Preface.....	xxi
Authors.....	xxiii

PART I Ceramics as Engineering Materials

Chapter 1 What Is a Ceramic?	3
1.1 Definitions of Ceramics.....	3
1.2 Material Types Generally Considered in the Ceramics Family	3
1.2.1 Polycrystalline Ceramics Fabricated by Sintering	3
1.2.2 Glass	4
1.2.3 Glass Ceramics.....	4
1.2.4 Single Crystals of Ceramic Compositions	4
1.2.5 Chemical Synthesis or Bonding.....	5
1.2.6 Natural Ceramics	5
1.3 So What Is a Ceramic?	5
Special Optional Assignment	6
References	7
Study Guide.....	7
Chapter 2 History of Ceramics	9
2.1 Ceramics in the Stone Age	9
2.1.1 Use of Natural Ceramics	9
2.1.2 Synthetic Stone: Clay Transformed by Fire	11
2.1.3 First Practical Use of Earthenware	11
2.1.4 Other Neolithic Ceramic Innovations	12
2.2 Rise of Traditional Ceramic Industries	13
2.2.1 Ceramic Innovations during the Chalcolithic Period.....	13
2.2.2 Ceramics and the Metal Ages	15
2.2.3 Emergence of Glass.....	15
2.2.4 Ceramics in Building	16
2.2.5 Ceramic Whitewares	20
2.3 From Traditional to Modern Ceramics.....	21
2.4 Summary	23
References	23
Additional Recommended Reading on Technical Aspects of Traditional Ceramics	23
Study Guide.....	23
Chapter 3 Applications: Engineering with Ceramics	25
3.1 High-Temperature Applications	25
3.1.1 Ceramics in Metal Processing.....	25
3.1.2 Glass Production	29
3.1.3 Industrial Processes.....	29
3.1.3.1 Furnace and Reaction Vessel Linings.....	29

3.1.3.2	Heat Sources	30
3.1.3.3	Heat Exchangers	30
3.1.3.4	Heat Exchange for Chemical Processing	33
3.1.4	Heat Engines	34
3.1.4.1	Gas Turbine Engines	34
3.1.4.2	Internal Combustion Engines	37
3.1.4.3	Aerospace	38
3.2	Wear and Corrosion Resistance Applications	39
3.2.1	Seals	39
3.2.2	Valves	43
3.2.3	Pumps	46
3.2.4	Bearings	46
3.2.5	Thread Guides	48
3.2.6	Ceramics in Papermaking	49
3.3	Cutting and Grinding	49
3.3.1	Ceramic Cutting Tool Inserts	50
3.3.2	Superhard Abrasives	53
3.3.3	Waterjet Cutting	53
3.4	Electrical Applications of Ceramics	54
3.4.1	Ceramic Electrical Insulators	54
3.4.2	Dielectric Ceramics	57
3.4.3	Semiconductors	58
3.4.4	Electrical Conductors	60
3.4.5	Ceramic Superconductors	63
3.5	Magnetic Ceramics	64
3.6	Optical Applications of Ceramics	65
3.6.1	Applications Based on Transparency	66
3.6.1.1	Window Glass	66
3.6.1.2	Container Glass	68
3.6.1.3	Optical Glass Fibers	68
3.6.1.4	Lenses	68
3.6.2	Applications Based on Phosphorescence and Fluorescence	69
3.6.2.1	Fluorescent Light	69
3.6.2.2	Television and Oscilloscopes	69
3.6.2.3	Electroluminescent Lamps	70
3.6.2.4	Lasers	70
3.7	Composites	71
3.8	Medical Applications of Ceramics	72
3.8.1	Replacement and Repair	72
3.8.1.1	Dental Ceramics	72
3.8.1.2	Hip Implants	74
3.8.1.3	Spine Repair	75
3.8.1.4	Middle-Ear Implants	75
3.8.1.5	Eye Repairs	75
3.8.1.6	Heart Valve Implants	76
3.8.1.7	Prosthetic Devices	76
3.8.2	Ceramics for Medical Diagnosis	76
3.8.2.1	CT Scanner	76
3.8.2.2	Endoscopy	77
3.8.2.3	Ultrasound Imaging	78
3.8.3	Ceramics in Medical Treatment and Therapy	79

