CONTENTS

PREFACE xi

Chapter 1 BASIC PRINCIPLES FOR ELECTRIC MACHINE ANALYSIS 1

1.1 Introduction / 1
1.2 Magnetically Coupled Circuits / 1
1.3 Electromechanical Energy Conversion / 11
1.4 Machine Windings and Air-Gap MMF / 35
1.5 Winding Inductances and Voltage Equations / 47
References / 58
Problems / 58

Chapter 2 DIRECT-CURRENT MACHINES 67

2.1 Introduction / 67
2.2 Elementary Direct-Current Machine / 68
2.3 Voltage and Torque Equations / 76
2.4 Basic Types of Direct-Current Machines / 78
2.5 Dynamic Characteristics of Permanent-Magnet and Shunt dc Motors / 88
2.6 Time-Domain Block Diagrams and State Equations / 92
2.7 Solution of Dynamic Characteristics by Laplace Transformation / 98
References / 104
Problems / 105

Chapter 3 REFERENCE-FRAME THEORY 109

3.1 Introduction / 109
3.2 Background / 109
3.3 Equations of Transformation: Changes of Variables / 111
3.4 Stationary Circuit Variables Transformed to the Arbitrary Reference Frame / 115
3.5 Commonly Used Reference Frames / 123
3.6 Transformation Between Reference Frames / 124
3.7 Transformation of a Balanced Set / 126
3.8 Balanced Steady-State Phasor Relationships / 127
3.9 Balanced Steady-State Voltage Equations / 130
3.10 Variables Observed from Several Frames of Reference / 133
References / 137
Problems / 138

Chapter 4 SYMMETRICAL INDUCTION MACHINES 141

4.1 Introduction / 141
4.2 Voltage Equations in Machine Variables / 142
4.3 Torque Equation in Machine Variables / 146
4.4 Equations of Transformation for Rotor Circuits / 147
4.5 Voltage Equations in Arbitrary Reference-Frame Variables / 149
4.6 Torque Equation in Arbitrary Reference-Frame Variables / 153
4.7 Commonly Used Reference Frames / 154
4.8 Per Unit System / 155
4.9 Analysis of Steady-State Operation / 157
4.10 Free Acceleration Characteristics / 165
4.11 Free Acceleration Characteristics Viewed from Various Reference Frames / 172
4.12 Dynamic Performance During Sudden Changes in Load Torque / 174
4.13 Dynamic Performance During a 3-Phase Fault at the Machine Terminals / 181
4.14 Computer Simulation in the Arbitrary Reference Frame / 184
References / 187
Problems / 188

Chapter 5 SYNCHRONOUS MACHINES 191

5.1 Introduction / 191
5.2 Voltage Equations in Machine Variables / 192
5.3 Torque Equation in Machine Variables / 197

5.4 Stator Voltage Equations in Arbitrary Reference-Frame Variables / 198
5.5 Voltage Equations in Rotor Reference-Frame Variables: Park's Equations / 200
5.6 Torque Equations in Substitute Variables / 206
5.7 Rotor Angle and Angle Between Rotors / 207
5.8 Per Unit System / 209
5.9 Analysis of Steady-State Operation / 210
5.10 Dynamic Performance During a Sudden Change in Input Torque / 219
5.11 Dynamic Performance During a 3-Phase Fault at the Machine Terminals / 225
5.12 Approximate Transient Torque Versus Rotor Angle Characteristics / 229
5.13 Comparison of Actual and Approximate Transient Torque–Angle Characteristics During a Sudden Change in Input Torque: First Swing Transient Stability Limit / 232
5.14 Comparison of Actual and Approximate Transient Torque–Angle Characteristics During a 3-Phase Fault at the Terminals: Critical Clearing Time / 239
5.15 Equal-Area Criterion / 242
5.16 Computer Simulation / 246
References / 255
Problems / 256

Chapter 6 THEORY OF BRUSHLESS dc MACHINES 261

6.1 Introduction / 261
6.2 Voltage and Torque Equations in Machine Variables / 261
6.3 Voltage and Torque Equations in Rotor Reference-Frame Variables / 264
6.4 Analysis of Steady-State Operation / 266
6.5 Dynamic Performance / 274
References / 281
Problems / 281

Chapter 7 MACHINE EQUATIONS IN OPERATIONAL IMPEDANCES AND TIME CONSTANTS 283

7.1 Introduction / 283
7.2 Park's Equations in Operational Form / 284
7.3 Operational Impedances and $G(p)$ for a Synchronous Machine with Four Rotor Windings / 284
7.4 Standard Synchronous Machine Reactances / 288
7.5 Standard Synchronous Machine Time Constants / 290
7.6 Derived Synchronous Machine Time Constants / 291

7.7 Parameters from Short-Circuit Characteristics / 294
7.8 Parameters from Frequency-Response Characteristics / 301
References / 307
Problems / 308

