Contents

	Preface to the first paperback edition	*page* xiv
	Preface	xv
1	The purpose of the book	xv
2	Survey of contents	xvi
3	How to use the book	xvii
4	Notation, terminology and conventions	xvii
5	Acknowledgements	xviii
1	**Introduction**	1
2	**Descriptive methods**	15
2.1	Introduction	15
2.2	Data display	15
2.3	Simple summary quantities	30
2.3.1	Sample trigonometric moments	30
2.3.2	Other measures of location and spread	35
2.3.3	Linear order statistics and circular ranks	37
2.4	Modifications for axial data	37
3	**Models**	39
3.1	Introduction	39
3.2	Notation; trigonometric moments	40
3.2.1	Probability density functions and distribution functions	40
3.2.2	Trigonometric moments and other population characteristics	41
3.3	Probability distributions on the circle	43
3.3.1	The uniform distribution U_c	43
3.3.2	The Cardioid distribution $C(\mu, \rho)$	44
3.3.3	Wrapped distributions – general	45
3.3.4	The Wrapped Cauchy distribution $WC(\mu, \rho)$	46
3.3.5	The Wrapped Normal distribution $WN(\mu, \rho)$	47

3.3.6 The von Mises distribution $VM(\mu, \kappa)$ 48
3.3.7 Other models for circular data 56

4 Analysis of a single sample of data 59
4.1 Introduction 59
4.2 Exploratory analysis 62
4.3 Testing a sample of unit vectors for uniformity 64
4.4 Nonparametric methods for unimodal data 72
4.4.1 Introduction 72
4.4.2 Estimation of the median direction 72
4.4.3 Testing the median direction for a specified value 73
4.4.4 Estimation of the mean direction 75
4.4.5 Testing a mean direction for a specified value 79
4.4.6 Testing for symmetry 80
4.5 Statistical analysis of a random sample of unit vectors from a von Mises distribution 81
4.5.1 Introduction 81
4.5.2 Test for uniformity against a von Mises alternative 82
4.5.3 Goodness-of-fit for the von Mises model 82
4.5.4 Outlier test for discordancy for von Mises data 85
4.5.5 Parameter estimation for the von Mises distribution 88
4.5.6 Test for a specified mean direction or concentration parameter of a von Mises distribution 93
4.6 Statistical analysis of a random sample of unit vectors from a multimodal distribution 96
4.6.1 Fitting a mixture of two von Mises distributions 97
4.6.2 A test for the number of components in a mixture of von Mises distributions 100
4.7 Other topics 102

5 Analysis of two or more samples, and of other experimental layouts 105
5.1 Introduction 105
5.2 Exploratory analysis 109
5.3 Nonparametric methods for analysing two or more samples of unimodal data 113
5.3.1 Introduction 113
5.3.2 Test for a common median direction of two or more distributions 114
5.3.3 Estimation of the common median direction of two or more distributions 114

5.3.4 Test for a common mean direction of two or more distributions 115
5.3.5 Estimation of the common mean direction of two or more distributions 118
5.3.6 Test whether two or more distributions are identical 122
5.4 Analysis of two or more samples from von Mises distributions 123
5.4.1 Introduction 123
5.4.2 Test for a common mean direction of two or more von Mises distributions 124
5.4.3 Estimation of the common mean direction of two or more von Mises distributions 130
5.4.4 Test for equality of concentration parameters of two or more von Mises distributions 131
5.4.5 Estimation of the common concentration parameter of two or more von Mises distributions 133
5.5 Analysis of data from more complicated experimental designs 133

6 Correlation and regression 135
6.1 Introduction 135
6.2 Linear–circular association and circular–linear association 139
6.2.1 Introduction 139
6.2.2 Linear–circular association: C-association 140
6.2.3 Linear–circular association: C-linear association 145
6.3 Circular–circular association 145
6.3.1 Introduction 145
6.3.2 Circular–circular association: T-monotone association 146
6.3.3 Circular–circular association: T-linear association 151
6.3.4 A general test for circular–circular association 153
6.4 Regression models for a circular response variable 155
6.4.1 Introduction 155
6.4.2 Circular regression for the mean direction 157
6.4.3 Circular regression for the concentration parameter 163
6.4.4 Circular regression with a mixed model 166
6.4.5 Circular regression with a circular covariate 168

7 Analysis of data with temporal or spatial structure 169
7.1 Introduction 169
7.2 Analysis of temporal data 172
7.2.1 Introduction 172
7.2.2 Exploratory analysis 173
7.2.3 Detecting changes of direction and serial dependence 176

7.2.4 Fitting autoregressive models to time series 184
7.3 Spatial analysis 189

8 Some modern statistical techniques for testing and estimation 199
8.1 Introduction 199
8.2 Bootstrap methods for confidence intervals and hypothesis tests: general description 200
8.3 Bootstrap methods for circular data: confidence regions for the mean direction 205
8.3.1 Introduction 205
8.3.2 Methods for a single sample 205
8.3.3 Handling very small samples 207
8.3.4 Methods for combining two or more samples 209
8.3.5 Computing algorithms 210
8.4 Bootstrap methods for circular data: hypothesis tests for mean directions 211
8.4.1 Introduction 211
8.4.2 Methods for a single sample 211
8.4.3 Handling very small samples 212
8.4.4 Methods for comparing two or more samples 213
8.5 Randomisation, or permutation, tests 214

Appendix A Tables 219
A.1 Percentiles of the Normal N(0,1) distribution 219
A.2 Percentiles of the χ^2_ν-distribution 221
A.3 Values of $y = A_1^{-1}(x)$ for $0 \le x \le 1$ 224
A.4 Values of $x = A_1(y)$ for $y \ge 0$ 225
A.5 Selected percentiles for the statistic V 225
A.6 Selected confidence intervals for the median direction 226
A.7 Critical values for the Wilcoxon signed-rank statistic 227
A.8 Critical values for testing goodness of fit of a von Mises distribution 230
A.9 Critical values for the discordancy test for a von Mises sample 231
A.10 Critical values for the angular–linear rank correlation statistic U_n 231
A.11 Assessment of significance of the angular–linear rank correlation coefficients $\hat{\lambda}_n$ and $\hat{\lambda}_{n,M}$ 232
A.12 Critical values for the angular–angular rank correlation coefficient $\hat{\Delta}_n$ 234
A.13 Critical values for the angular–angular rank correlation coefficient $\hat{\Pi}_n$ 236

Appendix B Data sets 239
B.1 Arrival times at an intensive care unit 239
B.2 Long-axis orientations of feldspar laths 240
B.3 Movements of turtles 241
B.4 Directional preferences of starhead topminnows 241
B.5 Long-axis orientations of feldspar laths 242
B.6 Cross-bed azimuths of palaeocurrents 242
B.7 Movements of ants 243
B.8 Orientations of pebbles 243
B.9 Dance directions of bees 244
B.10 Directions of desert ants 244
B.11 Movements of sea stars 245
B.12 Vanishing directions of homing pigeons 245
B.13 Orientations of termite mounds 246
B.14 Seasonal wind directions 249
B.15 Groove and tool marks, and flute marks 250
B.16 Cross-bed measurements from Himalayan molasse 250
B.17 Orientations of rock cores 251
B.18 Wind direction and ozone concentration 251
B.19 Nest orientations and creek directions 252
B.20 Movements of blue periwinkles 252
B.21 Pairs of wind directions 253
B.22 Face-cleat in a coal seam 254
B.23 Wind directions 254
B.24 Time series of flare azimuths 255