3.9	Energy Efficiency and Pollution Control	81
3.9.1	Energy Savings in the Home	81
3.9.1.1	Fiberglass Insulation	81
3.9.1.2	Efficient Light Sources	82
3.9.1.3	Gas Appliances	84
3.9.2	Ceramics for Power Generation	84
3.9.3	Ceramics in the Transportation Sector	85
3.9.4	Other Uses of Ceramics for Energy Efficiency and Pollution Control	87
3.10	Military	87
3.11	Recreation	88
3.12	Ceramics Modeling and Simulation	89
3.13	Summary	92
	References	92
	Study Guide	93

PART II Structures and Properties

Chapter 4	Atomic Bonding and Crystal Structure	97
4.1	Electronic Configuration of Atoms	97
4.2	Bonding	100
4.2.1	Metallic Bonding	102
4.2.2	Ionic Bonding	102
4.2.3	Covalent Bonding	107
4.2.4	Ionic and Covalent Bond Combinations	109
4.2.5	van der Waals Bonds	109
4.3	Polymorphic Forms and Transformations	111
4.4	Noncrystalline Structures	113
4.4.1	Glasses	113
4.4.2	Gels	115
4.4.3	Vapor Deposition	115
4.5	Molecular Structures	115
4.5.1	Hydrocarbons	115
4.5.2	Addition Polymerization	116
4.5.3	Condensation Polymerization	117
4.5.4	Polymer Crystallization	118
4.5.5	Cross-Linking and Branching	118
	References	120
	Problems	120
	Study Guide	120
Chapter 5	Crystal Chemistry and Specific Crystal Structures	123
5.1	Crystal Structure Notations	123
5.1.1	Crystal Systems and Bravais Lattices	123
5.1.2	Crystal Directions and Planes	123
5.1.3	Structure, Composition, and Coordination Notations	127
5.2	Crystal Chemistry of Ceramics	127
5.2.1	Crystal Chemistry Concepts	128
5.2.1.1	Ionic Radius	128

5.2.1.2	Ionic Packing	128
5.2.1.3	Effect of Charge.....	130
5.2.2	Crystal Chemical Substitutions	131
5.2.3	Derivative Structures.....	132
5.2.3.1	Ordering.....	132
5.2.3.2	Nonstoichiometry	132
5.2.3.3	Stuffing	132
5.2.3.4	Distortion	133
5.3	Metallic and Ceramic Crystal Structures.....	133
5.3.1	Metallic Crystal Structures	133
5.3.2	Ceramic Structures with a Single Element	134
5.3.3	Binary Ceramic Structures.....	138
5.3.3.1	[Rock Salt] Structure $A^{[6]}X^{[6]}$	139
5.3.3.2	[Nickel Arsenide] Structure $A^{[6]}X^{[6]}$	139
5.3.3.3	[Cesium Chloride] Structure $A^{[8]}X^{[8]}$	139
5.3.3.4	[Zinc Blende] and [Wurtzite] Structures $A^{[4]}X^{[4]}$	139
5.3.3.5	[Fluorite] Structure $A^{[8]}X_2^{[4]}$	140
5.3.3.6	[Antifluorite] Structure $A^{[4]}X^{[8]}$	141
5.3.3.7	[Rutile] Structure $A^{[6]}X^{[3]}$	141
5.3.3.8	Silica Structures $A^{[4]}X_2^{[2]}$	142
5.3.3.9	[Corundum] Structure $A_2^{[6]}X_3^{[4]}$	144
5.3.4	Ternary Ceramic Structures	144
5.3.4.1	A_2BX_4 Structures	145
5.3.4.2	ABX_4 Structures	148
5.3.4.3	ABX_3 Structures	148
5.3.4.4	Other Structures.....	150
5.3.4.5	Carbide and Nitride Structures.....	151
5.3.5	Crystal Defects and Stoichiometry.....	152
5.3.5.1	Zero-Dimensional (Point) Defects.....	152
5.3.5.2	One-Dimensional (Line) Defects.....	154
5.3.5.3	Two-Dimensional (Planar) Defects	154
5.3.5.4	Three-Dimensional (Volume) Defects.....	159
5.3.5.5	Accommodating Nonstoichiometry in Crystals	160
References	160
Additional Recommended Reading	161
Problems	161
Study Guide	162
Chapter 6	Phase Equilibria and Phase Equilibrium Diagrams.....	163
6.1	Phase Equilibrium Diagrams	163
6.1.1	Concept of Phase Equilibria.....	164
6.1.2	Phase Rule	164
6.1.3	One-Component Phase Diagrams.....	165
6.1.4	Two-Component Systems.....	166
6.1.4.1	Binary Eutectic Systems.....	168
6.1.5	Intermediate Compounds.....	169
6.1.5.1	Solid Solution.....	174
6.1.5.2	Liquid Immiscibility.....	174

