Preface			XI
1	From	Microscopic to Macroscopic Behavior	1
•	1.1	Introduction	1
	1.2		
		Doing Work and the Quality of Energy	2 4
		Some Simple Simulations	5
		Measuring the Pressure and Temperature	15
		Work, Heating, and the First Law of Thermodynamics	19
		*The Fundamental Need for a Statistical Approach	20
		*Time and Ensemble Averages	22
	1.9	Models of Matter	22
		1.9.1 The ideal gas	23
		1.9.2 Interparticle potentials	23
		1.9.3 Lattice models	23
	1.10	Importance of Simulations	24
		Dimensionless Quantities	24
	1.12	Summary	25
	1.13	Supplementary Notes	27
		1.13.1 Approach to equilibrium	27
		1.13.2 Mathematics refresher	28
		abulary	28
		itional Problems	29
	Sugg	estions for Further Reading	30
2	Therr	nodynamic Concepts and Processes	32
		Introduction	32
		The System	33
		Thermodynamic Equilibrium	. 34
	2.4	Temperature	35
	2.5	Pressure Equation of State	38
	2.6	Some Thermodynamic Processes	39
	2.7	Work	40
	2.8	The First Law of Thermodynamics	44
	2.9	Energy Equation of State	47

	2.10 Heat Capacities and Enthalpy	48
	2.11 Quasistatic Adiabatic Processes	51
	2.12 The Second Law of Thermodynamics	55
	2.13 The Thermodynamic Temperature	58
	2.14 The Second Law and Heat Engines	60
	2.15 Entropy Changes	67
	2.16 Equivalence of Thermodynamic and Ideal Gas Scale	
	Temperatures	74
	2.17 The Thermodynamic Pressure	75
	2.18 The Fundamental Thermodynamic Relation	76
	2.19 The Entropy of an Ideal Classical Gas	77
	2.20 The Third Law of Thermodynamics	78
	2.21 Free Energies	79
	2.22 Thermodynamic Derivatives	84
	2.23 *Applications to Irreversible Processes	90
	2.23.1 Joule or free expansion process	90
	2.23.2 Joule-Thomson process	91
	2.24 Supplementary Notes	94
	2.24.1 The mathematics of thermodynamics	94
	2.24.2 Thermodynamic potentials and Legendre transforms	97
	Vocabulary	99
	Additional Problems	100
	Suggestions for Further Reading	108
0	O COLUMN	
3	Concepts of Probability	111
3	3.1 Probability in Everyday Life	111
3	3.1 Probability in Everyday Life3.2 The Rules of Probability	111 114
3	3.1 Probability in Everyday Life3.2 The Rules of Probability3.3 Mean Values	111 114 119
3	 3.1 Probability in Everyday Life 3.2 The Rules of Probability 3.3 Mean Values 3.4 The Meaning of Probability 	111 114 119 121
3	 3.1 Probability in Everyday Life 3.2 The Rules of Probability 3.3 Mean Values 3.4 The Meaning of Probability 3.4.1 Information and uncertainty 	111 114 119 121 124
3	 3.1 Probability in Everyday Life 3.2 The Rules of Probability 3.3 Mean Values 3.4 The Meaning of Probability 3.4.1 Information and uncertainty 3.4.2 *Bayesian inference 	111 114 119 121 124 128
3	 3.1 Probability in Everyday Life 3.2 The Rules of Probability 3.3 Mean Values 3.4 The Meaning of Probability 3.4.1 Information and uncertainty 3.4.2 *Bayesian inference 3.5 Bernoulli Processes and the Binomial Distribution 	111 114 119 121 124 128 134
3	 3.1 Probability in Everyday Life 3.2 The Rules of Probability 3.3 Mean Values 3.4 The Meaning of Probability 3.4.1 Information and uncertainty 3.4.2 *Bayesian inference 3.5 Bernoulli Processes and the Binomial Distribution 3.6 Continuous Probability Distributions 	111 114 119 121 124 128
