

CONTENTS

Preface	xvii	2.3 Discrete-Time Systems	47
1 Introduction	1	2.3.1 Analysis of Linear, Time-Invariant Systems / 2.3.2 Response to Periodic Inputs / 2.3.3 Correlation Analysis and Spectral Density	
1.1 Random Signals	1	2.4 Minimum-Phase and System Invertibility	54
1.2 Spectral Estimation	8	2.4.1 System Invertibility and Minimum-Phase Systems / 2.4.2 All-Pass Systems / 2.4.3 Minimum-Phase and All-Pass Decomposition / 2.4.4 Spectral Factorization	
1.3 Signal Modeling	11	2.5 Lattice Filter Realizations	64
1.3.1 Rational or Pole-Zero Models / 1.3.2 Fractional Pole-Zero Models and Fractal Models		2.5.1 All-Zero Lattice Structures / 2.5.2 All-Pole Lattice Structures	
1.4 Adaptive Filtering	16	2.6 Summary	70
1.4.1 Applications of Adaptive Filters / 1.4.2 Features of Adaptive Filters		Problems	70
1.5 Array Processing	25	3 Random Variables, Vectors, and Sequences	75
1.5.1 Spatial Filtering or Beamforming / 1.5.2 Adaptive Interference Mitigation in Radar Systems / 1.5.3 Adaptive Sidelobe Canceler		3.1 Random Variables	75
1.6 Organization of the Book	29	3.1.1 Distribution and Density Functions / 3.1.2 Statistical Averages / 3.1.3 Some Useful Random Variables	
2 Fundamentals of Discrete-Time Signal Processing	33	3.2 Random Vectors	83
2.1 Discrete-Time Signals	33	3.2.1 Definitions and Second-Order Moments / 3.2.2 Linear Transformations of Random Vectors / 3.2.3 Normal Random Vectors / 3.2.4 Sums of Independent Random Variables	
2.1.1 Continuous-Time, Discrete-Time, and Digital Signals / 2.1.2 Mathematical Description of Signals / 2.1.3 Real-World Signals		3.3 Discrete-Time Stochastic Processes	97
2.2 Transform-Domain Representation of Deterministic Signals	37	3.3.1 Description Using Probability Functions / 3.3.2 Second-Order Statistical Description / 3.3.3 Stationarity /	
2.2.1 Fourier Transforms and Fourier Series / 2.2.2 Sampling of Continuous-Time Signals / 2.2.3 The Discrete Fourier Transform / 2.2.4 The z-Transform / 2.2.5 Representation of Narrowband Signals			