6.1.5.3	Exsolution	176
6.1.5.4	Polymorphism.....	176
6.1.6	Three-Component Systems	177
6.1.6.1	Simple Eutectic Ternary Diagram	177
6.1.6.2	Ternary System with Congruently Melting Binary Compound AB.....	181
6.1.6.3	Ternary System with Incongruently Melting Binary Compound AB.....	182
6.1.6.4	Ternary Compounds	183
6.1.6.5	Polymorphic Transformations	183
6.1.6.6	Immiscible Liquids in Ternary Systems.....	183
6.1.6.7	Solid Solution in Ternary Systems.....	185
6.1.6.8	Real Ternary Systems	187
6.2	Phase Equilibrium Diagram Composition Calculations	188
6.2.1	Composition Conversions.....	188
6.2.2	Binary Composition Calculations	191
6.2.3	Ternary Composition Calculations.....	192
6.3	Isoplethal Crystallization Paths.....	193
6.3.1	Binary Isoplethal Analysis	193
6.3.2	Ternary System Isoplethal Analysis.....	194
6.4	Nonequilibrium Behavior	196
6.4.1	Sluggish Kinetics.....	197
6.4.2	Rapid Heating or Cooling	197
6.4.3	Nucleation Difficulty	198
6.4.4	Elastic Constraint of a Polymorphic Transformation.....	198
6.4.5	Additional Information on Nonequilibrium.....	198
References	199
Problems	199
Study Guide	200
Chapter 7	Physical and Thermal Behavior	203
7.1	Physical Properties	203
7.1.1	Density.....	203
7.1.1.1	Crystallographic Density	203
7.1.1.2	Bulk Density	205
7.1.1.3	Theoretical Density	206
7.1.1.4	Specific Gravity	207
7.1.1.5	Open Porosity	207
7.1.1.6	Density Comparisons.....	209
7.1.2	Melting Behavior.....	209
7.2	Thermal Properties.....	212
7.2.1	Heat Capacity	212
7.2.2	Thermal Conductivity	213
7.3	Thermal Expansion	221
7.3.1	Factors Influencing Thermal Expansion	222
7.3.1.1	Thermal Expansion of Metals	222
7.3.1.2	Thermal Expansion of Ceramics	223
7.3.1.3	Thermal Expansion of Noncrystalline Solids.....	228
7.3.1.4	Thermal Expansion of Organic Solids	228

7.3.1.5	Importance of Thermal Expansion	228
7.3.1.6	Simulating Thermal Properties	229
7.3.1.7	Thermal Properties in the Future	230
	References	230
	Problems	231
	Study Guide	232
Chapter 8	Mechanical Behavior and Measurement	235
8.1	Elasticity	235
8.1.1	Modulus of Elasticity	236
8.1.2	Elastic Modulus Measurement	240
8.1.3	Poisson's Ratio	240
8.2	Strength	240
8.2.1	Theoretical Strength	241
8.2.2	Effects of Flaw Size	242
8.2.2.1	Pore Shape	244
8.2.2.2	Pore-Crack Combinations	244
8.2.2.3	Internal Pores	244
8.2.2.4	Pore Clusters	246
8.2.2.5	Inclusions	246
8.2.3	Strength Measurement	246
8.2.3.1	Tensile Strength	246
8.2.3.2	Compressive Strength	248
8.2.3.3	Bend Strength	249
8.2.3.4	Biaxial Strength	251
8.2.4	Strength Data for Ceramic Materials	252
8.3	Fracture Toughness	254
8.4	Ductile versus Brittle Behavior	257
8.4.1	Mechanism of Plastic Deformation	257
8.4.2	Deformation Behavior of Metals	258
8.4.3	Deformation Behavior in Ceramics	260
8.4.3.1	Single Crystals	260
8.4.3.2	Polycrystalline Ceramics	264
8.4.4	Ceramics Deformation Summary	264
8.5	Advanced Mechanical Testing Techniques and Modeling	264
	References	265
	Additional Recommended Reading	266
	Problems	267
	Study Guide	268
Chapter 9	Time, Temperature, and Environmental Effects on Properties	269
9.1	Creep	269
9.1.1	Effects of Temperature and Stress on Creep	270
9.1.2	Effects of Single-Crystal Structure on Creep	271
9.1.3	Effects of Microstructure of Polycrystalline Ceramics on Creep	272
9.1.4	Creep in Noncrystalline Ceramics	273
9.1.5	Effects of Composition, Stoichiometry, and Environment	274
9.1.6	Measurement of Creep	274
9.1.7	Creep Consideration for Component Design	277

