Preface	xiii
Acknowledgements	xv
NMR Acronyms and Abbreviations	xvii
<b>CHAPTER ONE</b>	<b>1</b>
Introduction	1
1.1 Overview	1
1.2 Examples	3
1.3 References	11
<b>CHAPTER TWO</b>	<b>13</b>
Principles of NMR of Organic Solids	13
2.1 Introduction	13
2.2 Semiclassical description of pulsed NMR	13
2.3 Concepts of NMR in terms of textbook quantum mechanics	16
2.4 Hamiltonians and spectra	18
2.4.1 Important NMR interactions and their Hamiltonians	18
2.4.2 Segmental-orientation dependence of NMR frequencies	21
2.4.3 Powder lineshapes	28
2.4.4 Motional averaging of interaction tensors and NMR spectra	32
2.4.5 Basics of sample spinning (MAS and OMAS)	35
2.4.6 $^{13}\text{C}$ and $^1\text{H}$ chemical shifts in theory and practice	37
2.4.7 Intermediate motional regime	41
2.5 Quantum-mechanical calculations of NMR time evolutions	43
2.5.1 Density operator $\hat{\rho}$ and magnetization	43
2.5.2 The action of Hamiltonians on $\hat{\rho}$ : time evolution	45
2.5.3 Matrix representations of spin operators	47
2.5.4 Time evolution of the density matrix	48
2.5.5 $^2\text{H}$ quadrupolar interaction	49
2.5.6 Heteronuclear dipolar couplings	52
2.5.7 $^1\text{H}$ wideline spectra	55
2.5.8 Rotating frames	56
2.6 The effects of radio-frequency (rf) pulses	58
2.6.1 Rf pulses and the rotating frame	58
2.6.2 Pulse propagators and the sense of precession	59
2.6.3 Calculating the Hahn spin echo	60
2.6.4 The solid (quadrupolar) echo	61
2.6.5 Finite pulse lengths and their excitation effects	63
2.6.6 Composite $180^\circ$ pulses	66
2.7 References	67

<b>CHAPTER THREE</b>	69
<b>High-Resolution NMR Techniques for Solids</b>	69
3.1 Introduction	69
3.2 Phenomenological descriptions of pulsed techniques	70
3.3 Averaging of Hamiltonians	72
3.3.1 Homonuclear decoupling by multipulse sequences	72
3.3.2 How to determine average Hamiltonians	75
3.3.3 The Magnus expansion	77
3.3.4 Second averaging	78
3.4 Further applications of average-Hamiltonian theory	79
3.4.1 Heteronuclear decoupling	79
3.4.2 Spin lock	81
3.4.3 Cross polarization	82
3.4.4 Chemical-shift scaling	85
3.5 Homonuclear polarization transfer	85
3.5.1 Phenomenological description of spin diffusion	86
3.5.2 Polarization transfer between two spins	86
3.5.3 Spin exchange in systems of abundant spins	88
3.6 Time-dependent perturbation theory	91
3.7 Proton-driven $^{13}\text{C}$ spin diffusion, and $^1\text{H}$ spin diffusion	95
3.8 Selective excitation by hard pulses	98
3.9 Magic-angle spinning (MAS)	102
3.9.1 MAS time signals and sidebands	102
3.9.2 The mirror-image condition for absorptive sidebands	107
3.9.3 Total suppression of spinning sidebands (TOSS)	109
3.9.4 Time-reversed TOSS	112
3.9.5 Hamiltonians under MAS	113
3.10 Averaging of second-order quadrupolar couplings	115
3.11 Zero-field NMR	119
3.12 Multiple-quantum coherences	122
3.13 Incoherent effects in solid-state NMR	126
3.13.1 Phenomenology of relaxation in solid-state NMR	126
3.13.2 Coherent vs. incoherent processes	129
3.13.3 Homogeneous, inhomogeneous, coherent line-broadening	130
3.13.4 (In)homogeneous: line-broadening vs. Hamiltonians	132
3.14 References	132
<b>CHAPTER FOUR</b>	135
<b>Fourier Theory for 1D and 2D NMR</b>	135
4.1 Motivation	135
4.2 Basic definitions	136
4.3 Useful FT relations	137
4.4 Important Fourier pairs	140
4.5 Specific applications of Fourier theory in NMR	142
4.5.1 Quadrature detection and TPPI	142
4.5.2 Absorptive and dispersive signals, and constant phase correction	143

