PREFACE TO THE DOVER EDITION	vii
PREFACE	xi
LIST OF FREQUENTLY USED SYMBOLS	xxiii
1 INTRODUCTION	1
1.1 The helium liquids	1
1.2 Early history of superfluid ^3He	5
1.3 Elementary discussion of superfluid ^3He	7
1.3.1 The internal structure of Cooper pairs	8
1.3.2 Broken symmetry and the order parameter	9
1.3.3 Orientational effects	12
1.3.4 Textures	15
1.3.5 Superfluid mass currents in $^3\text{He-A}$	16
1.3.6 Dynamic properties	17
1.4 Relation to other fields	21
1.5 Reviews and introductory articles on superfluid ^3He	22
1.5.1 General reviews	22
1.5.2 Reviews of specific topics	23
1.5.3 Discussions in books on related subjects	24
1.5.4 Introductory articles	24
2 THEORY OF NORMAL FERMI LIQUIDS	25
2.1 The quasiparticle concept	25
2.2 Thermodynamic properties	28
2.2.1 Entropy and specific heat	28
2.2.2 Spin susceptibility	30
2.2.3 Compressibility	30
2.3 Transport properties	32
2.3.1 Hydrodynamic equations	32
2.3.2 Kinetic equation	33
2.3.3 Quasiparticle lifetime	34
2.3.4 Local equilibrium	37
2.3.5 The linearized collision integral	38
2.3.6 Calculation of the transport coefficients	40

2.4	Collective modes	42
2.5	Theories beyond the Fermi-liquid model	46
2.5.1	Microscopic theories	46
2.5.2	Polarization potential theory	48
2.5.3	Extended Fermi-liquid theory	49
2.5.4	Lattice-gas model	52
2.5.5	Phenomenological approaches	55
2.5.6	Pair interaction	57
	Further reading	59
3	PAIR CORRELATIONS IN THE WEAK-COUPPLING LIMIT	61
3.1	Cooper instability	61
3.2	Generalized pairing theory	64
3.2.1	Generalized BCS wave function	65
3.2.2	Diagonalization of the mean-field Hamiltonian	67
3.2.3	Single-particle excitations	69
3.2.4	Singlet versus triplet pairing	70
3.3	Pairing theory at finite temperature	71
3.3.1	Effective Hamiltonian	72
3.3.2	Gap equation	73
3.3.3	Critical temperature	75
3.3.4	Free energy	76
3.4	Thermodynamic properties of model states	80
3.4.1	p-wave pairing; the BW and ABM states	80
3.4.2	Gap parameter	82
3.4.3	Specific heat	83
3.4.4	Normal-fluid density	84
3.4.5	Spin susceptibility	87
3.5	Expectation value of two-particle quantities	90
	Further reading	92
4	BASIC EXPERIMENTAL PROPERTIES	93
4.1	Experimental techniques for attaining ultralow temperatures	93
4.2	Thermodynamic properties	95
4.2.1	Phase diagram	95
4.2.2	Specific heat	98
4.3	Magnetic properties	100
4.4	Sound propagation	102
4.5	Hydrodynamic properties and superfluidity	106
4.5.1	Normal-fluid density and viscosity	106
4.5.2	Persistent currents	106
4.6	Rotating superfluid ^3He	109
	Further reading	111

