<i>Preface</i>		page xi
<i>Introduction</i>		xiii
Part I Experiments in heat transfer		
I.1 Conduction		3
Experiment 1	Critical radius of insulation	5
Experiment 2	The regelation of ice – the effect of heat conduction	9
Experiment 3	Unsteady heat conduction in a sphere	16
Experiment 4	Heat conduction in materials with nonhomogeneous structure	19
Experiment 5	Measurement of thermal conductivity of solids during chemical reactions	23
Experiment 6	Temperature measurements in a transparent material: Application of the holographic interferometry	33
I.2 Convection		41
Experiment 7	A forced convection heat-transfer experiment	43
Experiment 8	Reynolds analogy for mass transfer	49
Experiment 9	Natural-convection melting of a slab of ice	54
Experiment 10	Forced-convection heat loss from 3D solids	61
Experiment 11	Forced and free convective heat transfer of a laminar flow in a horizontal heated pipe	66
Experiment 12	Measurement of convective heat-transfer coefficients on external surfaces	76
Experiment 13	Measurement of local heat-transfer coefficient on the ice surface around isothermally cooled cylinders arranged in a line	82
Experiment 14	Experiments of unsteady forced convection	

	in ducts with timewise variation of inlet temperature	88
Experiment 15	Measurement of heat and mass transfer from a body in air–water mist flow	99
Experiment 16	Measurement of transient/steady heat-transfer coefficient with simultaneous photography of flow processes from beneath the heater surface	112
I.3 Boiling		125
Experiment 17	Capillary-tube boiling	127
Experiment 18	Two characteristic regions of nucleate pool boiling and corresponding change of hydrodynamic state	135
Experiment 19	The boiling slide	142
Experiment 20	Evaporation and boiling in sessile drops on a heated surface	147
I.4 Mixing, dispersion, and diffusion		155
Experiment 21	Determination of the binary diffusion coefficient in a liquid mixture	157
Experiment 22	Diffusion distillation: A separation method for azeotropic mixtures	165
I.5 Radiation		171
Experiment 23	Determination of the emissivity of a heated copper surface	173
I.6 Heat pipes and exchangers		179
Experiment 24	Performance characteristics of an annular heat pipe	181
Experiment 25	Heat transfer during drop formation and release	192
Part II Experiments in thermodynamics		
Experiment 26	Effect of surface condition on attainable superheat of water	205
Experiment 27	Experiments for compressibility and vapor pressure	208
Experiment 28	Determination of time constants	217
Experiment 29	Very fast versus very slow processes: Which are more efficient (closer to reversibility)?	223
Experiment 30	Determination of volumetric fraction of each phase in multiphase flow	230
Experiment 31	Measurement of the latent heat of vaporization of a liquid	240

Experiment 32	Dilution techniques for the performance evaluation of continuous-flow combustion systems	245
Appendix 1	Experiments and demonstrations in thermodynamics	257
Appendix 2	Experiments and demonstrations in heat transfer	263
Appendix 3	Heat-transfer and thermodynamic films	269
