PREFACE	xix
Chapter 1: Introduction to Optical Communications	1
1.1 THE ROLE OF THE OPTICAL NETWORKING.....	2
1.1.1 The Need for Connectivity and Capacity.....	2
1.1.2 Optical Networking and Lightpaths.....	3
1.2 HISTORICAL PERSPECTIVE.....	7
1.2.1 The Early Beginning and the First Generation of Optical Communications.....	8
1.2.2 The Second and Third Generations	10
1.2.3 The Fourth and Fifth Generations of Optical Systems and Networks	14
1.3 ETHERNET AS A FOUNDATION OF PACKET-BASED NETWORKING.....	18
1.3.1 Ethernet as a Layer-2 Networking Technology.....	18
1.3.2 100-Gigabit Ethernet as a High-Speed Networking Tool.....	20
1.3.3 OTN Technology as a High-Speed Transmission Tool.....	22
1.4 CLASIFICATION AND BASIC CONCEPT OF PHOTONIC TRANSMISSION SYSTEMS AND NETWORKS.....	23
1.4.1 Optical Fiber as a Foundation for Transmission and Networking.....	23
1.4.2 Optical Transmission Systems.....	24
1.4.3 Optical Networking Parameters.....	26
1.4.4 Optical Channel Capacity and Basic Signal References.....	28
1.5 FUTURE PERSPECTIVE.....	30
1.6 ORGANIZATION OF THE BOOK.....	31
PROBLEMS.....	34
References.....	35

Chapter 2: Optical Components and Modules	39
2.1 KEY OPTICAL COMPONENTS.....	39
2.2 OPTICAL FIBER.....	42
2.2.1 Optical Fibers Manufacturing and Cabling	43
2.2.2 Special Optical Fibers.....	46
2.2.3 Optical Fiber Types with Respect to Transmission Properties.....	49
2.2.4 Multicore and Few-Mode Optical Fibers.....	54
2.3 THE LIGHT SOURCES	56
2.3.1 Semiconductor Lasers.....	56
2.3.2 Light Emitting Diodes.....	69
2.4 OPTICAL FILTERS AND MULTIPLEXERS	72
2.4.1 The Fabry-Perot Filters.....	72
2.4.2 Mach-Zehnder Filter.....	75
2.4.3 Optical Grating Filters.....	76
2.4.4 Tunable Optical Filters.....	78
2.4.5 Optical Multiplexers and Demultiplexers.....	80
2.5 OPTICAL MODULATORS	83
2.5.1 Direct Optical Modulation.....	84
2.5.2 External Modulation of Optical Signals.....	86
2.6 OPTICAL AMPLIFIERS	94
2.6.1 Semiconductor Optical Amplifiers.....	95
2.6.2 Fiber Doped Amplifiers.....	95
2.7 PHOTODIODES.....	110
2.8 PROCESSING OPTICAL COMPONENTS.....	116
2.8.1 Components for Coupling, Isolation, and Adjustments of Optical Power.....	117
2.8.2 Optical Switches.....	121
2.8.3 Wavelength Converters.....	127
2.9 SUMMARY	132
PROBLEMS.....	132
References.....	136

Chapter 3: Signal Propagation in Optical Fibers	141
3.1 OPTICAL FIBER LOSSES	141
3.2 WAVEGUIDE THEORY OF OPTICAL FIBERS	145
3.2.1 Electromagnetic Field and Wave Equations.....	145
3.2.2 Optical Modes in Step-Index Optical Fibers.....	148
3.2.3 Definition of a Single-Mode Regime.....	154
3.2.4 Modes in Grade-Index Optical Fibers.....	156
3.3 SIGNAL DISPERSION IN SINGLE-MODE OPTICAL FIBERS.....	160
3.3.1 Modal Dispersion.....	160
3.3.2 Chromatic Dispersion.....	160
3.3.3 Polarization Mode Dispersion.....	165
3.3.4 Self-Phase Modulation in Optical Fibers.....	171
3.4 PULSE PROPAGATION IN SINGLE-MODE OPTICAL FIBERS	179
3.4.1 Single-Channel Propagation.....	180
3.5 MULTICHANNEL PROPAGATION IN OPTICAL FIBERS.....	211
3.5.1 Cross-phase Modulation.....	213
3.5.2 Four-Wave Mixing (FWM).....	214
3.5.3 Nonlinear Schrodinger Equation for Multichannel Transmission.....	217
3.6 SIGNAL PROPAGATION IN MULTIMODE OPTICAL FIBERS	218
3.6.1 Mode Coupling in Multimode Fibers.....	219
3.6.2 Mode Coupling in Curved Multimode Optical Fibers.....	223
3.6.3 Mode Coupling in Dual-Mode Optical Fibers.....	225
3.7 SUMMARY	225
PROBLEMS.....	226
References.....	229
Chapter 4: Noise Sources and Channel Impairment	233
4.1 OPTICAL CHANNEL NOISE	233
4.1.1 Mode Partition Noise.....	236
4.1.2 Modal Noise.....	237
4.1.3 Laser Phase and Intensity Noise.....	239