3	 3.1 Probability in Everyday Life 3.2 The Rules of Probability 3.3 Mean Values 3.4 The Meaning of Probability 3.4.1 Information and uncertainty 3.4.2 *Bayesian inference 3.5 Bernoulli Processes and the Binomial Distribution 3.6 Continuous Probability Distributions 3.7 The Central Limit Theorem (or Why Thermodynamics 	111 114 119 121 124 128 134 147
3	 3.1 Probability in Everyday Life 3.2 The Rules of Probability 3.3 Mean Values 3.4 The Meaning of Probability 3.4.1 Information and uncertainty 3.4.2 *Bayesian inference 3.5 Bernoulli Processes and the Binomial Distribution 3.6 Continuous Probability Distributions 3.7 The Central Limit Theorem (or Why Thermodynamics Is Possible) 	111 114 119 121 124 128 134 147
3	 3.1 Probability in Everyday Life 3.2 The Rules of Probability 3.3 Mean Values 3.4 The Meaning of Probability 3.4.1 Information and uncertainty 3.4.2 *Bayesian inference 3.5 Bernoulli Processes and the Binomial Distribution 3.6 Continuous Probability Distributions 3.7 The Central Limit Theorem (or Why Thermodynamics Is Possible) 3.8 *The Poisson Distribution or Should You Fly? 	111 114 119 121 124 128 134 147
3	 3.1 Probability in Everyday Life 3.2 The Rules of Probability 3.3 Mean Values 3.4 The Meaning of Probability 3.4.1 Information and uncertainty 3.4.2 *Bayesian inference 3.5 Bernoulli Processes and the Binomial Distribution 3.6 Continuous Probability Distributions 3.7 The Central Limit Theorem (or Why Thermodynamics Is Possible) 3.8 *The Poisson Distribution or Should You Fly? 3.9 *Traffic Flow and the Exponential Distribution 	111 114 119 121 124 128 134 147 151 155
3	 3.1 Probability in Everyday Life 3.2 The Rules of Probability 3.3 Mean Values 3.4 The Meaning of Probability 3.4.1 Information and uncertainty 3.4.2 *Bayesian inference 3.5 Bernoulli Processes and the Binomial Distribution 3.6 Continuous Probability Distributions 3.7 The Central Limit Theorem (or Why Thermodynamics Is Possible) 3.8 *The Poisson Distribution or Should You Fly? 3.9 *Traffic Flow and the Exponential Distribution 3.10 *Are All Probability Distributions Gaussian? 	111 114 119 121 124 128 134 147 151 155 156 159
3	 3.1 Probability in Everyday Life 3.2 The Rules of Probability 3.3 Mean Values 3.4 The Meaning of Probability 3.4.1 Information and uncertainty 3.4.2 *Bayesian inference 3.5 Bernoulli Processes and the Binomial Distribution 3.6 Continuous Probability Distributions 3.7 The Central Limit Theorem (or Why Thermodynamics Is Possible) 3.8 *The Poisson Distribution or Should You Fly? 3.9 *Traffic Flow and the Exponential Distribution 3.10 *Are All Probability Distributions Gaussian? 3.11 Supplementary Notes 	111 114 119 121 124 128 134 147 151 155 156 159 161
3	 3.1 Probability in Everyday Life 3.2 The Rules of Probability 3.3 Mean Values 3.4 The Meaning of Probability 3.4.1 Information and uncertainty 3.4.2 *Bayesian inference 3.5 Bernoulli Processes and the Binomial Distribution 3.6 Continuous Probability Distributions 3.7 The Central Limit Theorem (or Why Thermodynamics Is Possible) 3.8 *The Poisson Distribution or Should You Fly? 3.9 *Traffic Flow and the Exponential Distribution 3.10 *Are All Probability Distributions Gaussian? 3.11 Supplementary Notes 3.11.1 Method of undetermined multipliers 	111 114 119 121 124 128 134 147 151 155 156 159 161