9.2	Static Fatigue	278
9.3	Chemical Effects	281
9.3.1	Gas-Solid Reactions	282
9.3.1.1	Oxidation	282
9.3.1.2	Reduction and Other Reactions	286
9.3.1.3	Thermodynamics	287
9.3.1.4	Interactions with Water Vapor	288
9.3.1.5	Vaporization and Dissociation	289
9.3.2	Liquid-Solid Reactions	289
9.3.2.1	Ambient Temperature Corrosion	290
9.3.2.2	High-Temperature Corrosion of Oxides	290
9.3.2.3	Condensed-Phase Corrosion	292
9.3.2.4	Corrosion in Coal Combustion Environments	295
9.3.3	Solid-Solid Reactions	297
9.4	Mechanically Induced Effects	297
9.4.1	Surface Flaw Formation	297
9.4.2	Removal of Surface Material	301
9.5	Thermal Shock	303
	References	310
	Problems	312
	Study Guide	313
Chapter 10	Electrical Behavior	315
10.1	Fundamentals and Definitions	315
10.2	Electronic Conductivity	316
10.3	Ionic Conductivity	320
10.3.1	Mechanisms of Ionic Conductivity	320
10.3.2	Ceramic Materials Exhibiting Ionic Conductivity	321
10.3.3	Applications of Zirconia Oxygen Ion Conductive Ceramics	323
10.3.3.1	Oxygen Sensors	323
10.3.3.2	Oxygen Pumps	325
10.3.3.3	Electrolysis and Thermolysis	326
10.3.3.4	SO _x -NO _x Decomposition	326
10.3.3.5	Solid Oxide Fuel Cells	326
10.3.3.6	Resistance Heating Elements	328
10.3.3.7	Galvanic Cells for Thermodynamic and Kinetic Measurements	329
10.3.4	Alternative Oxygen Ion Conductors	329
10.3.5	Sodium Ion Conductors and Applications	329
10.3.6	Lithium Ion Conduction and Applications	332
10.4	Conductive Polymers	333
10.5	Electrical Insulators	333
10.5.1	Applications of Electrical Insulators	335
10.5.1.1	Integrated Circuit Substrates and Packages	336
10.5.1.2	Spark Plug Insulators	338
10.5.1.3	Power Line Insulators	338
10.6	Semiconductors	338
10.6.1	Mechanisms of Semiconduction	338
10.6.2	Applications of Ceramic Semiconductors	341
10.6.3	Photovoltaic Semiconductors	342

