1	Introduction to Radiowaves	1
1.1	Introduction	1
1.2	Radio Services	2
1.3	International Codes and Standards.....	3
1.3.1	Objectives	3
1.3.2	Class of Codes and Standards	3
1.3.3	Radio Regulations.....	4
1.3.4	ITU-R Recommendations	5
1.4	Basic Terms and Definitions	5
1.5	Classification of Radio Systems	6
1.5.1	Classification Based on Frequency Bands	6
1.5.2	Classification Based on Service Types	6
1.6	Radio Frequency Bands	7
1.6.1	Role of Frequency in Radiocommunications	7
1.6.2	Classification of Frequency Bands	7
1.7	Application of Frequency Bands	8
1.7.1	ELF, ULF, and VLF Bands	9
1.7.2	LF Band (30–300 kHz)	9
1.7.3	MF Band (300–3000 kHz)	9
1.7.4	HF Band (3–30 MHz)	10
1.7.5	VHF Band (30–300 MHz)	10
1.7.6	UHF Band (300–3000 MHz)	10
1.7.7	SHF Band (3–30 GHz)	10
1.7.8	EHF Band (30–300 GHz)	11
1.7.9	Micrometric and Nanometric Bands	11
1.8	Frequency Allocation.....	11
1.8.1	Introduction	11
1.8.2	Frequency Registration	12
1.8.3	ITU Regions for Frequency Allocation	12
1.8.4	Frequency Assignment	13

1.9	Atmosphere Layers	14
1.9.1	Troposphere Layer	15
1.9.2	Stratosphere Layer	16
1.9.3	Ionosphere Layer	16
1.9.4	Magnetosphere Layer	17
1.10	Designation of Emissions	18
1.11	Summary	19
1.12	Exercises	19
2	Basic Principles in Radiowave Propagation	23
2.1	Introduction	23
2.2	Transmission Media	24
2.2.1	Media Characteristics	24
2.2.2	Radiowave Velocity	25
2.2.3	Depth of Radiowave Penetration	26
2.3	Electromagnetic Waves	28
2.3.1	Maxwell Equations	28
2.3.2	Electromagnetic Wave Spectrum	29
2.4	Wave Equations and Spectrum	29
2.4.1	Plane Waves	29
2.4.2	Radiowave Spectrum	30
2.5	Media Effects on Radiowaves	31
2.6	Propagation Parameters	31
2.7	Radiowave Polarization	32
2.7.1	Definition of Polarization	32
2.8	Main Types of Radiowave Polarization	32
2.8.1	Basic Polarized Radiowaves	33
2.9	Radio Links	36
2.10	Free-Space Loss	37
2.10.1	Power Flux Density	37
2.10.2	Free-Space Loss	38
2.10.3	ITU-R Formulas	40
2.11	Equivalent Radiated Power	43
2.11.1	Antenna Gain	43
2.11.2	ERP and EIRP	44
2.11.3	Electric Field Intensity	44
2.12	Transmission Loss	46
2.12.1	Loss Terms in Radio Links	46
2.12.2	Basic Transmission Loss	46
2.12.3	System and Total Losses	48
2.13	Radio Ray Path and K-Factor	49
2.13.1	Curvature of Ray Path	49
2.13.2	K-Factor	51
2.14	Summary	52
2.15	Exercises	53

