

Contents

1. **The Scope of Astronomy** 1
The Development of Astronomical Thought –
Astronomy as a Science – Contributions of Astronomy

2. **Ancient Astronomy** 9
Earliest Astronomers – Early Greek Astronomy –
Later Greek Astronomy – Other Greek Science –
Indian and Arabian Astronomy

3. **The Heliocentric Hypothesis** 33
Medieval Astronomy – Copernicus – Tycho Brahe –
Kepler – Galileo

4. **Newton's Laws and Gravitation** 55
Newton's Laws of Motion – Acceleration in a Circular Orbit –
Universal Gravitation – Limitations to Newton's Laws

5. **Celestial Mechanics** 73
Center of Mass – Orbital Motion Explained –
Newton's Derivation of Kepler's Laws –
Energy of a Two-Body System – The *Vis Viva* Equation –
Masses of Planets and Stars – Orbits of Planets –
Artificial Satellites – Interplanetary Probes

6. **The Problem of More Than Two Bodies** 91
The n -Body Problem – Perturbation Theory –
The Gravitational Effects of Nonspherical Bodies –
Differential Gravitational Forces – Tides – Precession

7. Earth and Sky	113	15. The Minor Planets	325
Rotation of the Earth — Relation of Earth and Sky — The Revolution of the Earth — The Seasons — The Many Motions of the Earth		Bode's Law — Discovery of the Minor Planets — Orbits of the Minor Planets — Physical Nature of the Minor Planets — Total Number of Minor Planets — Naming the Minor Planets — Minor Planets and Celestial Mechanical Problems — Origin of the Minor Planets	
8. Time and the Calendar	135	16. Comets	335
Time of Day — The Date of the Year		Early Investigations — Discovery and Designation — Orbits of Comets — Physical Nature of Comets — Source of Supply of Comets — Collisions of the Earth and Comets	
9. Aspects and Motions of the Moon; Eclipses	155	17. Meteoroids, Meteorites, and Meteors	349
Aspects of the Moon — The Moon's Distance and Size — The True Orbit of the Moon — Shadows and Eclipses — Eclipses of the Sun — Eclipses of the Moon — Ecliptic Limits — Recurrence of Eclipses — Phenomena Related to Eclipses		The Phenomena of a Meteor — Orbits of Sporadic Meteoroids — Meteor Showers — Formation of a Meteor — Fallen Meteorites — Meteorite Falls — Micrometeorites — The Interplanetary Material — The Origin of Meteoritic Material	
10. Electromagnetic Radiation and How It Reacts with Matter	191	18. Triangulation of Space	369
Nature and Properties of Electromagnetic Radiation — The Laws of Geometrical Optics — Spectroscopy in Astronomy — Radiation Laws — Absorption and Emission of Light by Atoms		Triangulation — Relative Distances in the Solar System — Determination of the Length of the Astronomical Unit — Surveying Distances to Stars — Other Methods of Measuring Stellar Distances	
11. Astronomical Instruments	219	19. Motions of Stars	381
Formation of an Image — Properties of an Image — Aberrations of Lenses and Mirrors — The Schmidt Optical System — The Complete Telescope — Astronomical Observations — Atmospheric Limitations — Radio Telescopes — Rocket and Space Observations		Elements of Stellar Motions — The Solar Motion and Peculiar Velocities of Stars — Distances From Stellar Motions	
12. The Solar System in General	249	20. The Light Emitted By and Received From Stars	393
Inventory of the Solar System — The Planets		Stellar Magnitudes — The "Real" Brightnesses of Stars — Colors of Stars — Bolometric Magnitudes and Luminosities	
13. The Earth-Moon System	265	21. Spectra of Stars	405
Appearance from Space — Gross Properties of the Earth and Moon — Atmospheres of the Earth and Moon — Temperatures of the Earth and Moon — The Magnetic Fields of the Earth and Moon — Internal Structures of the Earth and Moon — The Surface of the Moon — A Baseball Game on the Moon		Classification of Stellar Spectra — Spectrum Analysis and the Study of the Stellar Atmospheres	
14. The Other Planets	295	22. Weighing and Measuring the Stars—Binary Stars	421
Mercury — Venus — Mars — Jupiter — Saturn — Uranus — Neptune — Pluto — Are There Unknown Planets? — Life on Other Worlds		Determination of the Sun's Mass — Binary Stars — The Mass- Luminosity Relation — Diameters of Stars	

23. The Stellar Population	445
The Nearest and Brightest Stars — The Hertzsprung-Russell Diagram — The Distribution of the Stars in Space	
24. A Typical Star—The Sun	459
Gross Properties — Outer Layers of the Sun — Phenomena of the Solar Atmosphere — Solar Rotation — The Radio Sun — Solar-Terrestrial Effects	
25. Unusual Stars	479
Stars That Vary in Light — Pulsating Stars — Eruptive Variables — Summary of Variable Stars — Stars With Extended Atmospheres — X-Ray Stars — The Pulsars	
26. The Interstellar Medium	505
Cosmic "Dust" — Interstellar Gas	
27. The Galaxy	523
Size of the Galaxy, and Our Position In It — Revolution of the Sun in the Galaxy — The Mass of the Galaxy — Spiral Structure of the Galaxy — Different Stellar Populations in the Galaxy — Magnetic Fields in the Galaxy	
28. Star Clusters	541
Descriptions of Star Clusters — Dynamics of Star Clusters — Determination of Distances of Clusters — Stellar Populations of Star Clusters	
29. Structure and Energy of Stars	555
Equilibrium in Stars — Stellar Energy — Model Stars	
30. Stellar Evolution	571
Early Stages of Stellar Evolution — Evolution From the Main Sequence to Giants — Later Evolution Stages — Past and Future of the Sun and Solar System	

31. Cosmic Rays	595
Early Investigations and History of Cosmic-Ray Research — Some Properties of Cosmic Rays — Origin of Cosmic Rays	
32. Galaxies	607
Galactic or Extragalactic? — Distances to the Galaxies — Determination of Gross Properties of Galaxies — Types of Galaxies — Clusters of Galaxies — Galaxies as Radio Sources — Quasi-Stellar Sources — Intergalactic Matter — Extent of the Observable Universe	
33. Cosmology	645
The "Expanding Universe" — Cosmological Models — Tests For Cosmological Models	
Appendices	663
1. Bibliography	
2. Glossary	
3. Some Principles of Arithmetic, Algebra, and Geometry	
4. Metric and English Units	
5. Temperature Scales	
6. Mathematical, Physical and Astronomical Constants	
7. Astronomical Coordinate Systems	
8. Nuclear Reactions in Astronomy	
9. Orbital Data for the Planets	
10. Physical Data for the Planets	
11. Satellites of the Planets	
12. The Nearest Stars	
13. The Twenty Brightest Stars	
14. The Messier Catalogue of Nebulae and Star Clusters	
15. The Chemical Elements	
16. The Constellations	
17. Star Maps
