

CONTENTS

Preface

xiii

1. Antenna Array Basics

1

- 1.1. History of Antenna Arrays 3
- 1.2. Electromagnetics for Array Analysis 7
- 1.3. Solving for Electromagnetic Fields 13
 - 1.3.1. The Wave Equation 13
 - 1.3.2. Point Sources 15
 - 1.3.3. Hertzian Dipole 17
 - 1.3.4. Small Loop 19
 - 1.3.5. Plane Waves 21
- 1.4. Antenna Models 22
 - 1.4.1. An Antenna as a Circuit Element 22
 - 1.4.2. An Antenna as a Spatial Filter 24
 - 1.4.3. An Antenna as a Frequency Filter 27
 - 1.4.4. An Antenna as a Collector 29
 - 1.4.5. An Antenna as a Polarization Filter 30
- 1.5. Antenna Array Applications 34
 - 1.5.1. Communications System 34
 - 1.5.2. Radar System 35
 - 1.5.3. Radiometer 38
 - 1.5.4. Electromagnetic Heating 40
 - 1.5.5. Direction Finding 42
- 1.6. Organization and Overview 42
 - References 43

2. Array Factor Analysis

45

- 2.1. The Array Factor 45
 - 2.1.1. Phase Steering 48
 - 2.1.2. End-Fire Array 51
 - 2.1.3. Main Beam Steering with Frequency 52
 - 2.1.4. Focusing 53
- 2.2. Uniform Arrays 55
 - 2.2.1. Uniform Sum Patterns 55

vii

| | | |
|-----------|---|------------|
| 2.2.2. | Uniform Difference Patterns | 61 |
| 2.3. | Fourier Analysis of Linear Arrays | 63 |
| 2.4. | Fourier Analysis of Planar Arrays | 67 |
| 2.5. | Array Bandwidth | 75 |
| 2.6. | Directivity | 78 |
| 2.7. | Amplitude Tapers | 82 |
| 2.8. | z Transform of the Array Factor | 84 |
| 2.9. | Circular Arrays | 88 |
| 2.10. | Direction Finding Arrays | 91 |
| 2.10.1. | Adcock Array | 92 |
| 2.10.2. | Orthogonal Linear Arrays | 93 |
| 2.11. | Subarrays | 94 |
| 2.12. | Errors | 99 |
| 2.12.1. | Random Errors | 100 |
| 2.12.2. | Quantization Errors | 105 |
| 2.13. | Fractal Arrays | 108 |
| | References | 112 |
| 3. | Linear and Planar Array Factor Synthesis | 115 |
| 3.1. | Synthesis of Amplitude and Phase Tapers | 115 |
| 3.1.1. | Fourier Synthesis | 115 |
| 3.1.2. | Woodward–Lawson Synthesis | 118 |
| 3.1.3. | Least Squares Synthesis | 120 |
| 3.2. | Analytical Synthesis of Amplitude Tapers | 121 |
| 3.2.1. | Binomial Taper | 121 |
| 3.2.2. | Dolph–Chebyshev Taper | 123 |
| 3.2.3. | Taylor Taper | 127 |
| 3.2.4. | Bickmore–Spellmire Taper | 140 |
| 3.2.5. | Bayliss Taper | 141 |
| 3.2.6. | Unit Circle Synthesis of Arbitrary Linear Array Factors | 143 |
| 3.2.7. | Partially Tapered Arrays | 149 |
| 3.3. | Numerical Synthesis of Low-Sidelobe Tapers | 151 |
| 3.4. | Aperiodic Arrays | 156 |
| 3.4.1. | Thinned Arrays | 156 |
| 3.4.2. | Nonuniformly Spaced Arrays | 165 |
| 3.5. | Low-Sidelobe Phase Taper | 177 |
| 3.6. | Suppressing Grating Lobes Due to Subarray Weighting | 179 |
| 3.6.1. | Subarray Tapers | 179 |
| 3.6.2. | Thinned Subarrays | 183 |
| 3.7. | Plane Wave Projection | 193 |

