List of Contributors	xi
Foreword	xiii
Preface	xvii
<b>1 The Unique Nature of Glass</b>	<b>1</b>
<i>Alexis G. Clare</i>	
1.1 What is Glass?	1
1.2 Making Glass	5
1.3 Homogeneity and Phase Separation	8
1.4 Forming	9
1.5 Glasses that are not "Melted"	10
1.6 Exotic Glass	11
1.7 Summary	11
Further Reading	12
<b>2 Melt-Derived Bioactive Glass</b>	<b>13</b>
<i>Matthew D. O'Donnell</i>	
2.1 Bioglass	13
2.1.1 Introduction to Bioglass	13
2.1.2 The Materials Properties of Bioglass	15
2.1.3 Mechanism of Bioactivity and Effect of Glass Composition	15
2.2 Network Connectivity and Bioactivity	18

2.3	Alternative Bioactive Glass Compositions	19
2.4	<i>In Vitro</i> Studies	22
2.5	<i>In Vivo</i> Studies and Commercial Products	22
2.5.1	Animal Studies	22
2.5.2	Human Clinical Studies and Commercial Products	24
	References	26
3	Sol-Gel Derived Glasses for Medicine	29
	<i>Julian R. Jones</i>	
3.1	Introduction	29
3.2	Why Use the Sol-Gel Process?	30
3.3	Sol-Gel Process Principles	31
3.4	Steps in a Typical Sol-Gel Process	32
3.4.1	Stage 1: Mixing	33
3.4.2	Stage 2: Casting	34
3.4.3	Stage 3: Gelation	34
3.4.4	Stage 4: Ageing	34
3.4.5	Stage 5: Drying	35
3.4.6	Stage 6: Stabilisation	35
3.4.7	Stage 7: Densification	35
3.5	Evolution of Nanoporosity	36
3.6	Making Sol-Gel Monoliths	37
3.7	Making Particles	38
3.8	Sol-Gel Derived Bioactive Glasses	40
3.9	Summary	42
	References	43
4	Phosphate Glasses	45
	<i>Delia S. Brauer</i>	
4.1	Introduction	45
4.2	Making Phosphate Glasses	46
4.3	Phosphate Glass Structure	46
4.4	Temperature Behaviour and Crystallisation	50
4.5	Phosphate Glass Dissolution	56
4.6	Cell Compatibility of Glasses	58
4.7	Phosphate Glass Fibres and Composites	60
4.8	Applications	62
4.9	Summary	63
	References	63

5	The Structure of Bioactive Glasses and Their Surfaces	65
	<i>Alastair N. Cormack</i>	
5.1	Structure of Glasses	65
5.2	Structure of Bioactive Glasses	68
5.3	Computer Modeling (Theoretical Simulation) of Bioactive Glasses	69
5.4	Glass Surfaces	72
5.5	Summary	74
	References	74
6	Bioactive Borate Glasses	75
	<i>Steven B. Jung</i>	
6.1	Introduction	75
6.2	What Differentiates a Bioactive Borate Glass from Other Bioactive Glasses?	76
6.3	Evaluating Reactive Materials ( <i>In Vitro</i> Versus <i>In Vivo</i> Testing)	79
6.4	Multifunctional Bioactive Borate Glasses	81
6.5	Applications of Bioactive Borate Glasses in Orthopedics and Dental Regeneration	84
6.6	Soft Tissue Wound Healing	86
6.7	Tissue/Vessel Guidance	90
6.8	Drug Delivery	91
6.9	Commercial Product Design	92
6.10	Summary	94
	References	94
7	Glass-Ceramics	97
	<i>Wolfram Höland</i>	
7.1	Glass-Ceramics and Their Uses	97
7.2	Methods Used for the Controlled Crystallization of Glasses	99
7.3	A Glass-Ceramic that Hardly Expands When Heated	101
7.4	High-Strength, Moldable Glass-Ceramics for Dental Restoration	102
7.5	Glass-Ceramics that are Moldable and Machinable	104
7.6	Outlook	104
	References	105