4.2	A Simple Example of a Thermal Interaction	182
4.3	Counting Microstates	192
	4.3.1 Noninteracting spins	192
	4.3.2 A particle in a one-dimensional box	193
	4.3.3 One-dimensional harmonic oscillator	196
	4.3.4 One particle in a two-dimensional box	197
	4.3.5 One particle in a three-dimensional box	198
	4.3.6 Two noninteracting identical particles and the	
	semiclassical limit	199
4.4	The Number of States of Many Noninteracting Particles:	
	Semiclassical Limit	201
4.5	The Microcanonical Ensemble (Fixed E, V, and N)	203
4.6	The Canonical Ensemble (Fixed T, V, and N)	209
4.7	Connection between Thermodynamics and Statistical Mechanics	
	in the Canonical Ensemble	216
4.8	Simple Applications of the Canonical Ensemble	218
	An Ideal Thermometer	222
4.10	Simulation of the Microcanonical Ensemble	225
4.11	Simulation of the Canonical Ensemble	226
4.12	Grand Canonical Ensemble (Fixed T , V , and μ)	227
	*Entropy Is Not a Measure of Disorder	229
	Supplementary Notes	231
	4.14.1 The volume of a hypersphere	231
	4.14.2 Fluctuations in the canonical ensemble	232
Voca	abulary	233
	itional Problems	234
	estions for Further Reading	239
Magn	netic Systems	241
5.1	Paramagnetism	241
5.2	Noninteracting Magnetic Moments	242
	Thermodynamics of Magnetism	246
	The Ising Model	248
5.5	The Ising Chain	249
	5.5.1 Exact enumeration	250
	5.5.2 Spin-spin correlation function	253
	5.5.3 Simulations of the Ising chain	256
	5.5.4 *Transfer matrix	257
	5.5.5 Absence of a phase transition in one dimension	260
5.6	The Two-Dimensional Ising Model	261
	5.6.1 Onsager solution	262
	5.6.2 Computer simulation of the two-dimensional Ising model	267
5.7	Mean-Field Theory	270
	5.7.1 *Phase diagram of the Ising model	276
5.8	*Simulation of the Density of States	279
5.9		282
	Supplementary Notes	286

496

A.2 Hyperbolic Functions

	5.10.1 The Heisenberg model of magnetism	286
	5.10.2 Low temperature expansion	288
	5.10.3 High temperature expansion	290
	5.10.4 Bethe approximation	292
	5.10.5 Fully connected Ising model	295
	5.10.6 Metastability and nucleation	297
Voca	abulary	300
	itional Problems	300
Sugg	gestions for Further Reading	306
Many	r-Particle Systems	308
6.1	•	308
6.2	Classical Statistical Mechanics	318
	6.2.1 The equipartition theorem	318
	6.2.2 The Maxwell velocity distribution	321
	6.2.3 The Maxwell speed distribution	323
6.3	Occupation Numbers and Bose and Fermi Statistics	325
6.4	Distribution Functions of Ideal Bose and Fermi Gases	327
6.5	Single Particle Density of States	329
	6.5.1 Photons	331
	6.5.2 Nonrelativistic particles	332
6.6	The Equation of State of an Ideal Classical Gas: Application	
	of the Grand Canonical Ensemble	334
6.7	Blackbody Radiation	337
6.8	The Ideal Fermi Gas	341
	6.8.1 Ground state properties	342
	6.8.2 Low temperature properties	345
6.9	The Heat Capacity of a Crystalline Solid	351
	6.9.1 The Einstein model	351
	6.9.2 Debye theory	352
	The Ideal Bose Gas and Bose Condensation	354
6.11	Supplementary Notes	360
	6.11.1 Fluctuations in the number of particles	360
	6.11.2 Low temperature expansion of an ideal Fermi gas	363
	abulary	365
	itional Problems	366
Sugg	gestions for Further Reading	374
The (Chemical Potential and Phase Equilibria	376
7.1	Meaning of the Chemical Potential	376
7.2	Measuring the Chemical Potential in Simulations	380
	7.2.1 The Widom insertion method	380
	7.2.2 The chemical demon algorithm	382
7.3	Phase Equilibria	385
	7.3.1 Equilibrium conditions	386
	7.3.2 Simple phase diagrams	387
	7.3.3 Clausius-Clapeyron equation	389