4.1.4 Quantum Shot Noise.....	243
4.1.5 Dark Current Noise.....	245
4.1.6 The Thermal Noise.....	247
4.1.7 Spontaneous Emission Noise.....	248
4.1.8 Beating Components of Noise in the Optical Receiver.....	249
4.1.9 The Cross-talk Noise.....	252
4.2 DEFINITION OF BER, SNR, AND RECEIVER SENSITIVITY	254
4.2.1 Bit Error Rate and Signal-to-Noise Ratio for IM/DD Scheme.....	255
4.2.2 Optical Receiver Sensitivity.....	259
4.2.3 Optical Signal-to-Noise Ratio.....	269
4.3 SIGNAL IMPAIRMENTS	270
4.3.1 The Impact of Mode Dispersion in Multimode Fibers.....	272
4.3.2 The Impact of Chromatic Dispersion.....	273
4.3.3 Polarization Mode Dispersion Impact.....	277
4.3.4 The Impact of Nonlinear Effects on System Performance.....	279
4.3.5 The Impact of the Extinction Ratio.....	287
4.3.6 The Impact of the Intensity Noise and the Mode Partition Noise.....	289
4.3.7 The Impact of the Timing Jitter.....	292
4.3.8 The Impact of Signal Cross-talk.....	293
4.3.9 Impact of Raman Amplification to Signal Distortion.....	295
4.3.10 Impact of the Accumulated Noise.....	301
4.4 OPTICAL TRANSMISSION LINK LIMITS	306
4.4.1 Power-Budget Limited Point-to Point Lightwave Systems.....	306
4.4.2 Bandwidth-Limited Point-to Point Lightwave Systems.....	309
4.4.3 OSNR Evaluation in High-Speed Optical Transmission Systems.....	313
4.5 SUMMARY	314
PROBLEMS.....	315
References.....	319
Chapter 5: Advanced Modulation Schemes	323
5.1 SIGNAL-SPACE THEORY AND PASSBAND DIGITAL OPTICAL TRANSMISSION	323

5.1.1 Generic Optical Digital Communication System.....	323
5.1.2 Geometric Representation of Signals in Modulators and Demodulators.....	325
5.1.3 <i>M</i> -ary Baseband Pulse Amplitude Modulation (PAM).....	331
5.1.4 Passband Digital Transmission.....	334
5.1.5 Quadrature Amplitude Modulation (QAM).....	335
5.1.6 Frequency Shift Keying (FSK).....	342
5.2 MULTILEVEL MODULATION SCHEMES	343
5.2.1 I/Q and Polar Modulators.....	343
5.2.2 <i>M</i> -ary PSK Transmitters.....	347
5.2.3 Star-QAM Transmitters.....	350
5.2.4 Square/Cross QAM Transmitters.....	351
5.3 POLARIZATION-DIVISION MULTIPLEXING AND FOUR-DIMENSIONAL SIGNALING.....	356
5.4 SPACE-DIVISION MULTIPLEXING AND MULTIDIMENSIONAL HYBRID MODULATION SCHEMES.....	360
5.5 OPTIMUM SIGNAL CONSTELLATION DESIGN	365
5.6 ORTHOGONAL FREQUENCY DIVISION MULTIPLEXING (OFDM) FOR OPTICAL COMMUNICATIONS.....	369
5.6.1 Generation of OFDM Signals by Inverse Fast Fourier Transform.....	370
5.6.2 Cyclic Extension and Windowing.....	373
5.6.3 Bandwidth Efficiency of CO-OFDM.....	378
5.6.4 OFDM Signal Processing and Parallel Optical Channel Decomposition.....	379
5.6.5 Discrete Multitone (DMT) in Multimode Fiber Links.....	384
5.7 MIMO OPTICAL COMMUNICATIONS.....	389
5.7.1 Parallel Decomposition of MIMO Optical Channels.....	393
5.7.2 Space-Time Coding for MIMO Optical Channels.....	395
5.7.3 Polarization-Time Coding and MIMO-OFDM.....	398
5.8 SUMMARY	401
PROBLEMS.....	401
References.....	407