4.5.3 Dead time, linear phase correction, and baseline distortions	145
4.6 Fourier transformation in two-dimensional (2D) NMR	148
4.6.1 The 2D phase problem and its solutions	148
4.6.2 The phase problems in multidimensional MAS sideband spectra	152
4.6.3 The projection/cross-section theorem	154
4.6.4 Shearing of 2D spectra	155
4.7 Mathematical formulation of data sampling	156
4.8 Consequences of data sampling	157
4.8.1 Aliasing	157
4.8.2 Truncation effects and apodization	157
4.8.3 Zero-filling	160
4.8.4 Sampling of the first datapoint	160
4.9 Signal and noise	161
4.9.1 The 'dwell-time theorem'	162
4.9.2 Signal increase by line narrowing	163
4.9.3 Damping, resolution, and measuring time	164
4.9.4 Measuring times: 1D vs. 2D spectra	166
4.9.5 Signal-to-noise ratio and 2D data acquisition	168
4.10 Concluding remarks	169
4.11 References	169
<b>CHAPTER FIVE</b>	171
<b>Short Review of Structure and Dynamics of Solid Polymers</b>	171
5.1 Motivation	171
5.2 Chain and phase structure of semicrystalline polymers	171
5.3 Dynamical processes in polymers	174
5.4 Solid biopolymers	175
5.5 Heterogeneous polymer systems	176
5.6 Liquid-crystalline polymers	178
5.7 List of polymer acronyms	180
5.8 References	180
<b>CHAPTER SIX</b>	182
<b>Multidimensional Separation and Correlation</b>	182
6.1 Introduction	182
6.2 General aspects of 2D spectra and time signals	182
6.3 Separation vs. correlation – Part I	186
6.4 Separation of chemical-shift powder patterns	188
6.4.1 Stop-and-go	189
6.4.2 Magic-angle hopping and ultraslow MAS	190
6.4.3 Variable-angle spinning 2D experiments	194
6.4.4 MAS with chemical-shift patterns recovered by $180^\circ$ pulses	195
6.5 Separation of MAS chemical-shift sideband patterns	198
6.5.1 Why simple combinations of TOSS and MAS fail	199
6.5.2 Isotropic-shift separation via TOSS and deTOSS	201

6.5.3	Separation of sidebands by their order, and PASS	202
6.6	Separation of dipolar patterns by isotropic shifts	205
6.6.1	Separation of heteronuclear dipolar sideband patterns	205
6.6.2	Separation of heteronuclear powder patterns	210
6.6.3	$^1\text{H}$ - $^{13}\text{C}$ Pake patterns in unlabelled solids	210
6.6.4	$^{13}\text{C}$ - $^{13}\text{C}$ dipolar recovery at the magic angle (DRAMA)	211
6.6.5	Rotational-echo double resonance (REDOR)	212
6.6.6	$^1\text{H}$ -wideline separation (WISE)	213
6.7	Correlation experiments	216
6.7.1	Homonuclear $^{13}\text{C}$ chemical-shift correlation for single crystals	216
6.7.2	Heteronuclear correlation of isotropic chemical shifts	217
6.7.3	Correlation of static $^{13}\text{C}$ chemical-shift and $^{13}\text{C}$ - $^1\text{H}$ dipolar patterns	220
6.7.4	Correlation of static $^{13}\text{C}$ chemical-shift and $^{13}\text{C}$ - $^1\text{H}$ dipolar patterns under SASS conditions	225
6.7.5	Correlation of $^{13}\text{C}$ chemical-shift and $^{13}\text{C}$ - $^1\text{H}$ dipolar interactions under slow MAS	226
6.7.6	Zero-field correlation experiments	227
6.8	2D Relaxation NMR	227
6.9	Separation vs. correlation - Part II	231
6.10	References	233
<b>CHAPTER SEVEN</b>		236
<b>Polymer Dynamics: Multidimensional Exchange Experiments</b>		236
7.1	Introduction	236
7.2	Exchange by segmental reorientations	239
7.3	2D exchange powder spectra for vanishing asymmetry parameter ( $\eta = 0$ )	240
7.4	The reorientation-angle distribution	244
7.5	2D Exchange powder spectra for $\eta \neq 0$	247
7.6	The symmetry of the exchange patterns	249
7.7	Exchange patterns for rotation around a principal axis	250
7.8	2D exchange spectra of oriented samples	250
7.9	Model-independent information from 2D exchange spectra	254
7.10	3D Exchange NMR	255
7.10.1	The relevance of 3D exchange NMR in complex solid materials	255
7.10.2	Two-dimensional cross-sections of 3D spectra	257
7.11	The MAS sideband-exchange 2D experiment	259
7.12	Helical jumps in polymer crystallites detected by 2D and 3D NMR	260
7.13	Characterization of dynamics in the glassy state by 2D exchange NMR	268
7.14	Dynamical exchange of isotropic shifts	269
7.14.1	Chemical exchange in low-molar-mass solids	270
7.14.2	Isotropic-shift exchange in PE by chain diffusion in polyethylene	271
7.15	References	274

