

Table of Contents

<i>Preface</i>	<i>xiii</i>
1 Fiber Optic Fundamentals	1
1.1 Refraction and Total Internal Reflection	1
1.2 Meridional Rays	3
1.3 Skew Rays	4
1.4 Bent Fibers	5
1.5 Mechanisms of Attenuation	6
1.6 Waveguide Propagation	8
1.7 Evanescent Wave	11
1.8 Cross Coupling	12
1.9 Scattering	12
1.10 Mode Patterns	13
1.11 Fiber Types	14
1.12 Polarization-Maintaining Fibers	16
References	19
2 Fiber Optic Sensor Fundamentals	21
2.1 Background	21
2.2 Sensor Categories	24
2.3 Distributed Fiber Optic Systems	28
References	29
3 Intensity-Modulated Sensors	31
3.1 Introduction	31
3.2 Transmissive Concept	31
3.3 Reflective Concept	33
3.4 Microbending Concept	34
3.5 Intrinsic Concept	36
3.6 Transmission and Reflection with Other Optical Effects	37
3.7 Speckle Pattern	41
3.8 Sources of Error and Compensation Schemes	41
References	44

4 Phase-Modulated Sensors	47
4.1 Introduction	47
4.2 Interferometers	50
4.2.1 Mach-Zehnder	50
4.2.2 Michelson	50
4.2.3 Fabry-Pérot	51
4.2.4 Sagnac	52
4.3 Phase Detection	53
4.4 Detection Schemes	56
4.5 Practical Considerations	59
References	60
5 Wavelength-Modulated Sensors	63
5.1 Introduction	63
5.2 Bragg Grating Concept	63
5.3 Bragg Grating Sensors	68
5.4 Distributed Sensing	73
5.5 Wavelength Detection Schemes	74
5.6 Harsh Environments	77
References	77
6 Scattering-Based Sensors	79
6.1 Absorption and Transmission Loss in Optical Fibers	79
6.2 Optical Time-Domain Reflectometry (OTDR)	80
6.3 Light-Scattering Mechanisms	85
6.3.1 Elastic versus inelastic scattering	86
6.3.2 Stokes and anti-Stokes scattering components	87
6.3.3 Scattering emission spectrum	88
6.4 Rayleigh Scattering	89
6.5 Raman Scattering	91
6.6 Brillouin Scattering	93
6.6.1 Stimulated Brillouin scattering	94
6.7 Distributed Fiber Sensing and Scattering Effects	95
References	96
7 Polarization-Based Sensors	97
7.1 Introduction	97
7.2 Analysis of Birefringent Optical Systems	97
7.3 Birefringent Effects in Bragg Gratings	100
7.4 Application Examples	102
References	104
8 Digital Switches and Counters	107
8.1 Introduction	107
8.2 Scan Modes	107
8.3 Excess Gain	110

8.4 Contrast	110
8.5 Beam Diameter	113
8.6 Electro-Optic Interface	113
8.7 Applications	115
References	123
9 Displacement Sensors	125
9.1 Introduction	125
9.2 Reflective Technology	125
9.3 Microbending Technology	133
9.4 Modulating Technology	141
9.5 Fabry-Pérot Technology	141
9.6 Bragg Grating Technologies	142
9.7 Applications	144
References	148
10 Strain Sensors	151
10.1 Bragg Grating Strain Sensors	151
10.2 Interferometric Strain Sensors	158
10.3 Applications	161
References	163
11 Temperature Sensors	165
11.1 Introduction	165
11.2 Reflectance and Absorbance Sensors	166
11.3 Fluorescence Sensors	170
11.4 Microbending Sensors	173
11.5 Blackbody Radiation	175
11.6 Doped Fibers	175
11.7 Interferometric Sensors	177
11.8 Fiber Bragg Grating Sensors	180
11.9 Distributed Temperature Sensing (DTS)	182
11.10 Applications	186
References	187
12 Pressure Sensors	191
12.1 Introduction	191
12.2 Conventional and Specialized	192
12.3 FBG-based Optical Sensors	194
12.4 Fabry-Pérot-based Optical Sensors	197
12.5 Packaging	198
12.6 Field Installation	199
References	201
13 Flow Sensors	203
13.1 Introduction	203
13.2 Turbine Flowmeters	203

13.3	Cantilevered-Beam Flow Sensors	205
13.4	Differential-Pressure Flow Sensor	207
13.5	Vortex-Shedding Flow Sensor	208
13.6	Laser Doppler Velocity Sensors	210
13.7	Indirect Flow Monitoring	211
13.8	Applications	212
	References	212
14	Magnetic and Electric Field Sensors	215
14.1	Introduction	215
14.2	Magnetic Field	216
14.2.1	Faraday rotation-based sensors	216
14.2.2	Phase modulation	221
14.3	Electric Field	224
14.3.1	Polarization modulation	224
14.3.2	Phase modulation	226
	References	227
15	Chemical Analysis	233
15.1	Introduction	233
15.2	Fluorescence	233
15.3	Absorption	238
15.4	Scattering	241
15.5	Refractive Index Change	245
15.6	Color Changes	248
15.7	Interferometry	248
15.8	Distributed Fiber Optic Chemical Sensors	248
15.9	Fiber-Optics-Enabled Spectroscopy	249
15.10	Applications	250
	References	251
16	Biophotonic Sensors	255
16.1	Introduction	255
16.2	Intrinsic Biophotonic Sensors	255
16.2.1	Intrinsic biophotonic sensors: evanescent wave interaction	256
16.2.2	Intrinsic biophotonic sensors: using photonic crystal fibers	259
16.2.3	Intrinsic biophotonic sensors: fluorescent microsphere array sensors	260
16.2.4	Intrinsic biophotonic sensors: distributed sensor concepts	263
16.2.5	Intrinsic biophotonic sensors: surface plasmon resonance	263
16.3	Extrinsic Biophotonic Sensors	264
	References	267
17	Rotation Rate Sensors (Gyroscopes)	269
17.1	Introduction	269
17.2	Sensor Mechanism	269

17.3	Reciprocity	277
17.4	Noise Limitations	278
17.5	Resonators	280
17.6	Comparison of Resonator (RFOG) and Interferometer (IFOG) Gyroscopes	283
	References	283
18	Distributed Sensing Systems	287
18.1	Introduction	287
18.2	Applications	288
18.3	Distributed Temperature Sensing Applications in the Oil and Gas Industry	289
18.4	Brillouin Sensors	294
18.5	Distributed Acoustic Sensors	298
18.6	Quasi-distributed Sensing Systems	303
	References	303
19	Market Opportunities	307
19.1	Introduction	307
19.2	Barriers to Market Growth	308
19.3	Summary and Conclusions	309
	References	310