Chapter 6: Advanced Detection Schemes	413
6.1 DETECTION THEORY FUNDAMENTALS	413
6.1.1 Geometric Representation of Received Signal, and Theorem of Irrelevance	413
6.1.2 Equivalence of Euclidean, Correlation, and Matched Filter Receivers	418
6.1.3 Detection of Known Signal and Optimum Receiver Design	422
6.1.4 Error Probability in the Receiver	426
6.1.5 Estimation Theory, ML Estimation, and Cramér-Rao Bound	435
6.2 COHERENT DETECTION OF OPTICAL SIGNALS	437
6.2.1 Coherent Optical Detection Basics	438
6.2.2 Optical Hybrids and Balanced Coherent Receivers	443
6.2.3 Phase, Polarization, and Intensity Noise Sources in a Coherent Optical Detector	446
6.2.4 Homodyne Coherent Detection	449
6.2.5 Phase Diversity Homodyne Receivers	449
6.2.6 Polarization Control and Polarization Diversity in Coherent Receivers	451
6.2.7 Polarization-Division Multiplexing (PDM) and Coded Modulation	452
6.3 OPTICAL CHANNEL EQUALIZATION	454
6.3.1 ISI-Free Optical Transmission and Partial-Response Signaling	454
6.3.2 Zero-Forcing Equalizers	458
6.3.3 Optimum Linear Equalizer	463
6.3.4 Wiener Filtering	465
6.3.5 Adaptive Equalization	466
6.3.6 Decision Feedback Equalizer	468
6.3.7 MLSD or Viterbi Equalizer	469
6.3.8 Blind Equalization	471
6.3.9 Volterra Series-Based Equalization	476
6.4 DIGITAL BACKPROPAGATION	478
6.5 SYNCHRONIZATION	481
6.6 COHERENT OPTICAL OFDM DETECTION	486
6.6.1 DFT Window Synchronization	488

6.6.2 Frequency Synchronization in Optical OFDM Systems	489
6.6.3 Phase Estimation in Optical OFDM Systems	490
6.6.4 Channel Estimation in OFDM Systems	491
6.7 OPTICAL MIMO DETECTION	494
6.7.1 MIMO Model of Few-Mode Fibers	495
6.7.2 Linear and Decision-Feedback MIMO Receivers	496
6.7.3 Space-Time Coding (STC)-Based MIMO Detection Schemes	499
6.8 SUMMARY	503
PROBLEMS	503
References	509
Chapter 7: Advanced Coding Schemes	515
7.1 CHANNEL CODING PRELIMINARIES	515
7.1.1 Channel Coding Principles	516
7.1.2 Mutual Information and Channel Capacity	519
7.1.3 Channel Coding and Information Capacity Theorems	521
7.2 LINEAR BLOCK CODES	522
7.2.1 Generator Matrix	523
7.2.2 Parity-Check Matrix	524
7.2.3 Code Distance Properties	526
7.2.4 Coding Gain	527
7.2.5 Syndrome Decoding and Standard Array	528
7.2.6 Important Coding Bounds	531
7.3 CYCLIC CODES	532
7.4 BOSE-CHAUDHURI-HOCQUENGHEM (BCH) CODES	538
7.5 REED-SOLOMON CODES, CONCATENATED CODES, AND PRODUCT CODES	545
7.6 TURBO CODES	548
7.7 TURBO-PRODUCT CODES	551
7.8 LOW-DENSITY PARITY-CHECK (LDPC) CODES	553
7.8.1 Quasi-Cyclic (QC) Binary LDPC Codes	555
7.8.2 Decoding of Binary LDPC Codes and BER Performance Evaluation	557
7.8.3 Nonbinary LDPC Codes	561

7.8.4 FPGA Implementation of Decoders for Large-Girth QC-LDPC Codes	562
7.9 CODED MODULATION	563
7.9.1 Multilevel Coding and Block-Interleaved Coded Modulation	563
7.9.2 Polarization-Division Multiplexed Coded OFDM	569
7.9.3 Nonbinary LDPC-Coded Modulation	571
7.9.4 Multidimensional Coded Modulation	575
7.9.5 Adaptive Nonbinary LDPC-Coded Modulation	579
7.10 LDPC-CODED TURBO EQUALIZATION	581
7.10.1 MAP Detection	581
7.10.2 Multilevel Turbo Equalization	582
7.10.3 Multilevel Turbo Equalizer for I/Q Imbalance and Polarization Offset	588
7.10.4 Multilevel Turbo Equalization with Digital Back-Propagation	592
7.11 SUMMARY	593
PROBLEMS	594
References	604

Chapter 8: Advanced Optical Networking 609

8.1 OPTICAL NETWORKING AS PART OF THE ISO MODEL	609
8.1.1 ISO Model of Networking	609
8.1.2 Optical Network Definition and Role	612
8.1.3 Cross-Layer Interworking with Upper Layers	613
8.1.4 Electrical Client Layers	614
8.2 OPTICAL NETWORKING ELEMENTS	625
8.2.1 Optical Line Terminals	626
8.2.2 Optical Add-Drop Multiplexer (OADM)	627
8.2.3 Optical Interconnect Devices	629
8.2.4 Reconfigurable Optical Add-Drop Multiplexers (ROADM)	633
8.2.5 Optical Cross-Connect (OXC)	636
8.3 LIGHTPATH ROUTING IN OPTICAL NETWORKS	638
8.3.1 The Lightpath Topologies and Their Impact on Wavelength Routing	639
8.3.2 Modeling of Lightpath Topology	642