3.3.4 Ergodicity / 3.3.5 Random Signal Variability / 3.3.6 Frequency-Domain Description of Stationary Processes		4.4 Pole-Zero Models	177
3.4 Linear Systems with Stationary Random Inputs	115	4.4.1 Model Properties / 4.4.2 Autoregressive Moving-Average Models / 4.4.3 The First-Order Pole-Zero Model 1: PZ (1, 1) / 4.4.4 Summary and Dualities	
3.4.1 Time-Domain Analysis / 3.4.2 Frequency-Domain Analysis / 3.4.3 Random Signal Memory / 3.4.4 General Correlation Matrices / 3.4.5 Correlation Matrices from Random Processes		4.5 Models with Poles on the Unit Circle	182
3.5 Whitening and Innovations Representation	125	4.6 Cepstrum of Pole-Zero Models	184
3.5.1 Transformations Using Eigen-decomposition / 3.5.2 Transformations Using Triangular Decomposition / 3.5.3 The Discrete Karhunen-Loève Transform		4.6.1 Pole-Zero Models / 4.6.2 All-Pole Models / 4.6.3 All-Zero Models	
3.6 Principles of Estimation Theory	133	4.7 Summary	189
3.6.1 Properties of Estimators / 3.6.2 Estimation of Mean / 3.6.3 Estimation of Variance		Problems	189
3.7 Summary	142	5 Nonparametric Power Spectrum Estimation	195
Problems	143	5.1 Spectral Analysis of Deterministic Signals	196
4 Linear Signal Models	149	5.1.1 Effect of Signal Sampling / 5.1.2 Windowing, Periodic Extension, and Extrapolation / 5.1.3 Effect of Spectrum Sampling / 5.1.4 Effects of Windowing: Leakage and Loss of Resolution / 5.1.5 Summary	
4.1 Introduction	149	5.2 Estimation of the Autocorrelation of Stationary Random Signals	209
4.1.1 Linear Nonparametric Signal Models / 4.1.2 Parametric Pole-Zero Signal Models / 4.1.3 Mixed Processes and the Wold Decomposition		5.3 Estimation of the Power Spectrum of Stationary Random Signals	212
4.2 All-Pole Models	156	5.3.1 Power Spectrum Estimation Using the Periodogram / 5.3.2 Power Spectrum Estimation by Smoothing a Single Periodogram—The Blackman-Tukey Method / 5.3.3 Power Spectrum Estimation by Averaging Multiple Periodograms—The Welch-Bartlett Method / 5.3.4 Some Practical Considerations and Examples	
4.2.1 Model Properties / 4.2.2 All-Pole Modeling and Linear Prediction / 4.2.3 Autoregressive Models / 4.2.4 Lower-Order Models			
4.3 All-Zero Models	172		
4.3.1 Model Properties / 4.3.2 Moving-Average Models / 4.3.3 Lower-Order Models			

5.4 Joint Signal Analysis	237	<i>Linear Prediction Using the Infinite Past—Whitening</i>	
5.4.1 Estimation of Cross-Power Spectrum / 5.4.2 Estimation of Frequency Response Functions			
5.5 Multitaper Power Spectrum Estimation	246	6.7 Inverse Filtering and Deconvolution	306
5.5.1 Estimation of Auto Power Spectrum / 5.5.2 Estimation of Cross Power Spectrum		6.8 Channel Equalization in Data Transmission Systems	310
5.6 Summary Problems	254 255	6.8.1 Nyquist's Criterion for Zero ISI / 6.8.2 Equivalent Discrete-Time Channel Model / 6.8.3 Linear Equalizers / 6.8.4 Zero-Forcing Equalizers / 6.8.5 Minimum MSE Equalizers	
6 Optimum Linear Filters	261	6.9 Matched Filters and Eigenfilters	319
6.1 Optimum Signal Estimation	261	6.9.1 Deterministic Signal in Noise / 6.9.2 Random Signal in Noise	
6.2 Linear Mean Square Error Estimation	264	6.10 Summary Problems	325 325
6.2.1 Error Performance Surface / 6.2.2 Derivation of the Linear MMSE Estimator / 6.2.3 Principal-Component Analysis of the Optimum Linear Estimator / 6.2.4 Geometric Interpretations and the Principle of Orthogonality / 6.2.5 Summary and Further Properties		7 Algorithms and Structures for Optimum Linear Filters	333
6.3 Solution of the Normal Equations	274	7.1 Fundamentals of Order-Recursive Algorithms	334
6.4 Optimum Finite Impulse Response Filters	278	7.1.1 Matrix Partitioning and Optimum Nesting / 7.1.2 Inversion of Partitioned Hermitian Matrices / 7.1.3 Levinson Recursion for the Optimum Estimator / 7.1.4 Order-Recursive Computation of the LDL^H Decomposition / 7.1.5 Order-Recursive Computation of the Optimum Estimate	
6.4.1 Design and Properties / 6.4.2 Optimum FIR Filters for Stationary Processes / 6.4.3 Frequency-Domain Interpretations		7.2 Interpretations of Algorithmic Quantities	343
6.5 Linear Prediction	286	7.2.1 Innovations and Backward Prediction / 7.2.2 Partial Correlation / 7.2.3 Order Decomposition of the Optimum Estimate / 7.2.4 Gram-Schmidt Orthogonalization	
6.5.1 Linear Signal Estimation / 6.5.2 Forward Linear Prediction / 6.5.3 Backward Linear Prediction / 6.5.4 Stationary Processes / 6.5.5 Properties		7.3 Order-Recursive Algorithms for Optimum FIR Filters	347
6.6 Optimum Infinite Impulse Response Filters	295	7.3.1 Order-Recursive Computation of the Optimum Filter / 7.3.2	
6.6.1 Noncausal IIR Filters / 6.6.2 Causal IIR Filters / 6.6.3 Filtering of Additive Noise / 6.6.4			

