5 Optical Processes in Quantum Structures</b>	<b>109</b>
3.5 Si-Based Quantum Structures	59	5.1 Introduction	109
3.5.1 Electron Subband Structure	59	5.2 Optical Processes in QWs	110
3.5.2 Hole Subbands	62	5.2.1 Absorption in Direct-gap QW	110
3.5.3 Quantum Wells and Barriers	62	5.2.2 Gain in QW	112
3.6 Effect of Electric Field	63	5.2.3 Recombination in QWs	112
Problems	65	5.2.4 Polarization-Dependent Momentum Matrix Element	113
References	67	5.2.5 Absorption in the Indirect Gap	114
Suggested Readings	67	5.2.6 Absorption in Type II QWs	117
<b>4 Optical Processes</b>	<b>69</b>	5.3 Intersubband Transitions	118
4.1 Introduction	69	5.3.1 Conduction Subbands: Isotropic Mass	119
4.2 Optical Constants	69	5.3.2 Anisotropic Mass	120
4.3 Basic Concepts	73	5.3.3 Intervalence Band Absorption	122
4.3.1 Absorption and Emission	73	5.4 Excitonic Processes in QWs	122
4.3.2 Absorption and Emission Rates	73	5.4.1 Excitons in 2D: Preliminary Concepts	122
4.4 Absorption Processes in Semiconductors	74	5.4.2 Excitons in Purely 2D Systems	123
4.5 Fundamental Absorption in Direct Gap	75	5.4.3 Excitonic Absorption in Direct-gap QWs	125
4.5.1 Conservation Laws	75	5.4.4 Excitonic Processes in Indirect-gap QWs	126
4.5.2 Calculation of Absorption Coefficient	76	5.4.5 Photoluminescence in QWs	127
4.6 Fundamental Absorption in Indirect Gap	82	5.5 Effect of Electric Fields	127
4.6.1 Theory of Absorption	83	5.5.1 Qualitative Discussion of Electroabsorption	128
4.6.2 Absorption Spectra in Si	85	5.5.2 Electroabsorption and Electorefraction in SiGe QWs	129
4.6.3 Absorption Spectra in Ge	86	5.6 Optical Processes in QWRs	132
		5.7 Optical Processes in QDS	133
		Problems	135
		References	136

<b>6 Light Emitters in Si</b>	<b>139</b>	<b>7.7.3 MZI versus a Resonator</b>	<b>185</b>
6.1 Introduction	139	7.8 Electrical Structures	186
6.2 Basic Theory of Light Emission	140	7.8.1 p-i-n Structures	186
6.3 Early Efforts: Zone Folding	142	7.8.2 Three-Terminal Structures	188
6.4 Band Structure Engineering Using Alloys	143	7.8.3 Smaller Structures	188
6.5 Quantum Confinement	145	7.8.4 MOS Capacitors	189
6.5.1 Quasi-direct No-phonon Transition	146	7.8.5 MQW Structures	190
6.5.2 Porous Si	148	7.9 High-Bandwidth Modulators	190
6.5.3 Silicon Nanocrystals	149	7.9.1 Ring Resonator	190
6.5.4 Quantum Wells, Wires, and Dots	151	7.9.2 MZ Modulators at 10 Gb/s and Above	191
6.6 Impurities in Silicon	152	7.9.3 Microring Resonators	192
6.6.1 Isoelectronic Impurities	152	7.9.4 Reverse Biased p-n Diode	193
6.6.2 Rare-earth Luminescence	152	7.10 Performance of EO Modulators	193
6.7 Stimulated Emission: Prospect	157	Problems	193
6.7.1 Si Nanocrystals	157	References	194
6.7.2 Bulk Si	159		
6.8 Intersubband Emission	161	<b>8 Silicon Photodetectors</b>	<b>197</b>
6.8.1 Emission at Mid-infrared	163	8.1 Introduction	197
6.8.2 Terahertz Emission	163	8.2 Optical Detection	199