8.3.3 Optimizing Multihop Network Topologies	644
8.4 IMPAIRMENT AWARE ROUTING	652
8.4.1 Optical Performance Monitoring	654
8.4.2 Impairment Aware Constraints	657
8.5 CONTROL AND MANAGEMENT OF OPTICAL NETWORKS	661
8.5.1 Signaling and Resource Reservation	661
8.5.2 Routing and Wavelength Assignment	663
8.5.3 Fault Management and Network Restoration	664
8.6 CONTROL PLANE FOR AN OPTICAL NETWORK	671
8.7 OPTICAL PACKET AND BURST SWITCHING	674
8.7.1 Optical Packet Switching	675
8.7.2 Optical Burst Switching	679
8.8 OPTICAL NETWORK APPLICATION SEGMENTS	681
8.8.1 Optical Access Networks	681
8.8.2 Optical Metro Networks	689
8.8.3 Optical Core Network	690
8.8.4 Data Center Networks (DCN)	691
8.9 ADVANCED MULTIDIMENSIONAL AND DYNAMIC OPTICAL NETWORKING	693
8.10 SUMMARY	698
PROBLEMS	698
References	703

Chapter 9: Optical Channel Capacity and Energy Efficiency 709

9.1 CAPACITY OF CONTINUOUS CHANNELS	709
9.2 CAPACITY OF CHANNELS WITH MEMORY	714
9.2.1 Markov Sources and Their Entropy	714
9.2.2 McMillan Sources and Their Entropy	718
9.2.3 McMillan-Khinchin Model for Channel Capacity Evaluation	718
9.3 MODELING OF SIGNAL PROPAGATION	721
9.3.1 The Nonlinear Schrödinger Equation (NSE)	721
9.3.2 Step-Size Selection in Split-Step Fourier Algorithms	723

9.3.3 Multichannel Propagation.....	724
9.3.4 Propagation Equation for Polarization-Division Multiplexed Systems.....	724
9.4 CALCULATION OF INFORMATION CAPACITY BY FORWARD RECURSION OF THE BCJR ALGORITHM.....	725
9.5 INFORMATION CAPACITY OF SYSTEMS WITH COHERENT DETECTION.....	728
9.6 CALCULATION OF CAPACITY OF OPTICAL MIMO-OFDM SYSTEMS.....	731
9.6.1 Modeling of Few-Mode Fibers in a Strong-Coupling Regime with Mode-Dependent Loss.....	731
9.6.2 Optical MIMO-OFDM Channel Capacity.....	732
9.7 ENERGY-EFFICIENT OPTICAL TRANSMISSION.....	734
9.7.1 Energy-Efficient Signal Constellation Design Based on Concepts of Statistical Physics.....	734
9.7.2 Energy-Efficient Multidimensional Coded Modulation.....	737
9.7.3 Energy-Efficient Photonic Devices.....	739
9.8 SUMMARY.....	740
PROBLEMS.....	740
References.....	744

Chapter 10: Engineering Tool Box **749**

10.1 PHYSICAL QUANTITIES AND UNITS USED IN THIS BOOK.....	749
10.2 FREQUENCY AND WAVELENGTH OF THE OPTICAL SIGNAL.....	750
10.3 STIMULATED EMISSION OF THE LIGHT.....	751
10.4 BASIC PHYSICS OF SEMICONDUCTOR JUNCTIONS.....	753
10.5 BASIC VECTOR ANALYSIS.....	758
10.6 BESSEL FUNCTIONS.....	760
10.7 MODULATION OF AN OPTICAL SIGNAL.....	761
10.8 DIGITAL-TO-ANALOG AND ANALOG-TO-DIGITAL CONVERSION.....	762
10.9 OPTICAL RECEIVER TRANSFER FUNCTION.....	764
10.10 THE Z-TRANSFORM AND ITS APPLICATIONS.....	766
10.10.1 Bilateral z -Transform.....	766
10.10.2 Properties of z -Transform and Common z -Transform Pairs.....	768
10.10.3 The Inversion of the z -Transform.....	769

10.10.4 The System Function.....	770
10.11 ABSTRACT ALGEBRA BASICS.....	772
10.11.1 Concept of Groups.....	772
10.11.2 Concept of Fields.....	774
10.11.3 Concept of Finite Fields.....	775
10.12 PULSE-POSITION MODULATION.....	777
10.13 STOKES VECTOR AND POINCARÉ SPHERE.....	779
References.....	780
ACRONYMS	783
ABOUT THE AUTHORS	791
INDEX	793