<i>Lattice-Ladder Structure / 7.3.3 Simplifications for Stationary Stochastic Processes / 7.3.4 Algorithms Based on the UDU^H Decomposition</i>		8.4 Linear Least-Squares Signal Estimation	411
7.4 Algorithms of Levinson and Levinson-Durbin	355	8.4.1 Signal Estimation and Linear Prediction / 8.4.2 Combined Forward and Backward Linear Prediction (FBLP) / 8.4.3 Narrowband Interference Cancellation	
7.5 Lattice Structures for Optimum FIR Filters and Predictors	361	8.5 LS Computations Using the Normal Equations	416
7.5.1 Lattice-Ladder Structures / 7.5.2 Some Properties and Interpretations / 7.5.3 Parameter Conversions		8.5.1 Linear LSE Estimation / 8.5.2 LSE FIR Filtering and Prediction	
7.6 Algorithm of Schür	368	8.6 LS Computations Using Orthogonalization Techniques	422
7.6.1 Direct Schür Algorithm / 7.6.2 Implementation Considerations / 7.6.3 Inverse Schür Algorithm		8.6.1 Householder Reflections / 8.6.2 The Givens Rotations / 8.6.3 Gram-Schmidt Orthogonalization	
7.7 Triangularization and Inversion of Toeplitz Matrices	374	8.7 LS Computations Using the Singular Value Decomposition	431
7.7.1 LDL^H Decomposition of Inverse of a Toeplitz Matrix / 7.7.2 LDL^H Decomposition of a Toeplitz Matrix / 7.7.3 Inversion of Real Toeplitz Matrices		8.7.1 Singular Value Decomposition / 8.7.2 Solution of the LS Problem / 8.7.3 Rank-Deficient LS Problems	
7.8 Kalman Filter Algorithm	378	8.8 Summary Problems	438 439
7.8.1 Preliminary Development / 7.8.2 Development of Kalman Filter		9 Signal Modeling and Parametric Spectral Estimation	445
7.9 Summary Problems	387 389	9.1 The Modeling Process: Theory and Practice	445
8 Least-Squares Filtering and Prediction	395	9.2 Estimation of All-Pole Models	449
8.1 The Principle of Least Squares	395	9.2.1 Direct Structures / 9.2.2 Lattice Structures / 9.2.3 Maximum Entropy Method / 9.2.4 Excitations with Line Spectra	
8.2 Linear Least-Squares Error Estimation	396	9.3 Estimation of Pole-Zero Models	462
8.2.1 Derivation of the Normal Equations / 8.2.2 Statistical Properties of Least-Squares Estimators		9.3.1 Known Excitation / 9.3.2 Unknown Excitation / 9.3.3	
8.3 Least-Squares FIR Filters	406		

