Preface	v
Introduction	xiii
References	xiv
1 Capillarity: Deformable Interfaces	1
1.1 Surface Tension	1
1.1.1 Physical Origin	2
1.1.2 Mechanical Definition: Surface Energy and Capillary Force	3
1.1.3 Measurements of Surface (or Interfacial) Tensions	6
1.1.4 Laplace Pressure	6
1.1.5 Minimal Surfaces	9
1.1.5.1 Jet	10
1.1.5.2 Drop on a Fiber	11
1.1.6 Minimal Surfaces With Zero Curvature	13
1.2 Contact Between Three Phases: Wetting	15
1.2.1 Two Types of Wetting: The Spreading Parameter S	16
1.2.2 Wetting Criteria: Zisman's Rule	18
1.2.3 Choice of Solid/Liquid Pairs	21
1.2.3.1 Ideal Liquids	21
1.2.3.2 Solid Substrates	23
1.2.4 Liquid Substrates: Neumann's Construction	27

Appendix: Minimal Surfaces – Euler-Lagrange Equations	29	3.5.1 Hele-Shaw Cells	80
References	30	3.5.2 Puddle Edges	81
2 Capillarity and Gravity	33	3.5.3 Puddle Distortions	83
2.1 The Capillary Length κ^{-1}	33	3.6 The Role of Thermal Fluctuations	84
2.2 Drops and Puddles in the Partial Wetting Regime	35	References	84
2.2.1 The Shape of Drops	35	4 Wetting and Long-Range Forces	87
2.2.2 Droplets ($R \ll \kappa^{-1}$)	36	4.1 Energy and Properties of Films	87
2.2.3 Heavy Drops ($R \gg \kappa^{-1}$)	36	4.1.1 Transition From Macroscopic to Microscopic	87
2.2.4 Experimental Techniques for Characterizing Drops	38	4.1.2 Thickness Change and Disjoining Pressure	88
2.3 Menisci	43	4.1.3 Overall Stress in a Film	90
2.3.1 Characteristic Size	43	4.1.4 Three Types of Wetting	91
2.3.2 Shape of a Meniscus Facing a Vertical Plate	45	4.1.4.1 Stability Condition	91
2.3.3 Meniscus on a Vertical Fiber	47	4.1.4.2 Total Wetting	93
2.4 Capillary Rise in Tubes: Jurin's Law	49	4.1.4.3 Partial Wetting	93
2.4.1 Historical Background	49	4.1.4.4 Pseudo-Partial Wetting	93
2.4.2 The Law of Capillary Rise	51	4.2 The Nature of Long-Range Forces	94
2.4.3 Pressure Argument for the Capillary Rise	52	4.2.1 van der Waals Forces	94
2.5 Floating Lenses	54	4.2.2 Case of Temperature-Dependent van der Waals Forces	96
2.5.1 The Spreading Parameter	54	4.2.3 Van der Waals Interactions in Layered Solids: Surface Treatments	97
2.5.2 The Shape of Floating Lenses ($S < 0$)	54	4.2.4 Other Long-Range Forces	98
2.6 Supplement on Techniques for Measuring Surface Tensions	56	4.3 Some Manifestations of Long-Range Forces	99
2.6.1 The Shape of Drops	57	4.3.1 Films on Slightly Rough Substrates: The Healing Length	99
2.6.1.1 The Pendant Drop Method	57	4.3.2 Fine Structure of the Triple Line	101
2.6.1.2 Spinning Drops	60	4.4 Stratified Film	103
2.6.2 Pressure Measurements	61	References	104
2.6.3 Force Measurements	62		
2.6.4 Soft Solid Interfaces	63		
References	67	5 Hydrodynamics of Interfaces	107
3 Hysteresis and Elasticity of Triple Lines	69	5.1 Mechanics of Films: The Lubrication Approximation	107
3.1 Description of Phenomena	69	5.2 Dynamics of Thin Films	111
3.1.1 Advancing and Receding Angle	69	5.2.1 Thinning of a Vertical Film	111
3.1.2 Pinning of the Triple Line	71	5.2.2 Levelling of a Horizontal Film	112
3.2 Elasticity of the Triple Line	72	5.2.3 Rayleigh-Taylor Instability	115
3.2.1 The Myth of the Line Tension	72	5.2.4 Plateau-Rayleigh Instability	118
3.2.2 The Fringe Elasticity of the Line of Contact	73	5.3 Forced Wetting	122
3.3 Hysteresis Due to Strong, Sparse Defects	76	5.3.1 The Landau-Levich-Derjaguin Model (and Variant Thereof)	122
3.4 Surfaces With Dense Defects	78	5.3.2 Soapy Liquids	126
3.4.1 A Realistic Example	78	5.3.3 Other Geometries	127
3.4.2 Small, Uncorrelated Defects	79	5.4 Dynamics of Impregnation	129
3.5 Two Cases Consistent With the Elasticity of Vibrating Strings	80	5.4.1 Description of the Phenomenon	129
		5.4.2 Washburn's Law	130