5	PAIR CORRELATIONS BEYOND WEAK COUPLING	113
5.1	General Ginzburg–Landau expansion of the free energy	113
5.2	Phenomenological classification of model states	118
5.2.1	Unitary states	118
5.2.2	Relative stability of model states	122
5.3	Spin fluctuations and the stability of the ABM state	123
5.4	Effects of a magnetic field	129
	Further reading	136
6	BROKEN SYMMETRIES AND MACROSCOPIC ORDER	137
6.1	Broken symmetries and group theory	141
6.1.1	The symmetry group describing superfluid ^3He	143
6.1.2	A two-dimensional model of superfluid ^3He	144
6.1.3	Remaining symmetries of the ^3He -A, $-A_1$ and $-B$ order parameters	147
6.2	Symmetry and order-parameter structure	149
6.2.1	Continuous symmetries	150
6.2.2	Discrete symmetries	162
6.2.3	Symmetry and stationary points of a free energy	165
6.2.4	Symmetry reduction due to a magnetic field or spin-orbit coupling	169
6.2.5	Symmetry classification of an exactly solvable case: d-wave pairing	170
6.2.6	Broken symmetries in high-energy physics	172
6.3	Orientation of the order parameter by internal residual interactions and external fields	174
6.3.1	Dipole interaction	174
6.3.2	Orientation induced by a magnetic field	180
6.3.3	Orientation induced by an electric field	181
6.3.4	Effect of superflow	182
6.3.5	Orientalional effects in the B phase due to magnetic and electric fields and superflow	183
6.3.6	Surface energies and boundary conditions	185
	Further reading	188
7	SUPERFLOW AND TEXTURES	189
7.1	Superfluidity	190
7.2	Gradient free energy	194
7.2.1	The A phase	195
7.2.2	The B phase	199
7.2.3	Healing lengths	200

7.3	Supercurrents	202
7.3.1	The A phase	203
7.3.2	Finite normal density at $T = 0$ in the A phase	206
7.3.3	Quantization of circulation	208
7.4	Topological investigation of defects	211
7.5	Linear defects	219
7.5.1	Topological stability	219
7.5.2	Topological properties of B-phase vortices	220
7.5.3	Topological properties of A-phase vortices at small distances	223
7.5.4	Topological properties of A-phase vortices at large distances	231
7.5.5	Symmetry classification of vortices	233
7.5.6	Axisymmetric vortices	235
7.5.7	Energetics of vortices	238
7.5.8	Vortices in the A phase	240
7.5.9	Vortices in the B phase	245
7.5.10	Magnetic properties of vortices in the B phase	252
7.6	Rotating superfluid ^3He	257
7.6.1	Isotropic superfluid	257
7.6.2	Superfluid ^3He	259
7.7	Point defects	263
7.7.1	The B phase	264
7.7.2	The A phase	265
7.8	Planar defects	267
7.8.1	Topological classification	267
7.8.2	Planar solitons in the A phase	272
7.8.3	Planar solitons in the B phase	278
7.9	Surface-induced textures	280
7.9.1	$^3\text{He-B}$ in a slab	281
7.9.2	$^3\text{He-B}$ in a cylinder	283
7.9.3	$^3\text{He-A}$ in a slab	286
7.9.4	$^3\text{He-A}$ in a cylinder	288
7.9.5	$^3\text{He-A}$ in a sphere	292
7.10	Stability of superflow and related textural transitions in $^3\text{He-A}$	294
7.10.1	Stability of superflow in the bulk liquid	295
7.10.2	The helical instability of the uniform \hat{l} texture	302
7.10.3	Textures and superflow in the presence of boundaries	312
7.10.4	The effect of superflow on domain walls	313
7.10.5	Flow-induced dynamical textures	319
7.11	Pair-breaking critical currents	321
7.11.1	The B phase	323
7.11.2	The A phase	326
7.12	Dissipation of superflow	326
7.12.1	Superfluid ^4He	327
7.12.2	The B phase	329
7.12.3	The A phase	331
	Further reading	337

