1	Elements of Probability Theory	1
1.1	Introduction to Random Variables	1
1.2	Axiomatic Scheme*	2
1.2.1	Conditional Probability	4
1.2.2	Bayes' Theorem	5
1.2.3	Statistical Independence	5
1.2.4	Random Variable	6
1.3	Frequency Scheme	8
1.3.1	Probability Density	8
1.3.2	Properties of the Probability Density $P_X(\chi)$	10
1.4	Characteristic Function	11
1.4.1	The Simplest Random Walk*	14
1.4.2	Examples in Which $G(k)$ Cannot Be Expanded in Taylor Series*	16
1.4.3	Characteristic Function in a Toroidal Lattice*	18
1.4.4	Function of Characteristic Function	21
1.5	Cumulant Expansion	22
1.6	Central Limit Theorem	24
1.7	Transformation of Random Variables	26
1.8	Fluctuations Expansion	29
1.9	Many Random Variables (Correlations)	30
1.9.1	Statistical Independence	30
1.9.2	Marginal Probability Density	31
1.9.3	Conditional Probability Density	32
1.10	Multidimensional Characteristic Function	34
1.10.1	Cumulant Diagrams (Several Variables)	35
1.11	Terwiel's Cumulants*	37
1.12	Gaussian Distribution (Several Variables)	38
1.12.1	Gaussian Distribution with Zero Odd Moments	40
1.12.2	Novikov's Theorem*	41
1.13	Transformation of Densities in n -Dimensions	43

1.14	Random Perturbation Theory*	46
1.14.1	Continuous Time Evolution	47
1.14.2	Discrete Time Evolution	48
1.15	Additional Exercises with Their Solutions	51
1.15.1	Circular Probability Density	51
1.15.2	Trapezoidal Characteristic Function	51
1.15.3	Using Novikov's Theorem	52
1.15.4	Gaussian Operational Approximation	54
1.15.5	Cumulant Diagrams	54
1.15.6	Addition of rv with Different Supports	55
1.15.7	Phase Diffusion (Periodic Oscillations)	56
1.15.8	Random Matrices	57
1.15.9	Properties of the Characteristic Function	58
1.15.10	Infinite Degrees of Freedom	59
	References	60
2	Fluctuations Close to Thermodynamic Equilibrium	61
2.1	Spatial Correlations (Einstein's Distribution)	61
2.1.1	Gaussian Approximation	62
2.2	Minimum Work*	68
2.2.1	The Thermodynamic Potential Φ	71
2.2.2	Fluctuations in Terms of $\Delta P, \Delta V, \Delta T, \Delta S$	71
2.3	Fluctuations in Mechanical Variables	73
2.3.1	Fluctuations in a Tight Rope	74
2.4	Temporal Correlations	78
2.5	Additional Exercises with Their Solutions	79
2.5.1	Time-Dependent Correlation in a Stochastic Toy Model	79
2.5.2	Energy of a String Deformation	80
	References	81
3	Elements of Stochastic Processes	83
3.1	Introduction	83
3.1.1	Time-Dependent Random Variable	83
3.1.2	The Characteristic Functional (Ensemble Representation)	84
3.1.3	Kolmogorov's Hierarchy (Multidimensional Representation)	88
3.1.4	Overview of the Multidimensional Representation	91
3.1.5	Kolmogorov's Hierarchy from the Ensemble Representation	93
3.2	Conditional Probability	93
3.3	Markov's Processes	94
3.3.1	The Chapman-Kolmogorov Equation	96
3.4	Stationary Processes	98

3.5	2π -Periodic Nonstationary Processes*	100
3.6	Brownian Motion (Wiener Process)	101
3.6.1	Increment of the Wiener Process*	103
3.7	Increments of an Arbitrary Stochastic Process*	104
3.8	Convergence Criteria*	105
3.8.1	Definitions	106
3.8.2	Markov Theorem (Ergodicity)	108
3.8.3	Continuity of the Realizations	109
3.9	Gaussian White Noise	110
3.9.1	Functional Approach	111
3.10	Gaussian Processes	113
3.10.1	Non-singular Case	113
3.10.2	The Singular Case (White Correlation)*	113
3.11	Spectral Density of Fluctuations (Nonstationary sp)*	115
3.12	Markovian and Gaussian Processes	118
3.12.1	The Ornstein-Uhlenbeck Process	123
3.13	Einstein Relation	125
3.14	Generalized Ornstein-Uhlenbeck Process*	127
3.15	Phase Diffusion*	130
3.15.1	Dielectric Relaxation	131
3.16	Stochastic Realizations (Eigenfunction Expansions)	133
3.17	Stochastic Differential Equations	137
3.17.1	Langevin Equation	137
3.17.2	Wiener's Integrals in the Stratonovich Calculus	139
3.17.3	Stratonovich's Stochastic Differential Equations	141
3.18	The Fokker-Planck Equation	146
3.19	The Multidimensional Fokker-Planck Equation*	155
3.19.1	Spherical Brownian Motion	158
3.20	Additional Exercises with Their Solutions	160
3.20.1	Realization of a Campbell Noise	160
3.20.2	Gaussian White Noise Limit	161
3.20.3	On the Realizations of a Continuous Markov Process	161
3.20.4	On the Chapman-Kolmogorov Necessary Condition	162
3.20.5	Conditional Probability and Bayes' Rule	164
3.20.6	Second-Order Markov Process	165
3.20.7	Scaling Law from the Wiener Process	165
3.20.8	Spectrum of the Wiener Process	166
3.20.9	Time Ordered Correlations	167
3.20.10	On the Cumulants of Integrated Processes	168
3.20.11	Dynamic Versus Static Disorder	170
3.20.12	On the van Kampen Lemma	170
3.20.13	Random Rectifier	172
3.20.14	Regular Boundary	174