| | | |
|-----------|--|------------|
| 3.8. | Interleaved Arrays | 197 |
| 3.9. | Null Synthesis | 203 |
| | References | 210 |
| 4. | Array Factors and Element Patterns | 216 |
| 4.1. | Pattern Multiplication | 216 |
| 4.2. | Wire Antennas | 223 |
| 4.2.1. | Dipoles | 223 |
| 4.2.2. | Helical Antenna | 231 |
| 4.3. | Aperture Antennas | 234 |
| 4.3.1. | Apertures | 234 |
| 4.3.2. | Open-Ended Waveguide Antennas | 239 |
| 4.3.3. | Slots in Waveguides | 244 |
| 4.3.4. | Horn Antennas | 249 |
| 4.4. | Patch Antennas | 257 |
| 4.5. | Broadband Antennas | 264 |
| 4.5.1. | Spiral Antennas | 264 |
| 4.5.2. | Dipole-Like Antennas | 271 |
| 4.5.3. | Tapered Slot Antennas | 272 |
| 4.5.4. | Dielectric Rod Antennas | 278 |
| | References | 283 |
| 5. | Nonplanar Arrays | 287 |
| 5.1. | Arrays with Multiple Planar Faces | 287 |
| 5.2. | Arrays on Singly Curved Surfaces | 290 |
| 5.2.1. | Circular Adcock Array | 300 |
| 5.3. | Arrays Conformal to Doubly Curved Surfaces | 309 |
| 5.4. | Distributed Array Beamforming | 319 |
| 5.5. | Time-Varying Arrays | 323 |
| 5.5.1. | Synthetic Apertures | 323 |
| 5.5.2. | Time-Modulated Arrays | 328 |
| 5.5.3. | Time-Varying Array Element Positions | 331 |
| | References | 337 |
| 6. | Mutual Coupling | 339 |
| 6.1. | Mutual Impedance | 341 |
| 6.2. | Coupling Between Two Dipoles | 342 |
| 6.3. | Method of Moments | 349 |
| 6.4. | Mutual Coupling in Finite Arrays | 358 |
| 6.5. | Infinite Arrays | 368 |
| 6.5.1. | Infinite Arrays of Point Sources | 369 |
| 6.5.2. | Infinite Arrays of Dipoles and Slots | 371 |

- 6.6. Large Arrays 376
 - 6.6.1. Fast Multipole Method 378
 - 6.6.2. Average Element Patterns 381
 - 6.6.3. Representative Element Patterns 382
 - 6.6.4. Center Element Patterns 383
- 6.7. Array Blindness and Scanning 386
- 6.8. Mutual Coupling Reduction/Compensation 391
- References 399

7. Array Beamforming Networks 401

- 7.1. Transmission Lines 401
- 7.2. S Parameters 405
- 7.3. Matching Circuits 407
- 7.4. Corporate and Series Feeds 408
- 7.5. Slotted Waveguide Arrays 416
 - 7.5.1. Resonant Waveguide Arrays 418
 - 7.5.2. Traveling-Wave Waveguide Arrays 421
- 7.6. Blass Matrix 425
- 7.7. Butler Matrix 426
- 7.8. Lenses 430
 - 7.8.1. Bootlace Lens 431
 - 7.8.2. Rotman Lens 432
- 7.9. Reflectarray 436
- 7.10. Array Feeds for Reflectors 439
- 7.11. Array Feeds for Horn Antennas 442
- 7.12. Phase Shifters 445
- 7.13. Transmit/Receive Modules 449
- 7.14. Digital Beamforming 455
- 7.15. Neural Beamforming 457
- 7.16. Calibration 459
- References 460

8. Smart Arrays 464

- 8.1. Retrodirective Arrays 464
- 8.2. Array Signals and Noise 467
- 8.3. Direction of Arrival Estimation 475
 - 8.3.1. Periodogram 476
 - 8.3.2. Capon's Minimum Variance 477
 - 8.3.3. MUSIC Algorithm 477
 - 8.3.4. Maximum Entropy Method 480
 - 8.3.5. Pisarenko Harmonic Decomposition 480
 - 8.3.6. ESPRIT 482
 - 8.3.7. Estimating and Finding Sources 483

- 8.4. Adaptive Nulling 484
 - 8.4.1. Sidelobe Blanking and Canceling 484
 - 8.4.2. Adaptive Nulling Using the Signal Correlation Matrix 486
 - 8.4.3. Adaptive Nulling via Power Minimization 496
- 8.5. Multiple-Input Multiple-Output (MIMO) System 515
- 8.6. Reconfigurable Arrays 519
- References 524