3	Radiowave Propagation in Troposphere	57
3.1	Introduction	57
3.2	Earth Atmosphere	58
3.2.1	Major Parameters	58
3.2.2	Lower Part of Troposphere	59
3.2.3	Standard Earth Atmosphere	59
3.2.4	Non-standard Atmospheric Parameters	61
3.3	Radiowave Refraction	62
3.3.1	Refractive Index of Air	63
3.3.2	Wave Path and Effective Earth Radius	64
3.4	K-Factor	64
3.4.1	Definition	64
3.4.2	Variation Range of K-Factor	65
3.4.3	The Earth Bulge	66
3.4.4	Radio Horizon	68
3.4.5	Atmospheric Duct	70
3.5	Radiowave Attenuation in Troposphere	78
3.5.1	Introduction	78
3.5.2	Rain Attenuation	78
3.5.3	Cloud and Fog Attenuation	82
3.5.4	Hail and Snow Attenuation	84
3.5.5	Aerosols	86
3.6	Radiowave Reflection	87
3.6.1	Reflection Equations	87
3.6.2	Multipath Reception	91
3.6.3	Coverage Diagram and Height Gain Curve	93
3.6.4	Fresnel Zones	96
3.6.5	Fresnel Radius Calculation	97
3.7	Radiowave Diffraction	100
3.7.1	Introduction	100
3.7.2	Diffraction Parameter	101
3.7.3	Field in Diffraction Region	102
3.7.4	Field in Interference Region	103
3.7.5	Field in the Midpath Region	105
3.8	Attenuation of Obstacles	108
3.8.1	Obstruction Loss in Diffraction Condition	108
3.8.2	Obstructed Radio Path	111
3.9	Forest and Vegetation Area	112
3.9.1	Overall Views	112
3.9.2	VHF/UHF Frequency Bands	114
3.9.3	SHF/EHF Frequency Bands	116
3.10	Summary	120
3.11	Exercises	121

4 Radiowave Propagation in Ionosphere	127
4.1 Introduction	127
4.2 Ionization in Ionosphere Layer	127
4.2.1 Ionization and Plasma State	127
4.2.2 Ionosphere Layer Classification	129
4.2.3 Ionospheric Phenomena	129
4.3 Ionospheric Communications in MF/HF Frequency Band	131
4.3.1 Radiowave Propagation in Ionosphere	131
4.3.2 Applications	132
4.3.3 Vertical Propagation in Ionosphere	133
4.3.4 Inclined Propagation of Ionospheric Waves	135
4.3.5 Optimum Usage Frequency	136
4.3.6 Long-Distance Communications	138
4.3.7 Effects of D Sub-layer and Day/Night Frequencies	140
4.3.8 Time Delay of Different Transmission Modes	140
4.3.9 Solar Effects	143
4.3.10 Geomagnetic Field Effect	144
4.4 Ionosphere Effects on Satellite Communications	145
4.4.1 Main Effects	145
4.4.2 Ionosphere Ionization	146
4.4.3 Faraday Rotation	147
4.4.4 Group Delay	148
4.4.5 Dispersion	148
4.4.6 Scintillation	150
4.4.7 Frequency Dependence of Ionospheric Effects	152
4.5 Ionosphere Reference Characteristics	153
4.5.1 Introduction	153
4.5.2 Mapping Functions	154
4.5.3 Prediction of f_0F2 and $M(3000)F2$	156
4.5.4 Prediction of f_0E	157
4.5.5 Prediction of f_0F1	159
4.5.6 Software Programs	161
4.6 Ionosphere Main Parameters	162
4.6.1 Main Indices	162
4.6.2 Sunspot Numbers	163
4.6.3 Index Φ	164
4.7 Summary	165
4.8 Exercises	166
5 Propagation in 3 kHz to 30 MHz Band	171
5.1 Introduction	171
5.1.1 Applications	171
5.1.2 Evolution Trend	172
5.1.3 Main Considerations	172