10.7 Superconductivity.....	345
10.7.1 Mechanism of Superconductivity.....	345
10.7.2 Characteristics of Superconductivity.....	347
10.7.3 Evolution of Superconductor Materials.....	348
10.7.4 Structure of High- T_c Ceramic Superconductors.....	349
10.7.5 Characteristics of the 1:2:3 Ceramic Superconductor.....	349
10.7.6 Applications of Superconductors.....	351
References.....	352
Additional Recommended Reading.....	353
Problems.....	353
Study Guide.....	354
Chapter 11 Dielectric, Magnetic, and Optical Behavior.....	355
11.1 Dielectric Properties.....	355
11.1.1 Polarization.....	355
11.1.2 Dielectric Constant.....	356
11.1.3 Dielectric Strength.....	358
11.1.4 Dielectric Loss.....	358
11.1.5 Capacitance.....	361
11.1.5.1 Functions of a Capacitor.....	364
11.1.5.2 History of Capacitors.....	364
11.1.5.3 Mechanism of High Dielectric Constant.....	364
11.1.5.4 Types of Capacitors.....	366
11.1.6 Piezoelectricity.....	367
11.1.7 Pyroelectricity.....	369
11.1.8 Ferroelectricity.....	369
11.1.8.1 Types of Ferroelectric Crystals.....	372
11.1.8.2 Polycrystalline Ferroelectrics.....	372
11.2 Magnetic Behavior.....	380
11.2.1 Source of Magnetism.....	380
11.2.2 Magnetic Terminology.....	384
11.2.3 Applications of Magnetic Ceramics.....	385
11.3 Optical Behavior.....	388
11.3.1 Absorption and Transparency.....	388
11.3.2 Color.....	390
11.3.3 Phosphorescence.....	391
11.3.4 Lasers.....	392
11.3.5 Index of Refraction.....	393
11.3.6 Electro-Optics and Integrated Optic Devices.....	397
References.....	397
Problems.....	398
Study Guide.....	399

PART III Processing of Ceramics

Chapter 12 Introduction to Ceramic Fabrication Approaches Including Powder Processing	403
12.1 General Ceramic Processing Approaches.....	403
12.1.1 Conventional Ceramic Processing by Compaction of Powders.....	403

12.1.2 Refractory Processing.....	405
12.1.3 Melting and Fusion Ceramic Processing.....	406
12.1.4 Room- or Low-Temperature Processing.....	409
12.1.5 Other Ceramic Processing Options.....	409
12.1.5.1 Coatings.....	410
12.1.5.2 Infiltration Processes.....	410
12.1.5.3 Metal-Gas Reaction.....	411
12.1.5.4 Porous Ceramics.....	412
12.1.5.5 Advanced and Emerging Processes.....	412
12.2 Powder Processing.....	413
12.2.1 Raw Materials.....	414
12.2.1.1 Traditional Ceramics.....	414
12.2.1.2 Modern Ceramics.....	414
12.2.2 Raw Material Selection Criteria.....	416
12.2.2.1 Purity.....	416
12.2.2.2 Particle Size and Reactivity.....	417
12.3 Powder Preparation and Sizing.....	418
12.3.1 Mechanical Sizing.....	418
12.3.1.1 Screening.....	418
12.3.1.2 Air Classification.....	420
12.3.1.3 Elutriation.....	421
12.3.1.4 Ball Milling.....	422
12.3.1.5 Attrition Milling.....	425
12.3.1.6 Vibratory Milling.....	426
12.3.1.7 Fluid Energy Milling.....	428
12.3.1.8 Hammer Milling.....	428
12.3.1.9 Roll Crushing.....	428
12.3.1.10 Miscellaneous Crushing.....	429
12.3.2 Chemical Sizing.....	429
12.3.2.1 Precipitation.....	429
12.3.2.2 Freeze Drying.....	429
12.3.2.3 Hot Kerosene Drying.....	430
12.3.2.4 Sol-Gel.....	431
12.3.2.5 Liquid Mix Process.....	432
12.3.2.6 Spray Roasting.....	432
12.3.2.7 Decomposition.....	433
12.3.2.8 Hydrothermal Synthesis.....	433
12.3.2.9 Plasma Techniques.....	435
12.3.2.10 Laser Techniques.....	435
12.3.3 Miscellaneous Powder Synthesis/Sizing Techniques.....	435
12.3.3.1 Calcining.....	435
12.3.3.2 Rotary Kiln.....	435
12.3.3.3 Fluidized Bed.....	436
12.3.3.4 Self-Propagating Combustion.....	436
12.3.3.5 Gas Condensation.....	436
12.4 Preconsolidation.....	436
12.4.1 Additives.....	437
12.4.2 Spray Drying.....	439
12.4.3 Granulation.....	440
12.5 Batch Determination.....	441

