Contents

	Preface	*page ix*
1	**Cellular disorder**	
1.1	Perfect spatial order	1
1.2	Substitutional disorder	5
1.3	Magnetic disorder	6
1.4	Ice disorder	11
1.5	Short-range order	17
1.6	Long-range order	22
1.7	The range of order and ordered domains	25
1.8	Spectral disorder	32
2	**Topological disorder**	
2.1	Atomicity	36
2.2	Disordered linear chains	39
2.3	Physical realizations of one-dimensional systems	43
2.4	Dimensionality and order	47
2.5	Dislocation disorder	51
2.6	Microcrystalline disorder	56
2.7	Atomic distribution functions	58
2.8	Bond network disorder	64
2.9	Amorphous or paracrystalline?	67
2.10	Statistical geometry of bond networks	72
2.11	The Bernal model of a liquid	77
2.12	Analytical theories of the liquid state	87
2.13	Liquid mixtures	96
2.14	Liquid phases of non-spherical molecules	102
2.15	Gas-like disorder	106

3	**Continuum disorder**	
3.1	Continuum models	108
3.2	Homogeneous random fields	110
3.3	Gaussian randomness	113
3.4	Statistical topography	118
4	**The observation of disorder**	
4.1	Diffraction experiments and diffraction theory	122
4.2	Neutron diffraction	127
4.3	Structure determination by X-rays	129
4.4	Small-angle scattering	129
4.5	Diffraction by a mixture	133
4.6	Diffraction effects of substitutional disorder	137
4.7	Diffraction and imaging	140
5	**Statistical mechanics of substitutional disorder**	
5.1	Physical problems and mathematical puzzles	142
5.2	Mean field approximation	144
5.3	Short-range order	147
5.4	Cluster methods	151
5.5	The Ising model in one dimension	161
5.6	The one-dimensional Heisenberg model	165
5.7	The Onsager solution of the two-dimensional Ising problem	171
5.8	Ferroelectric models in two dimensions	178
5.9	The spherical model of ferromagnetism	182
5.10	Graphical expansions	187
5.11	Order as a thermodynamic variable	197
5.12	Scaling and renormalization of critical phenomena	200
6	**Thermodynamics of topological disorder**	
6.1	The linear gas–liquid–crystal	209
6.2	The van der Waals approximation	213
6.3	The Percus–Yevick approximation	218
6.4	Perturbation methods	220
6.5	The virial series	223
6.6	Computer simulation methods	226
6.7	Melting	232
6.8	Entropy and free volume	240

7	**Macromolecular disorder**	
7.1	Regular solutions	246
7.2	Entropy of macromolecular solutions	248
7.3	Model chains	252
7.4	Random coils	255
7.5	Branching and gel formation	259
7.6	Rubber elasticity	265
7.7	Excluded volume	269
7.8	Random walks on a lattice	272
7.9	Continuum models	272
7.10	Entanglements	282
8	**Excitations on a disordered linear chain**	
8.1	Dynamical, magnetic and electronic excitations	286
8.2	One-dimensional models	291
8.3	Phase-angle representation	295
8.4	Spectral gaps in disordered chains	302
8.5	The spectral density	307
8.6	Local density approximation	312
8.7	Localization of eigenfunctions	315
9	**Excitations on a disordered lattice**	
9.1	The TBA model	321
9.2	The Green function formalism	322
9.3	Propagator and locator expansions	325
9.4	The coherent potential approximation	332
9.5	Local environment corrections to CPA	341
9.6	Spectral bounds and band tails	345
9.7	Spectral moments and continued fractions	348
9.8	Off-diagonal disorder	356
9.9	Anderson localization	358
9.10	Percolation theory	370
9.11	Maze conduction	379

10 Electrons in disordered metals
10.1 The NFE model 387
10.2 Screened pseudopotentials 391
10.3 Muffin-tin potentials 398
10.4 The electron spectrum 404
10.5 Many-atom scattering 409
10.6 Scattering operators 413
10.7 Partial-wave representations 416
10.8 The coherent-wave approximation 421
10.9 Cluster scattering 425
10.10 Transport theory 431

11 Excitations of a topologically disordered network
11.1 Dynamics of liquids and glasses 439
11.2 The continuum limit 441
11.3 Ideal tetrahedral coordination 447
11.4 Tree models 454
11.5 The band–gap paradox 456

12 Dilute and amorphous magnets
12.1 The dilute Ising model 460
12.2 Dilute Heisenberg magnets 464
12.3 Amorphous ferromagnets and spin glasses 467

13 Electrons in 'gases'
13.1 Gas-like disorder 472
13.2 The metal–insulator transition 475
13.3 Hopping conduction 477
13.4 Semi-classical electrons in a random potential 481
13.5 Spectral tails in a choppy random potential 487
