<i>Preface</i>	page vii
<i>Acronyms</i>	x
Introduction	1
1 Invariance and Quantization of Charges and Currents	5
1.1 Polarization, Adiabatic Currents, and Surface Charge	8
1.2 Orbital Magnetization and Surface Currents	23
1.3 Edge Channels and Anomalous Hall Conductivity	26
1.4 Recap and Preview	35
2 Review of Electronic Structure Theory	38
2.1 Electronic Hamiltonian and Bloch Functions	38
2.2 Tight-Binding Model Hamiltonians	53
2.3 Linear Response Theory	69
3 Berry Phases and Curvatures	75
3.1 Berry Phase, Gauge Freedom, and Parallel Transport	75
3.2 Berry Curvature and the Chern Theorem	87
3.3 Adiabatic Dynamics	97
3.4 Berryology of the Brillouin Zone	103
3.5 Wannier Functions	112
3.6 Multiband Formulation	122
4 Electric Polarization	141
4.1 Statement of the Problem	141
4.2 Berry-Phase Theory of Polarization	145
4.3 Discussion	158
4.4 Questions of Interpretation	173
4.5 Surface Charge Theorem	181
4.6 Uniform Electric Fields	199

5	Topological Insulators and Semimetals	201
5.1	Quantum Anomalous Hall Insulators	202
5.2	Quantum Spin Hall Insulators	225
5.3	Three-Dimensional \mathbb{Z}_2 Topological Insulators	239
5.4	Weyl Semimetals	252
5.5	Other Topological Systems	268
6	Orbital Magnetization and Axion Coupling	276
6.1	Orbital Magnetization	276
6.2	Magnetoelectric Coupling and Surface Anomalous Hall Conductivity	285
6.3	Chern–Simons Axion Coupling	292
6.4	Axion Electrodynamics	305
	<i>Appendix A</i> Fourier Transform Conventions	316
	<i>Appendix B</i> Optimal Alignment and the Singular Value Decomposition	319
	<i>Appendix C</i> Gauge Transformation of the Chern–Simons Axion Coupling	321
	<i>Appendix D</i> The PYHTB Package	327
	<i>References</i>	363
	<i>Index</i>	374
