

Contents

1	General Concepts in the Theory of Measurements	1
1.1	Basic Concepts and Terms	1
1.2	The Basic Metrological Problems	4
1.3	New Forms of International Cooperation in Metrology	10
1.4	Postulates of the Theory of Measurements	12
1.5	Classification of Measurements	18
1.6	Classification of Measurement Errors	23
1.7	General Approach to Evaluation of Measurement Inaccuracy	25
1.8	Presentation of Measurement Results	27
2	Measuring Instruments and Their Properties	31
2.1	Types of Measuring Instruments	31
2.2	Metrological Characteristics of Measuring Instruments	33
2.3	Rating of the Errors of Measuring Instruments	36
2.4	Dynamic Characteristics of Measuring Instruments	49
2.5	Calibration and Verification of Measuring Instruments	53
2.6	Designing a Calibration Scheme	59
2.7	Statistical Analysis of Measuring Instrument Errors	66
3	Statistical Methods for Experimental Data Processing	71
3.1	Methods for Describing Random Quantities	71
3.2	Requirements for Statistical Estimates	75
3.3	Evaluation of the Parameters of the Normal Distribution	77
3.4	Elimination of Outlying Data	81
3.5	Construction of Confidence Intervals	83
3.6	Reliability of Estimation of the Variance of a Sample from a Normal Distribution	88
3.7	Reliability of Estimation of the Standard Deviation of the Mean of a Sample from a Normal Distribution	89
3.8	Testing Hypotheses About the Form of the Distribution Function	91
3.9	Testing for Homogeneity of Samples	93

3.10	Robust Estimates	100
3.11	Application of the Bayes' Theorem	104
4	Direct Measurements	107
4.1	Relation Between Single and Multiple Measurements	107
4.2	Classification of Elementary Errors	110
4.3	Modeling of Elementary Errors	115
4.3.1	Absolutely Constant Errors	115
4.3.2	Conditionally Constant Errors	117
4.3.3	Purely Random Errors	118
4.3.4	Quasirandom Errors	118
4.4	Composition of Uniform Distributions	119
4.5	Methods for Precise Measurements	125
4.6	Accuracy of Single Measurements Using a Measuring Instrument Under Reference Conditions	127
4.7	Accuracy of Single Measurements Using a Measuring Instrument Under Rated Conditions	130
4.8	Accuracy of Multiple Measurements	136
4.9	Universal Method for Summation of Systematic and Random Errors	139
4.10	Analysis of the Accuracy of the Universal Method for Summation of Systematic and Random Errors	141
4.11	Comparison of Different Methods for Combining Systematic and Random Errors	145
5	Indirect Measurements	151
5.1	Terminology and Classification	151
5.2	Correlation Coefficient and Its Calculation	152
5.3	Method for Constructing the Composition of Histograms	155
5.4	Traditional Method	164
5.5	Merits and Shortcomings of the Traditional Method	169
5.6	Method of Reduction	172
5.7	Method of Transformation	174
5.8	Method of Enumeration	181
5.9	Total Uncertainty of Indirect Measurements	184
5.10	Accuracy of Single Indirect Measurements	189
5.11	Accuracy of a Single Measurement with a Chain of Instruments	191
5.12	Monte Carlo Method	192
6	Combined and Simultaneous Measurements	195
6.1	General Remarks About the Method of Least Squares	195
6.2	Measurements with Linear Equally Accurate Conditional Equations	197
6.3	Measurements with Linear Unequally Accurate Conditional Equations	200

6.4	Linearization of Nonlinear Conditional Equations	202
6.5	Examples of the Application of the Method of Least Squares	204
6.6	General Remarks on Determination of the Parameters in Formulas from Empirical Data	209
6.7	Construction of Transfer Functions of Measuring Transducers	210
7	Combining the Results of Measurements	217
7.1	Introductory Remarks	217
7.2	Theoretical Principles	217
7.3	Effect of the Error of the Weights on the Error of the Weighted Mean	221
7.4	Combining the Results of Measurements with Predominately Random Errors	223
7.5	Combining the Results of Measurements Containing Both Systematic and Random Errors	226
7.6	Combining the Results of Single Measurements	229
8	Examples of Measurements and Measurement Data Processing	235
8.1	Voltage Measurement with a Pointer-Type Voltmeter	235
8.1.1	A Priori Estimation of Measurement Inaccuracy	235
8.1.2	Universal Estimation of Measurement Inaccuracy	238
8.1.3	Individual Estimation of Measurement Inaccuracy	240
8.2	Voltage Measurement with a Potentiometer and a Voltage Divider	242
8.3	Comparison of Mass Measures	246
8.4	Measurement of Electric Power at High Frequency	248
8.5	An Indirect Measurement of the Electrical Resistance of a Resistor	248
8.5.1	Application of the Traditional Method	249
8.5.2	Application of the Method of Reduction	251
8.6	Measurement of the Density of a Solid Body	253
8.6.1	Application of the Traditional Method	253
8.6.2	Application of the Method of Transformation	256
8.6.3	Application of Method of Enumeration	260
8.7	Measurement of Ionization Current	262
8.8	Measurement of the Activity of a Radioactive Source	265
9	The <i>International Vocabulary of Metrology</i> and the <i>Guide to the Expression of Uncertainty in Measurement</i>: Analysis, Criticism, and Recommendations	269
9.1	Introduction	269
9.2	Comparison of Standard Deviation and Confidence Interval as Measurement Accuracy Indicators	270
9.3	Critique of the <i>International Vocabulary of Metrology</i>	274

9.4 Critique of the <i>Guide to the Expression of Uncertainty in Measurement</i>	278
9.4.1 Scope of GUM	279
9.4.2 Philosophy of GUM	279
9.4.3 Terminology of the GUM	280
9.4.4 Evaluation of the Uncertainty in the GUM	281
9.5 Roots of the Drawbacks of GUM and VIM	283
9.6 Perspectives on Fixing GUM и VIM	284
Conclusion	287
Appendix	291
Glossary	297