<b>CHAPTER EIGHT</b>		277
<b>Multidimensional Exchange NMR Above the Glass Transition</b>		277
8.1	Dynamics above the glass transition	277
8.2	2D exchange experiments	279
8.3	Exchange near $T_g$ in inhomogeneous systems	284
8.4	Reduced 4D experiment	286
8.5	Trans-gauche isomerizations above $T_g$	289
8.6	3D exchange NMR above $T_g$	292
8.7	Summary of results of multidimensional exchange NMR above $T_g$	294
8.8	References	295
<b>CHAPTER NINE</b>		297
<b>Multidimensional Spectra, Correlation Functions, and Stochastic Processes</b>		297
9.1	2D Exchange spectra and correlation functions	297
9.1.1	Basics on thermal motions and correlation functions	297
9.1.2	Simple and space-time correlation functions	299
9.1.3	Exchange NMR signals vs. correlation functions in neutron scattering	301
9.1.4	Time-dependent orientational autocorrelation functions $C_L(t)$	304
9.1.5	How to determine $C_L(t)$ from 2D exchange spectra	305
9.1.6	Non-ergodicity	307
9.1.7	Helical-jump correlation functions	307
9.2	Distributions of correlation times	309
9.3	Stochastic processes and probabilities	310
9.3.1	Markov processes	311
9.3.2	Information on stochastic processes from 3D exchange spectra	313
9.3.3	Analysis of the reduced 4D experiment	315
9.4	The exchange matrix	316
9.5	References	318
<b>CHAPTER TEN</b>		319
<b>Time-Domain Signals for Multidimensional Spectra</b>		319
10.1	Introduction	319
10.2	Pulse sequences for exchange spectroscopy	319
10.2.1	Amplitude modulation for $S = \frac{1}{2}$	319
10.2.2	Pulse sequences for 2D exchange $^{13}\text{C}$ NMR	320
10.2.3	Stimulated echoes in the 2D time signals	321
10.2.4	Exchange pulse sequences for $^2\text{H}$ quadrupolar coupling	323
10.2.5	$T_1$ relaxation during the mixing time	326
10.2.6	Limits to the mixing times	328
10.3	Motion during evolution and detection periods	328
10.4	2D MAS exchange time signals	332
10.4.1	Time signals in the sideband-exchange experiment	332
10.4.2	MAS 'time-reversed' signal	334

10.4.3	Correlation of isotropic chemical shifts with totally isotropic evolution	336
10.5	Practical hints for 2D spectroscopy of polymers	337
10.6	References	340
<b>CHAPTER ELEVEN</b>		
<b>Multidimensional Exchange Spectra: Simulations, Models, Angle Distributions</b>		341
11.1	Motivation	341
11.2	Basic technicalities of spectral simulations	341
11.3	2D powder spectra for axially symmetric coupling ( $\eta = 0$ )	342
11.4	Reorientation-angle distributions for various models	343
11.4.1	Random jumps	344
11.4.2	Uniaxial rotational diffusion	344
11.4.3	Isotropic rotational diffusion	347
11.5	Spectra for non-axially-symmetric coupling ( $\eta > 0$ )	349
11.5.1	Simulation for discrete jumps	349
11.5.2	Simulation for random jumps ( $\eta > 0$ )	350
11.5.3	Simulation for isotropic rotational diffusion ( $\eta > 0$ )	351
11.6	Model-independent extraction of angular distributions from NMR spectra	352
11.7	Linear least-squares fits	356
11.8	References	358
<b>CHAPTER TWELVE</b>		
<b>Determination of Order in Polymers by Multidimensional NMR</b>		360
12.1	Introduction	360
12.2	Angles and coordinate systems	360
12.3	Moment expansions	361
12.3.1	Moment expansions for a uniaxial system	363
12.3.2	$P_L$ -Weighted spectra for the moment expansion	363
12.3.3	Full moment expansion for non-axial systems	367
12.4	Synchronized-MAS 2D experiment: site-resolved orientation measurement	369
12.4.1	Molecular orientation and sidebands intensities in the sync-MAS 2D spectrum	371
12.4.2	Analysis for systems with transverse isotropy	372
12.4.3	Macroscopically uniaxial systems without transverse isotropy	377
12.4.4	Sync-MAS 2D studies of oriented polymers	379
12.5	3D spectra with side-band separated orientation spectra	380
12.6	3D correlation of order and motion	384
12.7	The DECODER technique	385
12.7.1	Introduction and motivation	388
12.7.2	Relation between orientational and spectral features	389
12.7.3	Analogies of DECODER NMR and wide-angle X-ray scattering	389
		396

