<b>1</b>	<b>Errors in the physical sciences</b>	<b>1</b>
1.1	The importance of error analysis	1
1.2	Uncertainties in measurement	2
1.2.1	Terminology	3
1.2.2	Random errors	3
1.2.3	Systematic errors	4
1.2.4	Mistakes	4
1.3	Precision of measurements	5
1.3.1	Precision of an analogue device	5
1.3.2	Precision of a digital device	6
1.4	Accuracy of measurements	6
	Chapter summary	7
<b>2</b>	<b>Random errors in measurements</b>	<b>9</b>
2.1	Analysing distributions: some statistical ideas	9
2.2	The mean	9
2.3	The width of the distribution: estimating the precision	10
2.3.1	Rough-and-ready approach to estimating the width	10
2.3.2	Statistical approach to estimating the width	11
2.4	Continuous distributions	12
2.5	The normal distribution	13
2.6	Sample and parent distribution	13
2.7	The standard error	14
2.7.1	The error in the error	16
2.8	Reporting results	17
2.8.1	Rounding and significant figures	18
2.9	The five golden rules	19
	Chapter summary	19
	Exercises	20
<b>3</b>	<b>Uncertainties as probabilities</b>	<b>23</b>
3.1	Distributions and probability	23
3.2	The Gaussian probability distribution function	24
3.2.1	Probability calculations	24
3.2.2	Worked example—the error function	25
3.3	Confidence limits and error bars	25
3.3.1	Extended ranges	26
3.3.2	Rejecting outliers	26

3.3.3	Experimental example of a Gaussian distribution	27
3.3.4	Comparing experimental results with an accepted value	28
3.4	Poisson probability function for discrete events	28
3.4.1	Worked example—Poisson counts	29
3.4.2	Error bars and confidence limits for Poisson statistics	30
3.4.3	Approximations for high means	30
3.5	The central limit theorem	31
3.5.1	Examples of the central limit theorem	33
	Chapter summary	34
	Exercises	35
<b>4</b>	<b>Error propagation</b>	<b>37</b>
4.1	Propagating the error in a single-variable function	37
4.1.1	The functional approach for single-variable functions	38
4.1.2	A calculus-based approximation for single-variable functions	38
4.1.3	Look-up table for common single-variable functions	39
4.1.4	Worked example—single variable function	39
4.2	Propagating the error through a multi-variable function	40
4.2.1	The functional approach for multi-variable functions	41
4.2.2	Worked example—functional approach for multi-variable functions	42
4.2.3	A calculus approximation for multi-variable functions	43
4.2.4	A look-up table for multi-variable functions	43
4.2.5	Comparison of methods	44
4.2.6	Percentage errors—dominant error	45
4.2.7	Using the look-up tables	45
4.2.8	Using the look-up tables—health warning	46
4.3	Propagating errors in functions—a summary	47
4.4	Experimental strategy based on error analysis	47
4.4.1	Experimental strategy for reducing the dominant error	49
4.5	Combined experiments—the weighted mean	49
4.5.1	The error in the mean—a special case of the weighted mean	50
	Chapter summary	51
	Exercises	51
<b>5</b>	<b>Data visualisation and reduction</b>	<b>53</b>
5.1	Producing a good graph	53
5.1.1	The independent and dependent variables	54
5.1.2	Linearising the data	54
5.1.3	Appropriate scales for the axes	54
5.1.4	Labelling the axes	54
5.1.5	Adding data points and error bars to graphs	55
5.1.6	Adding a fit or trend line	56
5.1.7	Adding a title or caption	57