5.4.3 Inertial Regime	131	8.2.2 Water/Air Interfaces	196
5.5 Waves and Ripples	133	8.2.2.1 Insoluble Monolayers	197
5.5.1 Deep Water Condition	133	8.2.2.2 Soluble Monolayers	197
5.5.2 Dispersion Relation in the Inertial Regime	134	8.2.2.3 Dynamical Surface Tensions	199
5.5.3 Attenuation	135		
References	136	8.3 Some Applications of Surfactants	200
6 Dynamics of the Triple Line	139	8.3.1 Flotation	200
6.1 Basic Experiment	139	8.3.2 Detergents	202
6.2 Relation Between Force and Velocity	141	8.3.3 Emulsification	203
6.2.1 Mechanical Model (Viscous Dissipation)	142	8.3.4 Surfactants as Wetting and Dewetting Agents	204
6.2.2 Chemical Model	144		
6.3 Oscillations Modes of a Triple Line	146	8.4 Soap Films and Bubbles	206
6.4 Dynamics of Total Wetting	148	8.4.1 Fabrication of Films	206
References	150	8.4.2 The Role of Surfactants	207
7 Dewetting	153	8.4.3 Draining Mechanisms	208
7.1 Critical Thickness for Dewetting	155	8.4.4 Aging and Death of Films	209
7.1.1 Film on a Solid Substrate	155	8.4.5 The Case of Bubbles	211
7.1.2 Film on a Liquid Substrate	158	References	212
7.1.3 Sandwiched Liquid Films	159		
7.2 Viscous Dewetting	160	9 Special Interfaces	215
7.2.1 Ideal Solid Substrates	161	9.1 Outline	215
7.2.2 Imperfect Solid Substrates	166	9.2 Wetting of Textured Surfaces	216
7.2.2.1 Surfaces With Hysteresis	166	9.2.1 Basic Model	216
7.2.2.2 "Slippery" Substrates	168	9.2.1.1 Experiment of Johnson and Dettre	216
7.2.3 Liquid Substrates	169	9.2.1.2 Wenzel's Model	217
7.2.4 Spinodal Dewetting	170	9.2.1.3 The Cassie-Baxter Model	218
7.3 Inertial Dewetting	174	9.2.2 Composite Rough Surfaces	219
7.3.1 The Reynolds Number	175	9.2.2.1 Hydrophilic Surfaces	219
7.3.2 The Froude Number (Condition for Shock Waves)	177	9.2.2.2 Hydrophobic Surfaces	221
7.3.3 Liquid/Liquid Inertial Dewetting	180	9.2.2.3 Summary	225
7.4 Visco-Elastic Dewetting	181	9.2.3 Liquid Pearls and Marbles	226
7.4.1 Rupture of Ultra-Viscous Films	182	9.2.3.1 Implementation	226
7.4.2 Life and Death of Viscous Bubbles	185	9.2.3.2 Static States	229
References	187	9.2.3.3 Dynamical States	230
8 Surfactants	191	9.3 Wetting and Porous Media	235
8.1 Frustrated Pairs	191	9.3.1 Capillary Rise in a Porous Medium	235
8.1.1 Principle	191	9.3.2 Equilibrium Angle at the Surface of a Porous Medium	237
8.1.2 The Notion of Hydrophilic/Lipophilic Balance (HLB)	192	9.3.3 Suction Experiments on Drops	238
8.2 Aggregation of Surfactants	194	9.3.4 Suction Experiments on Films	239
8.2.1 Aggregation in Volume: Micelles	194	9.4 Wetting at Soft Interfaces	240
		9.4.1 Principles of "Elastic" Wetting	241
		9.4.1.1 The Spreading Parameter S	242
		9.4.1.2 Young's Relation No Longer Holds!	242
		9.4.1.3 Penny-Shaped Trapped Drops	242
		9.4.2 Experimental Observation of Elastic Wetting	243

9.4.2.1	The Three Partners: Soft Solid, Liquid, and Elastomer	243
9.4.2.2	Observation of the Contact: Reflection Interference Contrast Microscopy	244
9.4.2.3	Drop Profile and Measurement of S	245
9.4.3	"Elastic" Dewetting of Wedged-in Films	246
9.4.3.1	Drainage	247
9.4.3.2	Controlled Dewetting: Nucleators	248
9.4.4	Wetting Transitions Under Shear: The Principle of Hydroplaning	252
9.4.5	Role of Nucleators in Forced Wetting: Cerenkov Wake	255
9.4.6	Conclusion	256
References	258
10 Transport Phenomena		261
10.1	Chemical Gradients	261
10.1.1	Experiments With Vapors	261
10.1.2	Transport Toward Wettable Regions	263
10.2	Thermal Gradients	268
10.2.1	Drops Favoring the Cold	268
10.2.2	Finger Formation	271
10.3	Reactive Wetting	275
10.3.1	Examples	275
10.3.2	Liquid Column in a Capillary	276
10.3.3	Bidrops	278
10.3.4	"Running Drops" on a Solid Planar Surface	280
10.4	Transport by Electric Field	281
10.4.1	Relevance of Microsystems	281
10.4.2	Electrocapillarity	282
10.4.3	Principle of Electro-Osmosis	283
10.4.4	Examples	283
10.4.4.1	Electrostatic Lenses	283
10.4.4.2	Transfer of Bubbles	285
10.4.4.3	Limitations	285
10.4.4.4	Comparison with Capacitive Effects	286
References	286