12.7.4	Applications of the DECODER experiment	397
12.8	References	401
<b>CHAPTER THIRTEEN</b>		
<b>Domain Sizes and Internuclear Distances From Spin Diffusion and Dipolar Couplings</b>		402
13.1	Introduction	402
13.2	$^1\text{H}$ spin diffusion	403
13.2.1	$^1\text{H}$ experiments: principles and 1D spectra	403
13.2.2	The CRAMPS 2D exchange experiment	405
13.2.3	$^1\text{H}$ spin diffusion with $^{13}\text{C}$ detection	406
13.2.4	2D vs. selective 1D $^1\text{H}$ - $^{13}\text{C}$ spectra	407
13.2.5	WISE 2D experiments with $^1\text{H}$ spin diffusion	408
13.2.6	Selective saturation transfer	410
13.2.7	Short review of $^1\text{H}$ spin-diffusion studies	411
13.3	Analysis of $^1\text{H}$ spin-diffusion data	413
13.3.1	Initial rate, interfacial area, and domain sizes	414
13.3.2	Analytical solutions	417
13.3.3	Lattice calculations of diffusion	421
13.3.4	$^1\text{H}$ spin diffusion compared with small-angle scattering	422
13.4	$^1\text{H}$ spin diffusion data at long mixing times	423
13.4.1	Effects of $T_1$ relaxation	423
13.4.2	How to obtain complete-exchange intensities	424
13.5	$^{13}\text{C}$ spin diffusion	425
13.5.1	Low-abundance problem in short-range structural analysis	426
13.5.2	2D exchange powder patterns	426
13.5.3	$^{13}\text{C}$ spin exchange between resolved sites	429
13.5.4	Speeding-up of $^{13}\text{C}$ spin diffusion	430
13.5.5	Radio-frequency-driven spin diffusion	431
13.5.6	Rotor-driven $^{13}\text{C}$ spin diffusion	432
13.5.7	Rotational resonance	436
13.6	References	438
<b>APPENDICES</b>		
<b>Appendix A Trigonometric and Geometric Relations, Complex Numbers</b>		440
A.1	Simple trigonometry	440
A.2	Complex numbers and complex exponentials	441
A.3	Miscellaneous	443
<b>Appendix B Rotations and Euler Angles</b>		444
B.1	Active vs. passive rotations	444
B.2	Euler angles and rotation matrices	445
B.3	Rotation of functions	448
B.4	Rotations in spin space	449
B.5	Irreducible tensors and Wigner rotation matrices	449

<b>Appendix C</b>	<b>Evolution of <math>^2\text{H}</math> Density-Operator Terms Under Pulses and Quadrupole Coupling</b>	453
<b>Appendix D</b>	<b>Useful Tools in Matrix Algebra</b>	454
D.1	Introduction	454
D.2	The principal-value problem	454
D.3	Diagonalization and the principal-axes system	455
D.4	How to simplify exponential matrices by diagonalization	456
<b>Appendix E</b>	<b>Differential Conservation of the Integral and the Jacobian Determinant</b>	457
<b>Appendix F</b>	<b>Ellipses, Ellipoids, and the Lissajou Representation</b>	461
<b>Appendix G</b>	<b>Truncation of Hamiltonians</b>	463
<b>Index</b>		466
