

# Contents

Unmarked sections are the basic part of the book; those labelled with an asterisk contain details that may be omitted upon a first reading. Sections and chapters marked with a dagger are elementary introductions to advanced topics that are somewhat outside the book's main line of development.

## PART I

<b>1</b>	<b>Basics in field quantization</b>	
1.1	Review of canonical quantization formalism	4
1.2	Introduction to path integral formalism	11
1.3*	Fermion field quantization	22
<b>2</b>	<b>Introduction to renormalization theory</b>	
2.1	Conventional renormalization in $\lambda\phi^4$ theory	31
2.2	BPH renormalization in $\lambda\phi^4$ theory	39
2.3	Regularization schemes	45
2.4	Power counting and renormalizability	56
<b>3</b>	<b>Renormalization group</b>	
3.1	Momentum subtraction schemes and the Callan–Symanzik equation	67
3.2*	The minimal subtraction scheme and its renormalization-group equation	77
3.3	Effective coupling constants	81
<b>4</b>	<b>Group theory and the quark model</b>	
4.1	Elements of group theory	86
4.2	SU(2) and SU(3)	90
4.3	The tensor method in SU( $n$ )	102
4.4	The quark model	113
<b>5</b>	<b>Chiral symmetry of the strong interaction</b>	
5.1	Global symmetries in field theory and current commutators	126
5.2*	Symmetry currents as physical currents	134
5.3	Spontaneous breaking of global symmetry, the Goldstone theorem	141
5.4*	PCAC and soft pion theorems	151
5.5*	Pattern of chiral symmetry breaking	160

	<i>Contents</i>
<b>6 Renormalization and symmetry</b>	169
6.1* The vector-current Ward identity and renormalization	173
6.2* Axial-vector-current Ward identity anomaly and $\pi^0 \rightarrow 2\gamma$	182
6.3† Renormalization in theories with spontaneous symmetry breaking	189
6.4† The effective potential and radiatively induced spontaneous symmetry breakdown	199
<b>7 The Parton model and scaling</b>	208
7.1 The parton model of deep inelastic lepton-hadron scattering	218
7.2 Sum rules and applications of the quark-parton model	229
7.3 Free-field light-cone singularities and Bjorken scaling	235
<b>PART II</b>	
<b>8 Gauge symmetries</b>	240
8.1 Local symmetries in field theory	248
8.2* Gauge invariance and geometry	257
8.3 Spontaneous breaking of gauge symmetry, the Higgs phenomenon	267
<b>9 Quantum gauge theories</b>	280
9.1 Path-integral quantization of gauge theories	291
9.2 Feynman rules in covariant gauges	295
9.3* The Slavnov-Taylor identities	311
<b>10 Quantum chromodynamics</b>	322
10.1* The discovery of asymptotic freedom	329
10.2 The QCD Lagrangian and the symmetries of the strong interaction	336
10.3 Renormalization group analysis of scaling and scaling violation	339
10.4* The parton model and perturbative QCD	355
10.5† Lattice gauge theory and colour confinement	364
<b>11 Standard electroweak theory I: basic structure</b>	371
11.1 Weak interactions before gauge theories	379
11.2 Construction of the standard $SU(2) \times U(1)$ theory	386
11.3 Fermion family replication	394
<b>12 Standard electroweak theory II: phenomenological implications</b>	394
12.1 Flavour-conserving neutral-current processes	371
12.2 Weak mixing angles, the GIM mechanism, and CP violation	386
12.3 The W and Z intermediate vector bosons	394
12.4 The Higgs particle	401
<b>13 Selected topics in quantum flavourdynamics</b>	409
13.1† Dynamical symmetry breaking and technicolour models	420
13.2* Neutrino masses, mixings and oscillations	420
13.3* $\mu \rightarrow e\gamma$ , An example of $R_\xi$ gauge loop calculations	420

<b>14 Grand unification</b>	428
14.1 Introduction to the $SU(5)$ model	434
14.2 Spontaneous symmetry breaking and gauge hierarchy	437
14.3 Coupling constant unification	442
14.4 Proton decay and baryon asymmetry in the universe	447
14.5 Fermion masses and mixing angles in the minimal $SU(5)$ model	453
<b>15 † Magnetic monopoles</b>	460
15.1 Dirac's theory of magnetic poles	466
15.2 Solitons in field theory	466
15.3 The 't Hooft-Polyakov monopole	476
<b>16 † Instantons</b>	482
16.1 The topology of gauge transformations	487
16.2 The instanton and vacuum tunnelling	487
16.3 Instantons and the $U(1)$ problem	494
<b>Appendix A Notations and conventions</b>	498
<b>Appendix B Feynman rules</b>	513
<b>Bibliography</b>	517
<b>References</b>	527
<b>Subject Index</b>	527
