| <b>Preface</b>   | <b>ix</b> |
| <b>Chapter 1 Introduction</b>                              | <b>1</b>  |
| 1.1 The concept of temperature                             | 1         |
| 1.2 The laws of thermodynamics                             | 4         |
| 1.3 Order and disorder and low temperatures                | 7         |
| 1.4 A brief history of low-temperature physics             | 9         |
| 1.5 Applications of low temperatures                       | 10        |
| Bibliography   | 11        |
| <b>Chapter 2 Properties of solids at low temperatures</b>  | <b>12</b> |
| 2.1 General properties                                     | 12        |
| 2.2 Electronic properties of materials at low temperatures | 24        |
| 2.3 Superconductivity                                      | 37        |
| Bibliography   | 51        |
| <b>Chapter 3 Properties of liquid helium</b>               | <b>52</b> |
| 3.1 Liquid ${}^4\text{He}$                                 | 52        |
| 3.2 Liquid ${}^3\text{He}$                                 | 62        |
| 3.3 Liquid ${}^3\text{He}$ - ${}^4\text{He}$ mixtures      | 70        |
| 3.4 Solid helium   | 72        |
| 3.5 Adsorbed helium films                                  | 73        |
| Bibliography   | 74        |

|   |            |
|---|------------|
| <b>Chapter 4 Reaching low temperatures, stage 1:<br/><math>^4\text{He}</math> cryogenic systems 300–1 K</b>   | <b>76</b>  |
| 4.1 Liquid cryogens   | 76         |
| 4.2 Liquefaction of gases   | 77         |
| 4.3 Storage and handling of liquid cryogens   | 91         |
| 4.4 Low-temperature experimental apparatus  | 94         |
| 4.5 Obtaining temperatures above 4.2 K  | 99         |
| 4.6 Obtaining temperatures below 4.2 K  | 103        |
| 4.7 Thermal contact and Kapitza resistance  | 107        |
| Bibliography  | 108        |
| <b>Chapter 5 Reaching low temperatures, stage 2:<br/><math>^3\text{He}</math> and <math>^3\text{He}</math>–<math>^4\text{He}</math> cryogenic systems,<br/>1 K–1 mK</b> | <b>109</b> |
| 5.1 The $^3\text{He}$ cryostat  | 109        |
| 5.2 The $^3\text{He}$ – $^4\text{He}$ dilution refrigerator   | 113        |
| 5.3 Pomerantchuk cooling  | 119        |
| 5.4 Working at millikelvin temperatures   | 123        |
| Bibliography  | 124        |
| <b>Chapter 6 Reaching low temperatures, stage<br/>3: adiabatic demagnetization, 1 mK–</b>   | <b>125</b> |
| 6.1 Magnetic properties of matter at low temperatures   | 125        |
| 6.2 Magnetic work   | 130        |
| 6.3 Entropy in magnetic sub-systems   | 133        |
| 6.4 Principles of magnetic cooling  | 135        |
| 6.5 Practical magnetic cooling  | 141        |
| 6.6 Working at microkelvin temperatures   | 144        |
| Bibliography  | 145        |
| <b>Chapter 7 Thermometry</b>  | <b>147</b> |
| 7.1 Thermometry between 1 K and room temperature  | 149        |
| 7.2 Thermometry below 1 K   | 166        |
| 7.3 Temperature measurement in the presence of<br>magnetic fields   | 175        |
| Bibliography  | 175        |

|   |            |
|---|------------|
| <b>Chapter 8 Experimental techniques</b>      | <b>177</b> |
| 8.1 Vacuum technique                          | 177        |
| 8.2 Electrical wiring at low temperatures     | 188        |
| 8.3 Optical access                            | 194        |
| 8.4 Mechanical access                         | 196        |
| 8.5 High magnetic fields and low temperatures | 197        |
| Bibliography                                  | 202        |
| <b>Appendix: Laser cooling</b>                | <b>203</b> |
| References                                    | 208        |
| <b>Index</b>                                  | <b>209</b> |
