

Contents

| | |
|--|------------|
| Introduction | 1 |
| 1 A survey of the basic principles of modern aerodynamics | 3 |
| 2 From antiquity to the age of Newton | 14 |
| 3 From Newton to the emergence of the field theory of fluid flow | 19 |
| 4 The era of the whirling arm and the invention of the aeroplane | 27 |
| 5 Nineteenth-century developments in the understanding of fluid flow | 42 |
| 6 Practical developments in aeronautics | 51 |
| 7 Frederick William Lanchester (1868–1946) | 57 |
| 8 Lift forces in flowing fluids (Kutta, 1902) Commentary on Kutta (1902) | 70 74 |
| 9 On the motion of fluids with very little friction (Prandtl, 1904) Commentary on Prandtl (1904) | 77 84 |
| 10 On annexed vortices (Zhukovskii, 1906a) Commentary on Zhukovskii (1906a) | 88 105 |
| 11 Boundary layers in fluids with small friction (Blasius, 1908) Introduction | 107 107 |
| I Boundary layer for the steady motion at flat plate immersed parallel to the streamlines | 110 |
| II Calculation of the separation position behind a body immersed in a steady flow | 118 |
| III Emergence of the boundary layer and the separation position with a sudden onset of motion from rest | 125 |
| IV Formation of the separation position with motion uniformly accelerating from rest | 130 |

| | | |
|----|---|-----|
| V | Application of the results of the separation problems to the circular cylinder | 137 |
| | Commentary on Blasius (1908) | 142 |
| 12 | On a two-dimensional flow related to the fundamentals of the problems of flight (Kutta, 1910) | 145 |
| | 1 Introduction | 145 |
| | 2 General expression | 147 |
| | 3 The arched shell of circular form | 149 |
| | 4 The lift force on the shell | 155 |
| | 5 A numerical example: the rounding of the leading edge | 160 |
| | 6 Flat plate and shell under various angles of attack β | 171 |
| | 7 Final considerations | 180 |
| | Commentary on Kutta (1910) | 183 |
| 13 | On the pressure exerted by a plane-parallel flow on obstructing bodies (aeroplane theory) (Chaplygin, 1910) | 186 |
| | 1 Introduction | 186 |
| | 2 Derivation of the general formula for components of the pressure force | 187 |
| | 3 Pressure force in the presence of standing vortices | 189 |
| | 4 The pressure force on a segment of a circular cylinder | 191 |
| | 5 The pressure force acting on a complex wing | 198 |
| | 6 A wing with one cuspidal point | 208 |
| | 7 Other wing forms | 211 |
| | 8 The flow past a plate shaped into a circular arc in the presence of a vortex | 213 |
| | 9 Calculation of the rotating moment | 218 |
| | Commentary on Chaplygin (1910) | 220 |
| 14 | On the contours of the aerofoils of hang gliders (Zhukovskii, 1920) | 223 |
| | Commentary on Zhukovskii (1910) | 229 |
| 15 | Subsequent developments | 232 |
| | References | 234 |