Study Guide.....	445
Chapter 13 Shape-Forming Processes	447
13.1 Pressing.....	447
13.1.1 Steps in Pressing.....	447
13.1.2 Selection of Additives.....	448
13.1.2.1 Binders and Plasticizers.....	448
13.1.2.2 Lubricants and Compaction Aids	453
13.1.2.3 Removal of Organic Additives	454
13.1.3 Uniaxial Pressing: Presses and Tooling	455
13.1.3.1 Dry Pressing	457
13.1.3.2 Wet Pressing	457
13.1.3.3 Uniaxial Pressing Problems.....	457
13.1.4 Isostatic Pressing.....	461
13.1.4.1 Wet-Bag Isostatic Pressing	463
13.1.4.2 Dry-Bag Isostatic Pressing	464
13.1.5 Applications of Pressing.....	465
13.2 Casting.....	466
13.2.1 Slip Casting	466
13.2.1.1 Raw Materials.....	466
13.2.1.2 Powder Processing.....	467
13.2.1.3 Slip Preparation and Rheology.....	468
13.2.1.4 Particle Size and Shape Effects	468
13.2.1.5 Particle Surface Effects	470
13.2.1.6 Slip Preparation	477
13.2.1.7 Mold Preparation	478
13.2.1.8 Casting.....	479
13.2.1.9 Casting Process Control	485
13.2.1.10 Drying.....	485
13.2.2 Tape Casting.....	486
13.2.2.1 Doctor Blade Process.....	486
13.2.2.2 Other Tape-Casting Processes.....	486
13.2.2.3 Preparation of Tape-Casting Slurries	487
13.2.2.4 Applications of Tape Casting.....	488
13.3 Plastic Forming.....	489
13.3.1 Extrusion	491
13.3.1.1 Extrusion Equipment	491
13.3.1.2 Binders and Additives for Extrusion.....	492
13.3.1.3 Extrusion Steps	495
13.3.1.4 Common Extrusion Defects.....	498
13.3.1.5 Applications of Extrusion	499
13.3.2 Injection Molding	500
13.3.2.1 Injection-Molding Parameters	500
13.3.2.2 Injection-Molding Defects.....	505
13.3.2.3 Applications of Injection Molding.....	510
13.3.2.4 Nonthermoplastic Injection Molding.....	511
13.3.3 Compression Molding	514

13.3.4 Roll Forming	514
13.3.5 Jigging	515
13.4 Green Machining.....	515

14.1 Theory of Sintering	523
14.1.1 Stages of Sintering.....	523
14.1.2 Mechanisms of Sintering.....	525
14.1.2.1 Vapor-Phase Sintering	525
14.1.2.2 Solid-State Sintering.....	527
14.1.2.3 Liquid-Phase Sintering	533
14.1.2.4 Reactive Liquid Sintering	534
14.1.3 Control of Conventional Sintering	536
14.1.3.1 Atmosphere.....	537
14.1.3.2 Time and Temperature Cycle.....	537
14.1.3.3 Design of the Furnace.....	537
14.1.4 Sintering Problems	540
14.1.4.1 Warpage	540
14.1.4.2 Overfiring	541
14.1.4.3 Burn-Off of Binders	541
14.1.4.4 Decomposition Reactions	541
14.1.4.5 Polymorphic Transformations	542
14.2 Modified Densification Processes	542
14.2.1 Modified Particulate Processes	542
14.2.1.1 Overpressure Sintering	542
14.2.2 Hot Pressing	544
14.2.2.1 Unique Hot-Pressed Properties.....	547
14.2.2.2 Hot-Pressing Limitations.....	548
14.2.3 Hot Isostatic Pressing.....	550
14.2.4 Field-Assisted Sintering Techniques	552
14.2.5 Chemical Processes.....	554
14.2.5.1 Chemical Reaction.....	554
14.2.6 Cementitious Bonding.....	559
14.2.7 Pyrolysis	560
14.2.8 Melt Processing	562
14.2.8.1 Casting, Drawing, and Blowing.....	562
14.2.8.2 Spraying.....	562
14.2.9 Crystallization	563
14.2.10 Vapor Processing.....	567
14.2.11 Infiltration.....	571
14.2.12 Metal-Gas Reaction.....	571