8	SPIN DYNAMICS	339
8.1	Derivation of the equations of motion	340
8.2	Nuclear magnetic resonance under linear spatially homogeneous conditions	342
8.2.1	Limit of zero magnetic field	344
8.2.2	Effect of the magnetic field on NMR	345
8.3	Nonlinear NMR phenomena in uniform textures	348
8.3.1	The Leggett equations for the A and B phases	348
8.3.2	Spin dynamics in zero magnetic field	349
8.3.3	Nonlinear spin dynamics in the A phase	355
8.3.4	Nonlinear spin dynamics in the B phase	359
8.4	Texture-induced magnetic resonance phenomena	362
8.4.1	Tilted uniform textures	363
8.4.2	NMR shifts induced by superflow	364
8.4.3	General theory of texture-induced NMR shifts in the A phase	365
8.4.4	Dynamics of solitons in the A phase	376
8.4.5	NMR signature of solitons in the A phase	377
8.4.6	General theory of texture-induced NMR shifts in the B phase	383
8.5	NMR in rotating superfluid ^3He	389
8.5.1	The A phase	389
8.5.2	The B phase	390
8.6	Spin-relaxation phenomena	394
	Further reading	403
9	HYDRODYNAMIC THEORY	405
9.1	General principles	406
9.1.1	Thermodynamic identities	406
9.1.2	Standard procedure for deriving hydrodynamic equations	407
9.1.3	Equations of motion for the symmetry variables	409
9.2	Hydrodynamic equations for the B phase	411
9.2.1	The thermodynamic identity and equilibrium conditions	412
9.2.2	Hydrodynamic equations for the symmetry variables	413
9.2.3	Hydrodynamic equations for the conserved quantities	414
9.3	Hydrodynamic equations for the A phase	416
9.3.1	The concept of an intrinsic angular momentum	417
9.3.2	Equations of motion for the symmetry variables	418
9.3.3	Thermodynamic identities and equilibrium conditions	420
9.3.4	Entropy production	423
9.3.5	Derivation of the hydrodynamic currents	425
9.3.6	Further consequences of an intrinsic orbital angular momentum	427

9.4	Hydrodynamics for finite magnetic field	429
9.4.1	The A phase in a magnetic field	430
9.4.2	The B phase in a magnetic field	432
	Further reading	434
10	TRANSPORT PROPERTIES	435
10.1	Kinetic equations	437
10.1.1	Matrix kinetic equation	438
10.1.2	Conserved quantities and conservation laws	440
10.1.3	Kinetic equation for Bogoliubov quasiparticles	442
10.1.4	Gauge transformation of the kinetic equation	445
10.1.5	Gauge-invariant densities and currents	447
10.2	Collision integral	450
10.2.1	Matrix operator for binary collision processes	450
10.2.2	Conservation properties of the collision integral	453
10.2.3	Collision integral for Bogoliubov quasiparticles	454
10.2.4	Relaxation-time approximation	456
10.2.5	Bogoliubov-quasiparticle relaxation rate	457
10.3	Transport coefficients	461
10.3.1	Transport coefficients of the B phase	464
10.3.2	Intrinsic spin relaxation	475
10.3.3	Transport coefficients of the A phase	479
10.4	Flow in restricted geometries	484
10.4.1	Slip correction to hydrodynamics	484
10.4.2	Andreev reflection	486
10.4.3	Poiseuille flow	489
10.4.4	Vibrating-wire experiments	491
10.4.5	Sound propagation and other flow problems	491
10.4.6	Superfluidity in ^3He films	494
10.4.7	Ion mobility	496
	Further reading	499
11	COLLECTIVE MODES	501
11.1	Hydrodynamic modes	502
11.1.1	Sound modes	502
11.1.2	Spin-wave modes	505
11.1.3	Other hydrodynamic modes	511
11.2	Symmetry classification of order-parameter modes in the collisionless regime	511
11.2.1	The B phase	512
11.2.2	The A phase	515
11.3	Time-dependent mean-field theory in the collisionless regime	519
11.3.1	Collective modes in the B phase	523
11.3.2	Collective modes in the A phase	526
11.3.3	Effect of residual interactions	533

11.3.4	Observability of collective modes	534
11.4	Collisionless sound	535
11.4.1	Phenomenological model	536
11.4.2	Sound propagation in the B phase	538
11.4.3	Sound propagation in the A phase	543
11.4.4	Nonlinear effects of sound propagation	546
11.4.5	Transverse sound and spin waves	546
	Further reading	547
12	AMPLIFICATION OF WEAK INTERACTION EFFECTS DUE TO MACROSCOPIC QUANTUM COHERENCE	549
12.1	Properties of the BCS pair wave function	550
12.2	The permanent orbital magnetic moment of the A phase	553
12.3	The permanent electric dipole moment of the B phase	555
	Further reading	560