6.9 Tensile-Strained Ge Layers	165	8.3 Important Characteristics of Photodetectors	202
Problems	167	8.3.1 Quantum Efficiency	202
References	167	8.3.2 Responsivity	204
<b>7 Si Light Modulators</b>	<b>171</b>	8.3.3 Bandwidth	206
7.1 Introduction	171	8.3.4 Gain	206
7.2 Physical Effects	172	8.3.5 Noise and Noise-Equivalent Power	206
7.2.1 Electroabsorption and Electrorefraction	173	8.3.6 Wavelength Sensitivity Range	209
7.2.2 Electro-Optic Effect	173	8.3.7 Cost and Yield	209
7.2.3 Franz-Keldysh Effect	175	8.3.8 Other Characteristics	210
7.2.4 Quantum-Confined Stark Effect	175	8.4 Examples of Types of Photodetectors	210
7.2.5 Carrier-Induced Effects	176	8.5 Examples of Photodiodes in Standard	
7.2.6 Thermo-Optic Effect	176	Silicon Technology	216
7.3 Electrorefraction in Silicon	177	8.6 Phototransistors in Standard Silicon Technology	221
7.3.1 Electro-Optic Effects	177	8.7 CMOS and BiCMOS	223
7.3.2 Carrier Effect	177	8.8 Silicon-on-Insulator (SOI)	223
7.3.3 Quantum Confined Stark Effect	179	8.9 Photodetectors Using Heteroepitaxy	227
7.4 Thermo-Optic Effects in Si	179	8.9.1 Si and SiGe Multiple Quantum Wells	227
7.5 Modulators: Some Useful Characteristics	180	8.9.2 Ge Detectors on Si	232
7.5.1 Modulation Depth	180	8.9.3 Related Theoretical Discussion	239
7.5.2 Modulation Bandwidth	180	Problems	242
7.5.3 Insertion Loss	181	References	244
7.5.4 Power Consumption	181		
7.5.5 Isolation	181		
7.6 Modulation Bandwidth under Injection	182	<b>9 Raman Lasers</b>	<b>249</b>
7.7 Optical Structures	183	9.1 Introduction	249
7.7.1 MZI	183	9.2 Raman Scattering: Basic Concepts	250
7.7.2 Fabry-Perot Resonator	184	9.2.1 Stokes and Anti-Stokes Lines	250
		9.2.2 Stimulated Raman Scattering	252

9.3 Simplified Theory of Raman Scattering	252	11.4.1 Phase-Matched Grating	310
9.4 Raman Effect in Silicon	255	11.4.2 Non-phase-matching	314
9.5 Raman Gain Coefficient	256	11.5 Some Useful Planar Devices	315
9.5.1 Mathematical Model	256	11.5.1 Splitters	315
9.5.2 Simulation Parameters	257	11.5.2 Directional Coupler	316
9.5.3 Threshold Power	257	11.5.3 Mach-Zehnder Interferometer	317
9.6 Continuous-Wave Raman Laser	259	11.5.4 Fabry-Perot Resonators	319
9.7 Further Developments	262	11.5.5 Bragg Gratings	321
Problems	262	11.5.6 Dielectric Mirrors	323
References	263	11.5.7 Ring Resonators	324
<b>10 Guided Lightwaves: Introduction</b>	<b>265</b>	11.5.8 Multiple-Ring Resonators	327
10.1 Introduction	265	11.5.9 Variable Optical Attenuator	327
10.2 Ray Optic Theory for Light Guidance	265	Problems	329
10.3 Reflection Coefficients	266	References	330
10.4 Modes of a Planar Waveguide	268		
10.4.1 The Symmetrical Planar Waveguide	269	<b>12 Waveguides for Dense Wavelength-Division Multiplexing (DWDM) Systems</b>	<b>333</b>
10.4.2 The Asymmetric Waveguide	270	12.1 Introduction	333
10.4.3 Single-Mode Condition	270	12.2 Structure and Operation of AWGs	334
10.4.4 Effective Index of a Mode	271	12.2.1 Structure and Working Principle	334
