|---|-------------|
| Author's preface . . . . .  | v           |
| <b>Chapter 1. Basic material from linear algebra . . . . .</b>  | <b>1</b>    |
| § 1. Matrices . . . . .   | 1           |
| § 2. $n$ -Dimensional vector space . . . . .  | 23          |
| § 3. Linear transformations . . . . .   | 33          |
| § 4. The Jordan canonical form . . . . .  | 49          |
| § 5. The concept of limit for vectors and matrices . . . . .  | 54          |
| <b>Chapter 2. Systems of linear equations . . . . .</b>   | <b>63</b>   |
| § 6. Gauss's method . . . . .   | 65          |
| § 7. The evaluation of determinants . . . . .   | 72          |
| § 8. Compact arrangements for the solution of non-homogeneous linear systems . . . . .                                    | 75          |
| § 9. The connection of Gauss's method with the decomposition of a matrix into factors . . . . .                           | 79          |
| § 10. The square-root method . . . . .  | 81          |
| § 11. The inversion of a matrix . . . . .   | 85          |
| § 12. The problem of elimination . . . . .  | 90          |
| § 13. Correction of the elements of the inverse matrix . . . . .  | 99          |
| § 14. The inversion of a matrix by partitioning . . . . .   | 102         |
| § 15. The bordering method . . . . .  | 105         |
| § 16. The escalator method . . . . .  | 111         |
| § 17. The method of iteration . . . . .   | 117         |
| § 18. The preparatory conversion of a system of linear equations into form suitable for the method of iteration . . . . . | 127         |
| § 19. Seidel's method . . . . .   | 131         |
| § 20. Comparison of the methods . . . . .   | 143         |

|--|-------------|
| Chapter 3. The proper numbers and proper vectors of a matrix . . . . .                                     | 147         |
| § 21. The method of A. N. Krylov . . . . .   | 149         |
| § 22. The determination of proper vectors by the method of A. N. Krylov                                    | 159         |
| § 23. Samuelson's method . . . . .   | 161         |
| § 24. The method of A. M. Danilevsky . . . . .   | 166         |
| § 25. Leverrier's method in D. K. Faddeev's modification . . . . .   | 177         |
| § 26. The escalator method . . . . .   | 183         |
| § 27. The method of interpolation . . . . .  | 192         |
| § 28. Comparison of the methods . . . . .  | 201         |
| § 29. Determination of the first proper number of a matrix. First case .                                   | 202         |
| § 30. Improving the convergence of the iterative process . . . . .   | 211         |
| § 31. Finding the proper numbers next in line . . . . .  | 219         |
| § 32. Determination of the proper numbers next in line and their proper vectors as well . . . . .          | 222         |
| § 33. Determination of the first proper number. Second case . . . . .                                      | 234         |
| § 34. The case of a matrix with nonlinear elementary divisors . . . . .                                    | 235         |
| § 35. Improving the convergence of the iterative process for solving systems of linear equations . . . . . | 239         |
| Bibliography . . . . .   | 243         |
| Index . . . . .  | 247         |