Chapter 8 LINEARIZED MACHINE EQUATIONS 311

8.1 Introduction / 311
8.2 Machine Equations to Be Linearized / 312
8.3 Linearization of Machine Equations / 313
8.4 Small-Displacement Stability: Eigenvalues / 323
8.5 Eigenvalues of Typical Induction Machines / 324
8.6 Eigenvalues of Typical Synchronous Machines / 327
8.7 Transfer Function Formulation / 330
References / 335
Problems / 335

Chapter 9 REDUCED-ORDER MACHINE EQUATIONS 337

9.1 Introduction / 337
9.2 Reduced-Order Equations / 338
9.3 Induction Machine Large-Excursion Behavior Predicted by Reduced-Order Equations / 343
9.4 Synchronous Machine Large-Excursion Behavior Predicted by Reduced-Order Equations / 350
9.5 Linearized Reduced-Order Equations / 354
9.6 Eigenvalues Predicted by Linearized Reduced-Order Equations / 354
9.7 Simulation of Reduced-Order Models / 355
9.8 Closing Comments and Guidelines / 358
References / 358
Problems / 359

Chapter 10 SYMMETRICAL AND UNSYMMETRICAL 2-PHASE INDUCTION MACHINES 361

10.1 Introduction / 361
10.2 Analysis of Symmetrical 2-Phase Induction Machines / 362
10.3 Voltage and Torque Equations in Machine Variables for Unsymmetrical 2-Phase Induction Machines / 371
10.4 Voltage and Torque Equations in Stationary Reference-Frame Variables for Unsymmetrical 2-Phase Induction Machines / 373

10.5 Analysis of Steady-State Operation of Unsymmetrical 2-Phase Induction Machines / 377
10.6 Single-Phase Induction Machines / 383
References / 393
Problems / 393

Chapter 11 SEMICONTROLLED BRIDGE CONVERTERS 395

11.1 Introduction / 395
11.2 Single-Phase Load Commutated Converter / 395
11.3 3-Phase Load Commutated Converter / 406
References / 425
Problems / 425

Chapter 12 dc MACHINE DRIVES 427

12.1 Introduction / 427
12.2 Solid-State Converters for dc Drive Systems / 427
12.3 Steady-State and Dynamic Characteristics of ac/dc Converter Drives / 431
12.4 One-Quadrant dc/dc Converter Drive / 443
12.5 Two-Quadrant dc/dc Converter Drive / 460
12.6 Four-Quadrant dc/dc Converter Drive / 463
12.7 Machine Control with Voltage-Controlled dc/dc Converter / 466
12.8 Machine Control with Current-Controlled dc/dc Converter / 468
References / 476
Problems / 476

Chapter 13 FULLY CONTROLLED 3-PHASE BRIDGE CONVERTERS 481

13.1 Introduction / 481
13.2 The 3-Phase Bridge Converter / 481
13.3 180° Voltage Source Operation / 487
13.4 Pulse-Width Modulation / 494
13.5 Sine-Triangle Modulation / 499
13.6 Third-Harmonic Injection / 503
13.7 Space-Vector Modulation / 506
13.8 Hysteresis Modulation / 510
13.9 Delta Modulation / 512
13.10 Open-Loop Voltage and Current Control / 513
13.11 Closed-Loop Voltage and Current Controls / 516

References / 520
Problems / 521

Chapter 14 INDUCTION MOTOR DRIVES 525

14.1 Introduction / 525
14.2 Volts-Per-Hertz Control / 525
14.3 Constant Slip Current Control / 532
14.4 Field-Oriented Control / 540
14.5 Direct Rotor-Oriented Field-Oriented Control / 544
14.6 Robust Direct Field-Oriented Control / 546
14.7 Indirect Rotor Field-Oriented Control / 550
14.8 Conclusions / 554
References / 554
Problems / 555

Chapter 15 BRUSHLESS dc MOTOR DRIVES 557

15.1 Introduction / 557
15.2 Voltage-Source Inverter Drives / 558
15.3 Equivalence of VSI Schemes to Idealized Source / 560
15.4 Average-Value Analysis of VSI Drives / 568
15.5 Steady-State Performance of VSI Drives / 571
15.6 Transient and Dynamic Performance of VSI Drives / 574
15.7 Consideration of Steady-State Harmonics / 578
15.8 Case Study: Voltage-Source Inverter-Based Speed Control / 582
15.9 Current-Regulated Inverter Drives / 586
15.10 Voltage Limitations of Current-Source Inverter Drives / 590
15.11 Current Command Synthesis / 591
15.12 Average-Value Modeling of Current-Regulated Inverter Drives / 595
15.13 Case Study: Current-Regulated Inverter-Based Speed Controller / 597
References / 600
Problems / 600

Appendix A Trigonometric Relations, Constants and Conversion Factors, and Abbreviations 603

INDEX 605
