

CONTENTS

Introduction

Objectives of the Physics Laboratory	1
Laboratory Notebook	2
Error Analysis	5
Types of Experimental Errors	5
Statistical Analysis of Random Errors	6
Normal or Gauss Distribution	8
Review Exercises	10
Estimation of Random Error	11
Propagation of Errors	11
Significant Figures	18
Handling of Significant Figures in Calculations	19
Review Exercises	19
Graphical Analysis	21
Plotting Data on Semilog Paper	26
Plotting Data on Log-Log Paper	28
Least Squares Fit	31
Graphical Exercises	32
Responsibility of the Experimentalist	33

Experiments

1. Darts and Statistics	35
2. Simple Pendulum	39
3. One-Dimensional Motion	43

4. Two-Dimensional Motion	49
5. Conservation of Mechanical Energy	55
6. One-Dimensional Collisions	63
7. Rotational Dynamics. Boomerang, Bicycle	69
8. Simple Harmonic Motion. Damping	79
9. Two Coupled Oscillators. Normal Modes, Resonance	87
10. Oscillations in Continuous Systems - String, Air. Resonance	97
11. Motion of Fluids. Poiseuille's Law, Drag Force	103
12. Temperature	111
13. The Oscilloscope	117
14. Voltage, Current, and Resistance Measurements. DC and AC	129
15. AC Behavior of Resistors, Capacitors, and Inductors	137
16. RLC Circuits. Damped Oscillations, Driven Oscillations, Filtering	145
17. Input and Output Resistances. Resistance Matching	153
18. Semiconductor Diodes. DC Power Supply	159
19. Black Boxes	167
20. Transistor. AC Amplifier	169
21. Integrated Circuit Operational Amplifiers	177
22. Reflection and Refraction. Dispersion	185
23. Geometrical Optics	193
24. Diffraction and Resolution. Babinet's Principle	201
25. Polarization	211
26. Electron Orbits in a Magnetic Field. e/m	221
27. Photoelectric Effect. Work Function, Planck's Constant	227
28. Electron Diffraction. Lattice Constant	235
29. Atomic Spectra. Balmer Series	243
30. Atomic Spectra. Helium, Neon, Helium-Neon Laser	251
31. Radioactive Decay. Statistics, Half-Life	257
32. Beta and Gamma Ray Absorption	267