5.2	Using a graph to see trends in the data	57
5.2.1	Adding a linear trend line	57
5.2.2	Interpolating, extrapolating and aliasing	59
5.3	Introduction to the method of least squares and maximum likelihood	59
5.3.1	Example using the method of least squares	61
5.4	Performing a least-squares fit to a straight line	61
5.5	Using graphs to estimate random and systematic errors	62
5.6	Residuals	63
	Chapter summary	64
	Exercises	64
<b>6</b>	<b>Least-squares fitting of complex functions</b>	<b>67</b>
6.1	The importance of $\chi^2$ in least-squares fitting	67
6.1.1	$\chi^2$ for data with Poisson errors	68
6.2	Non-uniform error bars	68
6.3	A least-squares fit to a straight line with non-uniform error bars	69
6.3.1	Strategies for a straight-line fit	71
6.3.2	Analysis of residuals with non-uniform error bars	72
6.4	Performing a weighted least-squares fit—beyond straight lines	72
6.4.1	Least-squares fit to an $n^{\text{th}}$ -order polynomial	72
6.4.2	Least-squares fit to an arbitrary nonlinear function	72
6.5	Calculating the errors in a least-squares fit	74
6.5.1	The error surface	74
6.5.2	Confidence limits on parameters from weighted least-squares fit	75
6.5.3	Worked example 1—a two-parameter fit	77
6.5.4	Worked example 2—a multi-parameter fit	79
6.6	Fitting with constraints	79
6.7	Testing the fit using the residuals	81
	Chapter summary	82
	Exercises	83
<b>7</b>	<b>Computer minimisation and the error matrix</b>	<b>85</b>
7.1	How do fitting programs minimise?	85
7.1.1	Iterative approaches	86
7.1.2	Grid search	86
7.1.3	The gradient-descent method	87
7.1.4	Second-order expansion: the Newton method	88
7.1.5	Second-order expansion: the Gauss–Newton method	89
7.1.6	The Marquardt–Levenberg method	90
7.2	The covariance matrix and uncertainties in fit parameters	92
7.2.1	Extracting uncertainties in fit parameters	92
7.2.2	Curvature matrix for a straight-line fit	93
7.2.3	Scaling the uncertainties	93

7.3	Correlations among uncertainties of fit parameters	93
7.3.1	Correlation coefficients—off-diagonal elements of the covariance matrix	93
7.4	Covariance in error propagation	95
7.4.1	Worked example 1—a straight-line fit	95
7.4.2	Worked example 2—a four-parameter fit	96
	Chapter summary	97
	Exercises	97
<b>8</b>	<b>Hypothesis testing—how good are our models?</b>	<b>101</b>
8.1	Hypothesis testing	101
8.2	Degrees of freedom	102
8.2.1	Data reduction and the number of degrees of freedom	103
8.3	The $\chi^2$ probability distribution function	104
8.3.1	$\chi^2$ for one degree of freedom	105
8.4	Using $\chi^2$ as a hypothesis test	105
8.4.1	The reduced $\chi^2$ statistic	107
8.4.2	Testing the null hypothesis—a summary	108
8.5	Testing the quality of a fit using $\chi^2$	108
8.5.1	Worked example 1—testing the quality of a fit	109
8.5.2	Worked example 2—testing different models to a data set	109
8.5.3	What constitutes a good fit?	110
8.6	Testing distributions using $\chi^2$	111
8.6.1	Worked example 3—testing a discrete distribution	112
8.6.2	Worked example 4—testing a continuous distribution	113
8.7	Occam's razor	114
8.8	Student's $t$ -distribution	115
8.9	Scaling uncertainties	115
8.10	Summary of fitting experimental data to a theoretical model	116
	Chapter summary	117
	Exercises	118
<b>9</b>	<b>Topics for further study</b>	<b>121</b>
9.1	Least-squares fitting with uncertainties in both variables	121
9.1.1	Fitting to a straight line	121
9.1.2	Fitting to a more general function	122
9.1.3	Orthogonal distance regression	122
9.2	More complex error surfaces	123
9.2.1	Simulated annealing	123
9.2.2	Genetic algorithms	124
9.3	Monte Carlo methods	125
9.3.1	Introduction to Monte Carlo methods	125
9.3.2	Testing distributions with Monte Carlo methods	125
9.4	Bootstrap methods	126

9.5 Bayesian inference	127
9.6 GUM—Guide to the Expression of Uncertainty in Measurement	129
