1	Monte Carlo methods	1
1.1	Popular games in Monaco	3
1.1.1	Direct sampling	3
1.1.2	Markov-chain sampling	4
1.1.3	Historical origins	9
1.1.4	Detailed balance	15
1.1.5	The Metropolis algorithm	21
1.1.6	A priori probabilities, triangle algorithm	22
1.1.7	Perfect sampling with Markov chains	24
1.2	Basic sampling	27
1.2.1	Real random numbers	27
1.2.2	Random integers, permutations, and combinations	29
1.2.3	Finite distributions	33
1.2.4	Continuous distributions and sample transformation	35
1.2.5	Gaussians	37
1.2.6	Random points in/on a sphere	39
1.3	Statistical data analysis	44
1.3.1	Sum of random variables, convolution	44
1.3.2	Mean value and variance	48
1.3.3	The central limit theorem	52
1.3.4	Data analysis for independent variables	55
1.3.5	Error estimates for Markov chains	59
1.4	Computing	62
1.4.1	Ergodicity	62
1.4.2	Importance sampling	63
1.4.3	Monte Carlo quality control	68
1.4.4	Stable distributions	70
1.4.5	Minimum number of samples	76
	Exercises	77