<i>Nonlinear Least-Squares Optimization</i>	
9.4	Applications 467
	9.4.1 <i>Spectral Estimation</i> /
	9.4.2 <i>Speech Modeling</i>
9.5	Minimum-Variance Spectrum Estimation 471
9.6	Harmonic Models and Frequency Estimation Techniques 478
	9.6.1 <i>Harmonic Model</i> /
	9.6.2 <i>Pisarenko Harmonic Decomposition</i> / 9.6.3 <i>MUSIC Algorithm</i> / 9.6.4 <i>Minimum-Norm Method</i> / 9.6.5 <i>ESPRIT Algorithm</i>
9.7	Summary 493
	Problems 494
10	Adaptive Filters 499
10.1	Typical Applications of Adaptive Filters 500
	10.1.1 <i>Echo Cancellation in Communications</i> / 10.1.2 <i>Equalization of Data Communications Channels</i> / 10.1.3 <i>Linear Predictive Coding</i> / 10.1.4 <i>Noise Cancellation</i>
10.2	Principles of Adaptive Filters 506
	10.2.1 <i>Features of Adaptive Filters</i> / 10.2.2 <i>Optimum versus Adaptive Filters</i> / 10.2.3 <i>Stability and Steady-State Performance of Adaptive Filters</i> / 10.2.4 <i>Some Practical Considerations</i>
10.3	Method of Steepest Descent 516
10.4	Least-Mean-Square Adaptive Filters 524
	10.4.1 <i>Derivation</i> / 10.4.2 <i>Adaptation in a Stationary SOE</i> / 10.4.3 <i>Summary and Design Guidelines</i> / 10.4.4 <i>Applications of the LMS Algorithm</i> / 10.4.5 <i>Some Practical Considerations</i>

10.5	Recursive Least-Squares Adaptive Filters 548
	10.5.1 <i>LS Adaptive Filters</i> / 10.5.2 <i>Conventional Recursive Least-Squares Algorithm</i> / 10.5.3 <i>Some Practical Considerations</i> / 10.5.4 <i>Convergence and Performance Analysis</i>
10.6	RLS Algorithms for Array Processing 560
	10.6.1 <i>LS Computations Using the Cholesky and QR Decompositions</i> / 10.6.2 <i>Two Useful Lemmas</i> / 10.6.3 <i>The QR-RLS Algorithm</i> / 10.6.4 <i>Extended QR-RLS Algorithm</i> / 10.6.5 <i>The Inverse QR-RLS Algorithm</i> / 10.6.6 <i>Implementation of QR-RLS Algorithm Using the Givens Rotations</i> / 10.6.7 <i>Implementation of Inverse QR-RLS Algorithm Using the Givens Rotations</i> / 10.6.8 <i>Classification of RLS Algorithms for Array Processing</i>
10.7	Fast RLS Algorithms for FIR Filtering 573
	10.7.1 <i>Fast Fixed-Order RLS FIR Filters</i> / 10.7.2 <i>RLS Lattice-Ladder Filters</i> / 10.7.3 <i>RLS Lattice-Ladder Filters Using Error Feedback Updatings</i> / 10.7.4 <i>Givens Rotation-Based LS Lattice-Ladder Algorithms</i> / 10.7.5 <i>Classification of RLS Algorithms for FIR Filtering</i>
10.8	Tracking Performance of Adaptive Algorithms 590
	10.8.1 <i>Approaches for Nonstationary SOE</i> / 10.8.2 <i>Preliminaries in Performance Analysis</i> / 10.8.3 <i>The LMS Algorithm</i> / 10.8.4 <i>The RLS Algorithm with Exponential Forgetting</i> / 10.8.5 <i>Comparison of Tracking Performance</i>
10.9	Summary 607
	Problems 608