Problems.....	575
Study Guide.....	575

Chapter 15	Final Machining	577
15.1	Mechanisms of Material Removal	577
15.1.1	Mounted-Abrasive Machining	577
15.1.2	Free-Abrasive Machining	578
15.1.3	Impact Abrasive Machining	578
15.1.4	Chemical Machining	579
15.1.4.1	Photoetching	579
15.1.5	Electrical Discharge Machining	579
15.1.6	Laser Machining	580
15.2	Effects on Strength	581
15.2.1	Effect of Grinding Direction	582
15.2.2	Effects of Microstructure	583
15.2.3	Effects of Grinding Parameters	584
15.2.4	Optimization of Grinding	586
15.2.4.1	Lapping	588
15.2.4.2	Annealing	590
15.2.4.3	Oxidation	590
15.2.4.4	Chemical Etching	590
15.2.4.5	Surface Compression	590
15.2.4.6	Flame Polishing	591
15.3	Additional Sources of Information	592
	References	592
	Additional Recommended Reading	593
	Problems	593
	Study Guide	594
Chapter 16	Quality Assurance	595
16.1	In-Process QA	595
16.2	Specification and Certification	596
16.3	Proof Testing	598
16.4	Nondestructive Inspection	598
16.4.1	Penetrants	599
16.4.2	X-Ray Radiography	599
16.4.2.1	Conventional X-Ray Radiography	599
16.4.2.2	Microfocus X-Ray Radiography	601
16.4.2.3	Image Enhancement	601
16.4.3	Computed Tomography	603
16.4.4	Ultrasonic NDI	606
16.4.5	Other NDI Techniques	609
16.5	Quality Problem Solving and Improvement	609
16.5.1	Nature of Variation in a Fabrication Process	609
16.5.2	SPC Tools and Techniques	610
16.5.2.1	Flow Chart	610
16.5.2.2	Check Sheet	611
16.5.2.3	Pareto Chart	612
16.5.2.4	Brainstorming	612
16.5.2.5	Cause and Effect Diagram (Fishbone Diagram)	612
16.5.2.6	Five-Whys Diagram	613
16.5.2.7	Run Charts and Control Charts	613

16.5.3	Use of SPC Tools for Continuous Improvement	615
16.5.4	QA Perspective of the End User	616
16.6	Future Developments in QA	616
	References	616
	Additional Recommended Reading	618
	Problems	618
	Study Guide	618

PART IV Design with Ceramics

Chapter 17	Design Considerations	623
17.1	Requirements of the Application	623
17.2	Property Limitations	624
17.3	Fabrication Limitations	626
17.4	Cost Considerations	628
17.5	Reliability Requirements	628
17.6	Summary	629
	References	629
	Study Guide	629
Chapter 18	Design Approaches	631
18.1	Empirical Design	631
18.2	Deterministic Design	631
18.3	Probabilistic Design	634
18.3.1	Weibull Statistics	634
18.3.2	Use of the Weibull Distribution in Design	639
18.3.3	Advantages of Probabilistic Design	639
18.3.4	Limitations of Probabilistic Design	641
18.4	Linear Elastic Fracture Mechanics Approach	641
18.5	Combined Approaches	642
18.6	Computer-Assisted Design	642
	References	643
	Additional Recommended Reading	643
	Problems	644
	Study Guide	645
Chapter 19	Failure Analysis	647
19.1	Fractography	647
19.1.1	Location of the Fracture Origin	648
19.1.1.1	Fracture Mirror and Hackle	649
19.1.1.2	Wallner Lines	651
19.1.1.3	Other Features	651
19.1.2	Techniques of Fractography	653
19.1.3	Determining Failure Cause	656
19.1.3.1	Material Flaws	658
19.1.3.2	Machining Damage	659

