Preface

ix

Part 1 Fundamentals of Fluid Mechanics

1	Fluid Properties	3
1.1	Definition of a Fluid	3
1.2	Force, Mass, Length, and Time Units	6
1.3	Viscosity	8
1.4	Continuum	12
1.5	Density, Specific Volume, Specific Weight, Specific Gravity, Pressure	13
1.6	Perfect Gas	14
1.7	Bulk Modulus of Elasticity	16
1.8	Vapor Pressure	17
1.9	Surface Tension	18
2	Fluid Statics	25
2.1	Pressure at a Point	25
2.2	Basic Equation of Fluid Statics	27
2.3	Units and Scales of Pressure Measurement	31
2.4	Manometers	34
2.5	Forces on Plane Areas	39
2.6	Force Components on Curved Surfaces	49
2.7	Buoyant Force	55
2.8	Stability of Floating and Submerged Bodies	58
2.9	Relative Equilibrium	63

3	Fluid-Flow Concepts and Basic Equations	84
3.1	Flow Characteristics; Definitions	84
3.2	The Concepts of System and Control Volume	90
3.3	Application of the Control Volume to Continuity, Energy, and Momentum	94
3.4	Continuity Equation	96
3.5	Euler's Equation of Motion along a Streamline	100
3.6	The Bernoulli Equation	106
3.7	Reversibility, Irreversibility, and Losses	107
3.8	The Steady-State Energy Equation	109
3.9	Interrelations between Euler's Equation and the Thermodynamic Relations	112
3.10	Application of the Energy Equation to Steady Fluid-Flow Situations	113
3.11	Applications of the Linear-Momentum Equation	116
3.12	The Moment-of-Momentum Equation	142
4	Dimensional Analysis and Dynamic Similitude	160
4.1	Dimensional Homogeneity and Dimensionless Ratios	161
4.2	Dimensions and Units	163
4.3	The Π Theorem	164
4.4	Discussion of Dimensionless Parameters	173
4.5	Similitude; Model Studies	176
5	Viscous Flow: Pipes and Channels	185
5.1	Laminar and Turbulent Flows; Internal and External Flows	185
5.2	Navier-Stokes Equations	189
5.3	Laminar, Incompressible, Steady Flow between Parallel Plates	191
5.4	Laminar Flow through Circular Tubes and Circular Annuli	197
5.5	Turbulent Shear Relations	201
5.6	Turbulent Flow in Open and Closed Conduits	208
5.7	Steady Uniform Flow in Open Channels	210
5.8	Steady Incompressible Flow through Simple Pipe Systems	213
5.9	Minor Losses	224
5.10	Lubrication Mechanics	231
6	External Flows	243
6.1	Shear and Pressure Forces	244
6.2	Boundary-Layer Concepts	246
6.3	Drag on Immersed Bodies	258
6.4	Lift	265
6.5	Free Turbulence and Transport Phenomena	268
7	Compressible Flow	278
7.1	Perfect-Gas Relations	278
7.2	Speed of a Sound Wave; Mach Number	284
7.3	Isentropic Flow	287

7.4	Shock Waves	292
7.5	Fanno and Rayleigh Lines	296
7.6	Adiabatic Flow with Friction in Conduits	300
7.7	Frictionless Flow through Ducts with Heat Transfer	305
7.8	Steady Isothermal Flow in Long Pipelines	309
7.9	Analogy of Shock Waves to Open-Channel Waves	312
8	Ideal-Fluid Flow	318
8.1	Requirements for Ideal-Fluid Flow	318
8.2	Euler's Equation of Motion	319
8.3	Irrotational Flow; Velocity Potential	323
8.4	Integration of Euler's Equations; Bernoulli Equation	326
8.5	Stream Functions; Boundary Conditions	328
8.6	The Flow Net	332
8.7	Two-Dimensional Flow	335

Part 2 Applications of Fluid Mechanics

9	Fluid Measurement	351
9.1	Pressure Measurement	351
9.2	Velocity and Volume Measurement	353
9.3	Orifices	358
9.4	Venturi Meter, Nozzle, and Other Rate Devices	367
9.5	Weirs	373
9.6	Measurement of Turbulence	378
9.7	Measurement of Viscosity	379
10	Turbomachinery	388
10.1	Homologous Units; Specific Speed	388
10.2	Elementary Cascade Theory	394
10.3	Theory of Turbomachines	396
10.4	Reaction Turbines	400
10.5	Pumps and Blowers	406
10.6	Impulse Turbines	413
10.7	Centrifugal Compressors	418
10.8	Cavitation	420
11	Steady Closed-Conduit Flow	428
11.1	Exponential Pipe-Friction Formulas	428
11.2	Hydraulic and Energy Grade Lines	431
11.3	The Siphon	435
11.4	Pipes in Series	437
11.5	Pipes in Parallel	440
11.6	Branching Pipes	443
11.7	Networks of Pipes	446

11.8	Computer Program for Steady-State Hydraulic Systems	449
11.9	Conduits with Noncircular Cross Sections	457
11.10	Aging of Pipes	459
12	Flow in Open Channels	469
12.1	Classification of Flow	470
12.2	Best Hydraulic Channel Cross Sections	471
12.3	Steady Uniform Flow in a Floodway	474
12.4	Hydraulic Jump; Stilling Basins	474
12.5	Specific Energy; Critical Depth	478
12.6	Transitions	482
12.7	Gradually Varied Flow	485
12.8	Classification of Surface Profiles	490
12.9	Control Sections	492
12.10	Computer Calculation of Gradually Varied Flow	494
12.11	Frictionless Positive Surge Wave in a Rectangular Channel	497
12.12	Frictionless Negative Surge Wave in a Rectangular Channel	498
13	Unsteady Flow in Closed Conduits	506
13.1	Oscillation of Liquid in a U Tube	507
13.2	Establishment of Flow	518
13.3	Surge Control	520
13.4	Description of the Waterhammer Phenomenon	521
13.5	Differential Equations for Calculation of Waterhammer	524
13.6	The Method-of-Characteristics Solution	527
13.7	Boundary Conditions	532
13.8	Basic Waterhammer Program	538
	Appendixes	544
A	Force Systems, Moments, and Centroids	544
A.1	Simple Force Systems	544
A.2	First and Second Moments; Centroids	545
B	Computer Programming Aids	548
B.1	Computer Language	548
B.2	Quadratures; Numerical Integration by the Trapezoidal Rule and by Simpson's Rule	548
B.3	Parabolic Interpolation	549
B.4	Solution of Algebraic or Transcendental Equations by the Bisection Method	550
B.5	Solution of Transcendental or Algebraic Equations by the Newton-Raphson Method	551
B.6	Runge-Kutta Solution of Differential Equations	553
C	Physical Properties of Fluids	557
D	Notation	565
E	Answers to Even-Numbered Problems	569
	Index	575