5.2 Propagation in VLF/LF Frequency Band	173
5.2.1 Introduction	173
5.2.2 Radiowave Propagation in Seawater	173
5.2.3 Design Considerations	175
5.2.4 Submarine Vessel Radiocommunications	176
5.2.5 Propagation in the Earth Atmosphere	180
5.3 Surface Wave Propagation	181
5.3.1 Introduction	181
5.3.2 Electric Characteristics	181
5.3.3 Electric Characteristic Variation	181
5.3.4 Wave Penetration	183
5.3.5 Effective Factors in Electric Characteristics	184
5.3.6 Received Power	185
5.3.7 Vertically Polarized Waves	185
5.3.8 Horizontally Polarized Waves	187
5.3.9 ITU-R Diagrams	188
5.3.10 Mixed Paths	194
5.4 Wave Propagation in MF/HF Band	196
5.4.1 Location of the Control Points	196
5.4.2 Screening Frequency for E and F2 Layers	197
5.4.3 Propagation Modes	198
5.4.4 Wave Elevation Angle	199
5.4.5 Field Intensity of Waves	199
5.4.6 Received Power	203
5.4.7 Signal-to-Noise Ratio	204
5.4.8 Lowest Usable Frequency	205
5.4.9 Design Considerations	205
5.4.10 Wave Propagation in MF Band	209
5.5 Summary	211
5.6 Exercises	212
6 Terrestrial Mobile Radio Propagation	217
6.1 Introduction	217
6.2 Diffraction Loss	219
6.2.1 Fresnel Zones	219
6.2.2 Basic Concepts	220
6.2.3 Diffraction of Spherical Earth	222
6.2.4 Obstacle Diffraction	226
6.2.5 Single Knife-Edge Obstacles	226
6.2.6 Single Rounded Obstacles	227
6.2.7 Double Isolated Obstacles	230
6.2.8 Multiple Isolated Obstacles	234
6.3 Propagation Environment in Mobile Radio Communications	235
6.4 Signal Level Variability	236
6.4.1 Introduction	236

6.4.2	Shadow	237
6.4.3	Location Variability	237
6.4.4	Time Variability	241
6.4.5	Location and Time Variability	241
6.4.6	Fade Margin	242
6.5	Polarization	243
6.5.1	Depolarization Effects	243
6.5.2	Polarization Diversity	244
6.6	Antenna Height	244
6.6.1	Outlines	244
6.6.2	Antenna Height Gain	245
6.6.3	Fixed Antenna Height Gain	247
6.6.4	Mobile Antenna Gain	248
6.7	Reflection and Multipath	249
6.7.1	Local Reflections	249
6.7.2	Correlation Between Main and Unwanted Signals	250
6.7.3	Multipath Fading	251
6.8	Time Delay Spread	251
6.8.1	Received Signal Time Delay	251
6.8.2	System Performance	253
6.9	Climate Effects	254
6.9.1	Index of Refraction	254
6.9.2	Climate Factors	254
6.10	Earth Effects	255
6.10.1	Seawater	256
6.10.2	Fields and Hills	256
6.11	Guided Radiowave Propagation	257
6.11.1	Radiowave Propagation in Tunnels	258
6.11.2	Leaky Feeders	259
6.11.3	Air Duct	259
6.12	Mobility Effects	260
6.12.1	Surrounded Areas	260
6.12.2	Body Loss	260
6.13	Media Conditions	260
6.13.1	Introduction	260
6.13.2	Main Factors	261
6.13.3	Received Power Equation	262
6.14	Received Signal Level	265
6.14.1	Introduction	265
6.14.2	Link Power Budget Equation	265
6.15	Area Coverage Prediction Models	268
6.15.1	Introduction	268
6.15.2	Classification of Models	268
6.15.3	Model Limitations	269

6.16	Basic Models	269
6.16.1	Theoretical Model	269
6.16.2	Simple Empirical Model	270
6.17	Applied Models	272
6.17.1	Bullington Model	272
6.17.2	Hata Model	274
6.17.3	COST 231-Hata Model	276
6.17.4	Lee Model	277
6.18	Summary	280
6.19	Exercises	281
7	Line-of-Sight Propagation	291
7.1	Introduction	291
7.1.1	Propagation Environment	291
7.1.2	Main Factors	292
7.1.3	Frequency Bands	292
7.2	Ray Trajectory	293
7.2.1	Radius of Radio Path Curvature	293
7.2.2	K-Factor	295
7.2.3	Earth Atmosphere	297
7.2.4	Typical Values of K-Factor	298
7.2.5	Radio Path Profiles	299
7.3	Terrestrial Obstacles	302
7.3.1	Obstacle Types	302
7.3.2	Fresnel Radius	303
7.3.3	Diffraction Loss	303
7.4	Radio Path Clearance	305
7.4.1	Single-Antenna Criterion	305
7.4.2	Two-Antenna Space Diversity Criterion	306
7.4.3	Three-Antenna Space Diversity Configuration	306
7.4.4	Minimum Antenna Height	307
7.4.5	Single-Antenna Height	307
7.4.6	Antenna Space Diversity	307
7.4.7	Optimum Antenna Height	308
7.4.8	Antenna Around Clearance	309
7.5	Propagation Loss in LOS Radio Links	311
7.5.1	Communication Equation	311
7.5.2	Propagation Loss	313
7.5.3	Precipitation Loss	314
7.5.4	Cross-Polarization Discrimination, XPD	319
7.5.5	Antenna to Air Coupling Loss	322
7.6	Design Criteria	322
7.6.1	Hypothetical Reference Circuit	323
7.6.2	Grade of the System	323
7.6.3	Availability and Unavailability Criteria	324

