	Prefac	ce	page vii
1	CFD in Perspective		1
	1.1	The Nature of CFD	1
	1.2	Overview of the Book	3
	1.3	Algorithm, Numerical Method, Implementation and Simulation	5
	1.4	Models and Methods	9
	1.5	Round-off Error	15
	1.6	A Hierarchy of Computation	18
	1.7	Ramification, Turbulence and the Complexity of Fluid Flows	26
	1.8	The Development of Computer Hardware	31
	1.9	Some Remarks on Software	33
2	Мар	bings	35
	2.1	Numerical Methods as Mappings	35
	2.2	Fixed Points: Stability, Instability and Superstability	37
	2.3	Stability of Exact Solution, Implicit and Explicit Approximation	ıs 40
	2.4	More on Mappings	43
	2.5	Random Number Generation	50
	2.6	Newton's Method in the Complex Plane	52
	2.7	Mappings and Fluid Flows	56
3	Ordi	nary Differential Equations: Initial Value Problem	69
	3.1	Some Conventional Wisdom	69
	3.2	Explicit Euler and Implicit Euler Schemes	71
	3.3	Runge–Kutta Methods	77
	3.4	Adams–Bashforth–Moulton Methods	84
	3.5	Other Methods and Considerations	90
	3.6	Bashforth's Problem: Sessile Drop on a Flat Plate	92
	3.7	Flow Due to a Collapsing Bubble	95
	3.8	Motion of a Solid in Ideal Fluid	103
	3.9	The Point-Vortex Equations	106
	3.10	Vortex Sheet Roll-up	111

vi

4	Spatial Discretization		118	
	4.1	Forward, Backward and Central Difference	119	
	4.2	Matrix Derivative Operators	127	
	4.3	Compact Differences	138	
	4.4	Non-uniform Discretization	141	
	4.5	Numerical Interpolation	144	
	4.6	Numerical Integration	149	
5	Boundary Value and Eigenvalue ODEs			
	5.1	Linear Boundary Value Problems	167	
	5.2	Nonlinear Boundary Value Problems	175	
	5.3	Boundary Value Problems in Viscous Flow	184	
	5.4	Eigenvalue Problems	188	
	5.5	Hydrodynamic Instability	192	
6	Methods Based on Functional Expansions			
	6.1	Introduction	210	
	6.2	Fourier Approximation	211	
	6.3	Polynomial Approximation	218	
	6.4	Galerkin, Tau, Collocation and Pseudo-spectral Methods	226	
	6.5	Some Examples	240	
7	Partial Differential Equations			
	7.1	Definitions and Preliminaries	244	
	7.2	The Advection Equation	250	
	7.3	The Diffusion Equation	259	
	7.4	The Advection–Diffusion Equation	262	
	7.5	Godunov's Theorem	267	
	7.6	More on Stability: Non-periodic Boundary Conditions	270	
	7.7	Burgers' Equation	279	
	7.8	Implicit Time-differencing	283	
	7.9	Direct Solution with Matrix Representation	287	
8	Multi-dimensional Partial Differential Equations			
	8.1	Multi-dimensions	293	
	8.2	Navier–Stokes Equations	309	
	8.3	Navier–Stokes Equations in Spectral Form	328	
	8.4	Finite Volume Formulation	334	
	8.5	CFD for Complex Geometries	337	
	8.6	Sharp Interface Cartesian Grid Method	356	
	8.7	Immersed Boundary Method	360
