<i>Preface to the first edition</i>	<i>page xi</i>
<i>Preface to the second edition</i>	<i>xiii</i>
1 Cosmic rays	1
1.1 What are cosmic rays?	1
1.2 Objective of this book	1
1.3 Types of cosmic ray experiment	3
1.4 Composition of cosmic rays	6
1.5 Energy spectra	7
1.6 Energy density of cosmic rays	10
2 Cosmic ray data	12
2.1 Lessons from the heliosphere	13
2.2 Measurements with spectrometers	17
2.3 Measurements with calorimeters	20
2.4 Spectrum of all nucleons	22
2.5 Indirect measurements at high energy	23
2.6 Primary composition from air shower experiments	28
3 Particle physics	30
3.1 Historical relation of cosmic ray and particle physics	30
3.2 The Standard Model of particle physics	32
3.3 Quark model of hadrons and hadron masses	41
3.4 Oscillation of neutral mesons	45
3.5 Electron–positron annihilation	47
3.6 Weak decays	49
3.7 QCD-improved parton model and high- p_{\perp} processes	52
3.8 Concepts for describing low- p_{\perp} processes	60

4	Hadronic interactions and accelerator data	65
4.1	Basics	65
4.2	Total and elastic cross sections	72
4.3	Phenomenology of particle production	84
4.4	Nuclear targets and projectiles	97
4.5	Hadronic interaction of photons	101
4.6	Extrapolation to very high energy	105
5	Cascade equations	107
5.1	Basic equation and boundary conditions	107
5.2	Boundary conditions	109
5.3	Energy loss by charged particles	110
5.4	Electrons, positrons and photons	111
5.5	Nucleons in the atmosphere	116
5.6	Hadrons in the atmosphere	119
5.7	The atmosphere	121
5.8	Meson fluxes	122
6	Atmospheric muons and neutrinos	126
6.1	Meson decay	126
6.2	Production of muons and muon neutrinos	129
6.3	Muons in the atmosphere	133
6.4	Relation to primary energy	135
6.5	Muon charge ratio	137
6.6	Neutrinos in the atmosphere	140
6.7	Non-power law primary spectrum and scaling violations	147
7	Neutrino masses and oscillations	149
7.1	Neutrino mixing	149
7.2	Oscillation in vacuum	153
7.3	Oscillation in matter	157
7.4	Neutrino mass hierarchy	159
7.5	Oscillation over astronomical distances	160
8	Muons and neutrinos underground	163
8.1	Passage of muons through matter	164
8.2	Atmospheric muons underground	166
8.3	Neutrinos underground	170
8.4	Prompt leptons	179
8.5	Seasonal variation of atmospheric muons and neutrinos	183

9	Cosmic rays in the Galaxy	186
9.1	Cosmic ray transport in the Galaxy	187
9.2	The Galaxy	189
9.3	Models of propagation	191
10	Extragalactic propagation of cosmic rays	204
10.1	Energy loss for protons and neutrons	205
10.2	Photodisintegration of nuclei	210
10.3	Secondary particle production	212
10.4	The role of magnetic fields	217
11	Astrophysical γ-rays and neutrinos	220
11.1	γ -rays from decay of π^0	220
11.2	Production of gamma rays by electron bremsstrahlung	224
11.3	Diffuse γ -rays from the Galactic plane	225
11.4	Neutrinos from the Galactic plane	228
11.5	Spectrum of electrons	230
11.6	Positrons	231
11.7	Cosmic rays and γ -rays in external galaxies	233
12	Acceleration	236
12.1	Power	237
12.2	Shock acceleration	237
12.3	Acceleration at supernova blast waves	243
12.4	Nonlinear shock acceleration	246
12.5	The knee of the cosmic ray spectrum	254
12.6	Acceleration to higher energy	255
13	Supernovae in the Milky Way	258
13.1	The Milky Way galaxy	258
13.2	Supernovae	263
13.3	The compact remnant: neutron stars and black holes	267
13.4	High-energy binary systems	270
13.5	Supernova remnants	271
13.6	Pulsar wind nebulae	278
13.7	Examples of supernova remnants	279
14	Astrophysical accelerators and beam dumps	282
14.1	Radiative processes in beam dumps	282
14.2	Active galactic nuclei	289
14.3	Gamma ray bursts	295

15	Electromagnetic cascades	302
15.1	Basic features of cascades	302
15.2	Analytic solutions in cascade theory	304
15.3	Approximations for total number of particles	309
15.4	Fluctuations	310
15.5	Lateral spread	311
16	Extensive air showers	313
16.1	Basic features of air showers	313
16.2	The Heitler–Matthews splitting model	315
16.3	Muons in air showers	316
16.4	Nuclei and the superposition model	320
16.5	Elongation rate theorem	323
16.6	Shower universality and cross section measurement	324
16.7	Particle detector arrays	326
16.8	Atmospheric Cherenkov light detectors	330
16.9	Fluorescence telescopes	334
16.10	Radio signal detection	337
17	Very high energy cosmic rays	341
17.1	The knee of the spectrum	342
17.2	Depth of shower maximum and composition	345
17.3	Ultra-high-energy cosmic rays	348
17.4	Sources of extragalactic cosmic rays	351
17.5	Future experiments	355
18	Neutrino astronomy	356
18.1	Motivation for a kilometer-scale neutrino telescope	357
18.2	From DUMAND to IceCube and beyond	358
18.3	Signals and backgrounds in a neutrino detector	359
18.4	Event types	362
18.5	Searching for point sources of neutrinos	363
18.6	Observation of astrophysical neutrinos	365
18.7	Sources of astrophysical neutrinos	368
18.8	Multi-messenger astronomy	372
Appendix		374
A.1	Units, constants and definitions	374
A.2	References to flux measurements	374
A.3	Particle flux, density and interaction cross section	375
A.4	Fundamentals of scattering theory	378

A.5	Regge amplitude	384
A.6	Glauber model of nuclear cross sections	386
A.7	Earth's atmosphere	390
A.8	Longitudinal development of air showers	391
A.9	Secondary positrons and electrons	393
A.10	Liouville's theorem and cosmic ray propagation	395
A.11	Cosmology and distance measures	397
A.12	The Hillas splitting algorithm	399