7.6.4	Quality Criterion	326
7.6.5	Performance Criterion	326
7.7	Fading of the Received Signal	327
7.7.1	Permanent Attenuations	327
7.7.2	Occasional Attenuations	328
7.7.3	Fading	328
7.7.4	Multipath	329
7.7.5	Overreach Reception	332
7.7.6	Fading Occurrence Probability	334
7.7.7	New ITU-R Method	337
7.8	Outage Time	344
7.8.1	Introduction	344
7.8.2	Fade Margin	344
7.8.3	Link Outage Time	345
7.8.4	Fade Margin Calculation	347
7.9	Design Considerations	348
7.9.1	Design Criteria	348
7.9.2	Radio Site Selection	349
7.9.3	Foundations and Earthling Network	349
7.9.4	Climate	350
7.9.5	Radio Path Inclination	350
7.9.6	Zigzag Path	350
7.9.7	Path Length	351
7.9.8	Antenna Around Clearance	351
7.9.9	Radio Sources	351
7.9.10	Precipitation	352
7.9.11	Improvement Techniques	352
7.9.12	Technical Calculations	352
7.10	Summary	353
7.11	Exercises	354
8	Propagation in Guided Media	361
8.1	Introduction	361
8.2	RF Leaky Cable	361
8.3	Waveguides	363
8.3.1	TE Modes	364
8.3.2	TM Modes	367
8.4	Fiber Optic Cable	369
8.4.1	Introduction	369
8.4.2	FOC Band and Windows	370
8.4.3	Applications in Telecommunications	372
8.4.4	Propagation Principles in FOC	376
8.4.5	Main Parameters	379
8.4.6	Limiting Factors in FOC Networks	381
8.4.7	FOC Standards	385
8.4.8	FOC Telecom Networks	385

8.4.9	FOC Link Calculations	388
8.4.10	Mechanical and Civil Considerations	397
8.5	Summary	398
8.6	Exercises	398
9	Selected Topics in Radiowave Propagation	403
9.1	Scope	403
9.2	Optical Radio Links	404
9.2.1	Introduction	404
9.2.2	Main Atmospheric Effects	405
9.2.3	Atmospheric Absorption	405
9.2.4	Atmospheric Scattering	406
9.2.5	Scintillation	408
9.2.6	Atmospheric Precipitation	409
9.2.7	Aerosol Absorption	412
9.2.8	Ambient Sunlight Effect	413
9.2.9	Visibility	414
9.3	Optical Radio Link Design	415
9.3.1	Design Calculations	415
9.3.2	FSO Link Design	421
9.4	Radiowave Propagation in 20–375 THz	424
9.4.1	Main Effects of Atmosphere	424
9.4.2	Absorption	425
9.4.3	Scattering	425
9.4.4	Turbulence	427
APPENDIX	429	
A	Logarithmic System of Units	429
A.1	Introduction	429
A.2	Definition	429
A.3	Basic Formulas	430
A.4	Common Logarithmic Quantities	430
A.5	Principles of Logarithmic System of Units	431
A.6	Advantages of Logarithmic System of Units	432
B	ITU-R Recommendations P-Series	435
C	ITU-R-Based Terms and Definitions Related to Propagation in Non-ionized Media (P-310)	441
C.1	Vocabulary of Terms Used in Radio Propagation in Non-ionized Media	441
Bibliography	447