19.1.3.3	Residual Stresses	661
19.1.3.4	Thermal Shock.....	662
19.1.3.5	Impact.....	665
19.1.3.6	Biaxial Contact.....	667
19.1.3.7	Oxidation–Corrosion.....	669
19.1.3.8	Slow Crack Growth.....	673
19.2	Summary	674
	References	674
	Additional Recommended Reading.....	676
	Study Guide.....	676
Chapter 20	Toughening of Ceramics	677
20.1	Toughening Mechanisms.....	677
20.1.1	Modulus Transfer	678
20.1.1.1	Effect of Elastic Modulus	678
20.1.1.2	Effect of Volume Fraction and Architecture	678
20.1.1.3	Effect of Fiber Length	680
20.1.1.4	Effect of Interfacial Bond.....	681
20.1.2	Prestressing	681
20.1.3	Crack Deflection or Impediment.....	682
20.1.4	Crack Bridging	684
20.1.5	Pullout	685
20.1.6	Crack Shielding	685
20.1.7	Energy Dissipation	688
20.2	Examples of Toughened Ceramics	689
20.2.1	Self-Reinforced Ceramics	689
20.2.1.1	Self-Reinforced Si ₃ N ₄	690
20.2.1.2	Self-Reinforced ZrC	690
20.2.1.3	Aluminate Platelet-Reinforced Transformation-Toughened ZrO ₂	690
20.2.1.4	La β-Alumina-Reinforced Transformation-Toughened ZrO ₂	690
20.2.2	Transformation-Toughened Ceramics	693
20.2.2.1	Transformation-Toughened ZrO ₂	693
20.2.2.2	Other Transformation-Toughened Ceramics	697
20.2.3	Particulate-Reinforced Ceramics	698
20.2.4	Whisker-Reinforced Ceramics	698
20.2.5	Al ₂ O ₃ Reinforced with SiC Whiskers	699
20.2.6	Si ₃ N ₄ Reinforced with SiC and Si ₃ N ₄ Whiskers	704
20.2.7	MoSi ₂ and MoSi ₂ –WSi ₂ Reinforced with SiC Whiskers.....	704
20.2.8	Fiber-Reinforced Ceramics	704
20.2.8.1	Glass Fibers	704
20.2.8.2	Carbon Fibers	705
20.2.8.3	Oxide Fibers.....	707
20.2.8.4	Nonoxide Fibers.....	709
20.2.9	Examples of Ceramic Matrix Composites Reinforced with Ceramic Fibers	712
20.2.9.1	Cement Matrix Composites.....	712
20.2.9.2	Glass Matrix Composites.....	712
20.2.9.3	Glass–Ceramic Matrix Composites.....	714

20.2.9.4	SiC Matrix Composites Fabricated by Chemical Vapor Infiltration	716
20.2.9.5	SiC Matrix Composites Fabricated by Si Melt Infiltration.....	719
20.2.9.6	SiC Matrix Composites Fabricated by Pre ceramic Polymer Infiltration.....	720
20.2.9.7	Oxide Matrix Composites Fabricated by Infiltration	721
20.2.9.8	Si ₃ N ₄ Matrix Composites.....	721
20.2.9.9	Other Fiber-Reinforced Ceramic Matrix Composites	724
20.2.10	Composites with Surface Compression.....	726
20.2.11	Fibrous Monolith.....	727
20.3	Summary	728
	References	729
	Problems.....	734
	Study Guide.....	734

PART V Applying Ceramics to Real-World Challenges

Chapter 21	Solving Past Challenges: Case Studies.....	739
21.1	Evolution of the Integrated Circuit.....	739
21.1.1	Silicon Crystal Growth.....	741
21.1.2	Slicing, Grinding, and Polishing	742
21.1.3	Doping to Achieve Semiconductor Behavior	742
21.1.4	Buildup of the Device Layers.....	743
21.2	Evolution of the Flash Memory and the Digital Camera	746
21.3	Challenges of the Digital Watch.....	747
21.4	Invention and Evolution of the Catalytic Converter	747
21.4.1	Ceramic Material Selection and Development.....	748
21.4.2	Design Selection and Fabrication Development.....	748
21.4.3	Improvements in Catalytic Converters.....	749
21.5	Bioglass and Bioceramics.....	750
21.6	Refractory Evolution.....	750
21.6.1	Refractories Development	750
21.6.2	<i>In Situ</i> Refractories.....	752
21.7	Ceramics in the Nuclear Industry.....	754
21.7.1	Development of Nuclear Fuel.....	755
21.7.2	Nuclear Wasteforms	760
21.8	Silicon Nitride: Seeking Uses for a New Material	763
	References	768
Chapter 22	Where Next for Ceramics? Future Trends and Challenges.....	771
22.1	Nanotechnology and Nanoprocessing.....	771
22.1.1	Review of Importance of Particle Size and Arrangement	771
22.1.2	Further Nanoscale Manipulation.....	773
22.1.2.1	Control of Chemistry for Self-Assembly and Engineered Structures.....	773
22.1.2.2	Quantum Dots.....	775