11	Array Processing 621
11.1	Array Fundamentals 622
	11.1.1 <i>Spatial Signals</i> / 11.1.2 <i>Modulation-Demodulation</i> / 11.1.3 <i>Array Signal Model</i> / 11.1.4 <i>The Sensor Array: Spatial Sampling</i>
11.2	Conventional Spatial Filtering: Beamforming 631
	11.2.1 <i>Spatial Matched Filter</i> / 11.2.2 <i>Tapered Beamforming</i>
11.3	Optimum Array Processing 641
	11.3.1 <i>Optimum Beamforming</i> / 11.3.2 <i>Eigenanalysis of the Optimum Beamformer</i> / 11.3.3 <i>Interference Cancellation Performance</i> / 11.3.4 <i>Tapered Optimum Beamforming</i> / 11.3.5 <i>The Generalized Sidelobe Canceler</i>
11.4	Performance Considerations for Optimum Beamformers 652
	11.4.1 <i>Effect of Signal Mismatch</i> / 11.4.2 <i>Effect of Bandwidth</i>
11.5	Adaptive Beamforming 659
	11.5.1 <i>Sample Matrix Inversion</i> / 11.5.2 <i>Diagonal Loading with the SMI Beamformer</i> / 11.5.3 <i>Implementation of the SMI Beamformer</i> / 11.5.4 <i>Sample-by-Sample Adaptive Methods</i>
11.6	Other Adaptive Array Processing Methods 671
	11.6.1 <i>Linearly Constrained Minimum-Variance Beamformers</i> / 11.6.2 <i>Partially Adaptive Arrays</i> / 11.6.3 <i>Sidelobe Cancelers</i>
11.7	Angle Estimation 678
	11.7.1 <i>Maximum-Likelihood Angle Estimation</i> / 11.7.2 <i>Cramér-Rao Lower Bound on Angle Accuracy</i> / 11.7.3 <i>Beamsplitting Algorithms</i> / 11.7.4 <i>Model-Based Methods</i>

11.8	Space-Time Adaptive Processing 683
11.9	Summary 685
	Problems 686
12	Further Topics 691
12.1	Higher-Order Statistics in Signal Processing 691
	12.1.1 <i>Moments, Cumulants, and Polyspectra</i> / 12.1.2 <i>Higher-Order Moments and LTI Systems</i> / 12.1.3 <i>Higher-Order Moments of Linear Signal Models</i>
12.2	Blind Deconvolution 697
12.3	Unsupervised Adaptive Filters—Blind Equalizers 702
	12.3.1 <i>Blind Equalization</i> / 12.3.2 <i>Symbol Rate Blind Equalizers</i> / 12.3.3 <i>Constant-Modulus Algorithm</i>
12.4	Fractionally Spaced Equalizers 709
	12.4.1 <i>Zero-Forcing Fractionally Spaced Equalizers</i> / 12.4.2 <i>MMSE Fractionally Spaced Equalizers</i> / 12.4.3 <i>Blind Fractionally Spaced Equalizers</i>
12.5	Fractional Pole-Zero Signal Models 716
	12.5.1 <i>Fractional Unit-Pole Model</i> / 12.5.2 <i>Fractional Pole-Zero Models: FPZ (p, d, q)</i> / 12.5.3 <i>Symmetric α-Stable Fractional Pole-Zero Processes</i>
12.6	Self-Similar Random Signal Models 725
	12.6.1 <i>Self-Similar Stochastic Processes</i> / 12.6.2 <i>Fractional Brownian Motion</i> / 12.6.3 <i>Fractional Gaussian Noise</i> / 12.6.4 <i>Simulation of Fractional Brownian Motions and Fractional Gaussian Noises</i> / 12.6.5 <i>Estimation of Long Memory</i> /

	<i>12.6.6 Fractional Lévy Stable Motion</i>		D.2	Matrices	756
12.7	Summary	741		<i>D.2.1 Some Definitions / D.2.2 Properties of Square Matrices</i>	
	Problems	742	D.3	Determinant of a Square Matrix	760
Appendix A	Matrix Inversion Lemma	745		<i>D.3.1 Properties of the Determinant / D.3.2 Condition Number</i>	
Appendix B	Gradients and Optimization in Complex Space	747	D.4	Unitary Matrices	762
B.1	Gradient	747		<i>D.4.1 Hermitian Forms after Unitary Transformations / D.4.2 Significant Integral of Quadratic and Hermitian Forms</i>	
B.2	Lagrange Multipliers	749	D.5	Positive Definite Matrices	764
Appendix C	MATLAB Functions	753	Appendix E	Minimum Phase Test for Polynomials	767
Appendix D	Useful Results from Matrix Algebra	755	Bibliography		769
D.1	Complex-Valued Vector Space	755	Index		787
	<i>Some Definitions</i>
