Preface to the First Edition v
Preface vii
Acknowledgments ix

| Section | on I: For Students of Diagnostic Radiology, Nuclear Medicine, and Radiatio                             | n Oncology |
|---------|--------------------------------------------------------------------------------------------------------|------------|
| 1       | Physics and Chemistry of Radiation Absorption                                                          | 3          |
| 2       | Molecular Mechanisms of DNA and Chromosome<br>Damage and Repair                                        | 12         |
| 3       | Cell Survival Curves                                                                                   | 35         |
| 4       | Radiosensitivity and Cell Age in the Mitotic Cycle                                                     | 54         |
| 5.      | Fractionated Radiation and the Dose-Rate Effect                                                        | 67         |
| 6       | Oxygen Effect and Reoxygenation                                                                        | 86         |
| 7       | Linear Energy Transfer and Relative Biologic<br>Effectiveness                                          | 104        |
| 8       | Acute Radiation Syndrome                                                                               | 114        |
| 9       | Radioprotectors                                                                                        | 129        |
| 10      | Radiation Carcinogenesis                                                                               | 135        |
| 11      | Heritable Effects of Radiation                                                                         | 159        |
| 12      | Effects of Radiation on the Embryo and Fetus                                                           | 174        |
| 13      | Radiation Cataractogenesis                                                                             | 188        |
| 14      | Radiologic Terrorism                                                                                   | 193        |
| 15      | Molecular Imaging                                                                                      | 201        |
| 16      | Doses and Risks in Diagnostic Radiology, Interventional Radiology and Cardiology, and Nuclear Medicine | 222        |
| 17      | Radiation Protection                                                                                   | 253        |
| Section | on II: For Students of Radiation Oncology                                                              |            |
| 18      | Cancer Biology                                                                                         | 273        |
| 19      | Dose–Response Relationships for Model Normal Tissues                                                   | 303        |
| 20      | Clinical Response of Normal Tissues                                                                    | 327        |
| 21      | Model Tumor Systems                                                                                    | 356        |
| 22      | Cell, Tissue, and Tumor Kinetics                                                                       | 372        |
| 23      | Time, Dose, and Fractionation in Radiotherapy                                                          | 391        |
| 24      | Retreatment after Radiotherapy: The Possibilities and the Perils                                       | 412        |

## 25 Alternative Radiation Modalities 419 26 The Biology and Exploitation of Tumor Hypoxia 432 27 Chemotherapeutic Agents from the Perspective of the Radiation Biologist 448 28 Hyperthermia 490