10.5 Wave Theory of Light Guides	271	12.2.2 Analysis	336
10.5.1 Wave Equation in a Dielectric	271	12.3 AWG Characteristics	337
10.5.2 The Ideal Slab Waveguide	272	12.3.1 Tuning and Free Spectral Range	337
10.6 3D Optical Waveguides	278	12.3.2 Frequency Response	340
10.6.1 Practical Waveguiding Geometries	278	12.3.3 Channel Cross-talk	341
10.6.2 Ray Optic Approach for 3D Guides	281	12.3.4 Polarization Dependence	341
10.6.3 Approximate Analyses of Guided Modes	281	12.4 Methods for Improving Performance	341
10.7 Loss Mechanisms in Waveguides	287	12.4.1 Flat Frequency Response	341
10.7.1 Scattering Loss	287	12.4.2 Polarization Independence	342
10.7.2 Absorption Loss	289	12.4.3 Temperature Insensitivity	343
10.7.3 Radiation Loss	290	12.5 Applications of AWGs	344
10.7.4 Coupling Loss	292	12.5.1 Demultiplexers and Multiplexers	344
10.8 Coupling to Optical Devices	292	12.5.2 Wavelength Routers	344
10.8.1 Grating Couplers	293	12.5.3 Multiwavelengh Receivers and Transmitters	345
10.8.2 Butt Coupling and End-fire Coupling	294	12.5.4 Add-Drop Multiplexers	346
10.9 Tapers	297	12.5.5 Optical Cross-connects: Reconfigurable Wavelength	
Problems	299	Routers (WRs)	346
References	300	12.5.6 Dispersion Equalizer	347
Suggested Readings	301	12.6 PHASAR-Based Devices on Different Materials	348
<b>11 Principle of Planar Waveguide Devices</b>	<b>303</b>	12.6.1 Silica on Silicon	348
11.1 Introduction	303	12.6.2 Silicon-on-Insulator	349
11.2 Model for Mode Coupling	303	12.6.3 Silicon Oxynitride	349
11.3 Directional Coupler	307	12.7 Echelle Grating	349
11.3.1 Phase-matched Directional Coupler	307	Problems	350
11.3.2 Non-phase-matched Coupler	309	References	350
11.4 Distributed Bragg Reflector	310		

<b>13</b>	<b>Fabrication Techniques and Materials Systems</b>	<b>353</b>
13.1	Introduction	353
13.2	Planar Processing	354
13.3	Substrate Growth and Preparation	354
13.3.1	Deposition and Growth of Materials	355
13.3.2	Epitaxial Growth	359
13.3.3	Molecular Beam Epitaxy (MBE)	360
13.4	Material Modification	361
13.4.1	Diffusion	361
13.4.2	Ion Implantation	363
13.5	Etching	366
13.5.1	Wet Etching	366
13.5.2	Dry Etching	366
13.5.3	Maskless Etching	368
13.5.4	Reactive Etching	369
13.6	Lithography	370
13.6.1	Mask Fabrication	370
13.6.2	Pattern Transfer	370
13.7	Fabrication of Waveguides	371
13.7.1	Silica on Silicon	372
13.7.2	Formation of Waveguides Using Silicon-on-Insulator	373
13.8	Grating Formation Process	376
13.8.1	Photosensitivity of Glass	376
13.8.2	Grating Formation	377
13.9	Materials Systems for Waveguide Formation	379
13.9.1	General Considerations	379
13.9.2	Characteristics of Guides and Simple Planar Components	380
13.9.3	A Comparative Study of Materials Systems	392
	Problems	395
	References	396
	Suggested Reading	400
	<i>Appendix A: k,p Method</i>	403
	<i>Appendix B: Values of Parameters</i>	421
	<i>Index</i>	423