<b>8 Bioactive Glass and Glass-Ceramic Coatings</b>	<b>107</b>
<i>Enrica Verné</i>	
8.1 Introduction	107
8.2 Enameling	108
8.3 Glazing	112
8.4 Plasma Spraying	115
8.5 Radiofrequency Magnetron Sputtering Deposition	117
8.6 Pulsed Laser Deposition	117
8.7 Summary	118
References	118
<b>9 Composites Containing Bioactive Glass</b>	<b>121</b>
<i>Aldo R. Boccaccini, Julian R. Jones, and Qi-Zhi Chen</i>	
9.1 Introduction	121
9.2 Biodegradable Polymers	125
9.2.1 Natural Polymers	125
9.2.2 Synthetic Polymers	126
9.3 Composite Scaffolds Containing Bioactive Glass	129
9.4 Processing Technologies for Porous Bioactive Composites	131
9.4.1 Thermally Induced Phase Separation	133
9.4.2 Solid Freeform Fabrication/Rapid Prototyping	134
9.4.3 Other Processing Routes	136
9.5 Case Study: the PDLA-Bioglass Composite Scaffold System	136
9.6 Final Remarks	137
References	138
<b>10 Inorganic-Organic Sol-Gel Hybrids</b>	<b>139</b>
<i>Yuki Shirosaki, Akiyoshi Osaka, Kanji Tsuru, and Satoshi Hayakawa</i>	
10.1 Introduction	139
10.2 Hybrids in Medicine and Why They Should Be Silica-Based	140
10.3 Self-Assembled Hybrid Films and Layers of Grafted Silanes	143
10.4 Sol-Gel Hybrids	144
10.5 Ormosils	146

10.6 Polymer Choice and Property Control in Hybrids	149
10.6.1 Silica/Gelatin	151
10.7 Maintaining Bioactivity in Sol-Gel Hybrids	152
10.7.1 Calcium Incorporation in Sol-Gel Hybrids	153
10.7.2 Calcium-Containing Ormosils	154
10.7.3 Ormotites	154
10.7.4 Hybrids from Vinylsilanes or Other Bifunctional Silanes	155
10.8 Summary and Outlook	156
Further Reading	156
<b>11 Dental Applications of Glasses</b>	<b>159</b>
<i>Leena Hupa and Antti Yli-Urpo</i>	
11.1 Introduction	159
11.2 Structure of the Human Tooth	160
11.3 Glass Bioactivity and Teeth	161
11.4 Bioactive Glass in Dental Bone Regeneration	164
11.5 Treatment of Hypersensitive Teeth	166
11.6 Bioactive Glass Coating on Metal Implants	167
11.7 Antimicrobial Properties of Bioactive Glasses	170
11.8 Bioactive Glasses in Polymer Composites	171
11.9 Bioactive Glasses in Glass Ionomer Cements	172
11.10 Summary	173
References	173
<b>12 Bioactive Glass as Synthetic Bone Grafts and Scaffolds for Tissue Engineering</b>	<b>177</b>
<i>Julian R. Jones</i>	
12.1 Introduction	177
12.2 Synthetic Bone Grafts and Regenerative Medicine	179
12.3 Design Criteria for an Ideal Synthetic Bone Graft	181
12.4 Bioglass and the Complication of Crystallisation During Sintering	182
12.5 Making Porous Glasses	183
12.5.1 Space Holder Method	183
12.5.2 Polymer Foam Replication	185
12.5.3 Direct Foaming	187
12.5.4 Gel-Cast Foaming	187
12.5.5 Sol-Gel Foaming Process	190

12.5.6	Solid Freeform Fabrication	193
12.5.7	Summary of Bioactive Glass Scaffold Processing	194
12.6	The Future: Porous Hybrids	194
12.7	Bioactive Glasses and Tissue Engineering	198
12.8	Regulatory Issues	199
12.9	Summary	200
	Further Reading	200
<b>13</b>	<b>Glasses for Radiotherapy</b>	<b>203</b>
	<i>Delbert E. Day</i>	
13.1	Introduction	203
13.2	Glass Design and Synthesis	206
13.3	Non-Degradable or Bio-inert Glasses: Rare Earth Aluminosilicate Glasses	206
	13.3.1 Preparation	207
	13.3.2 Properties	208
13.4	Biodegradable Glasses: Rare Earth Borate/Borosilicate Glasses	209
13.5	Design of Radioactive Glass Microspheres for <i>In Vivo</i> Applications	211
	13.5.1 Glass Particle Shape	211
	13.5.2 Useful Radioisotopes	212
	13.5.3 Radiation Dose	212
	13.5.4 Tumor Response and Tailoring of Glass Composition	213
13.6	Treatment of Liver Cancer: Hepatocellular Carcinoma	215
13.7	Treatment of Kidney Cancer: Renal Cell Carcinoma	220
13.8	Treatment of Rheumatoid Arthritis: Radiation Synovectomy	221
13.9	Summary	225
	References	226
