Preface to the Second Edition	vii
Preface to the First Edition	ix
Acknowledgments	xi
1 Introduction to Liquid Crystals	1
1.1 Classification of Mesophases	2
1.1.1 Nematic Liquid Crystals	2
1.1.2 Smectic Liquid Crystals	6
1.1.3 Exotic Liquid Crystals	10
1.2 Effects of External Fields	17
1.3 Polymorphism in Liquid Crystals	21
2 Dynamics of Nuclear Spins	25
2.1 Density Matrix	25
2.1.1 Evolution of the Density Matrix	27
2.1.2 Density Matrix at Thermal Equilibrium	28
2.2 Nuclear Spin Hamiltonian	30
2.2.1 Zeeman Hamiltonian and Chemical Shift	30
2.2.2 Nuclear Dipole-Dipole Interaction	31
2.2.3 Nuclear Electric Quadrupole Interaction	32
2.3 Motionally Averaged Hamiltonian	33
2.3.1 Time-Averaged Dipolar and Quadrupolar Hamiltonian	35
2.3.2 Time-Averaged Chemical Shift	37
2.4 Pulsed Magnetic Resonance	38
2.4.1 Spin Dynamics for $I=1$ Nuclei	41
3 Orientational Order	53
3.1 Macroscopic Description of Order Parameters	53
3.2 Orientational Distribution Function	57
3.2.1 Nematic Order	58
3.3 Molecular Theories of Uniaxial Phases	59
3.3.1 Molecular Potential of Rod-like Molecules	59
3.3.2 Molecular Potential of Biaxial Molecules	64

3.3.3	Molecular Potential of Smectogens	69
3.4	NMR in Biaxial Mesophases	72
3.5	NMR in Uniaxial Phases	79
4	Molecular Field Theories of Flexible Nematogens	91
4.1	Additive Potential Method	92
4.1.1	Comparison with Experiments	98
4.2	Thermodynamic Properties	102
4.3	Survey of Other Methods	105
4.3.1	Chord Model	106
4.3.2	Solute Orientation: Shape Model	108
4.3.3	Model-Free Approach	111
5	Nuclear Spin Relaxation Theory	117
5.1	Master Equation of Relaxation	118
5.2	Bloch-Wangsness-Redfield Theory	120
5.2.1	Angular-Dependent Relaxation	126
5.3	Relaxation of One $I=1$ Spin	127
5.3.1	Spin-Spin Relaxation	129
5.3.2	Relaxation of a Pair of Spin- $\frac{1}{2}$ Nuclei	131
5.4	Relaxation in Multispin Systems	132
5.4.1	Other Nuclei	137
6	Director Fluctuations and Spin Relaxation	141
6.1	Relaxation Processes	142
6.2	Director Fluctuations	146
6.2.1	Static Distortions in Liquid Crystals	147
6.2.2	Correlation Functions for the Director Fluctuations	151
6.2.3	Treatment of Anisotropic Viscoelastic Constants	155
6.2.4	Critical Viscoelastic Constants	156
6.2.5	Coupling of Smectic Order with Director Fluctuations	159
6.2.6	Coupling Between Director Fluctuations and Molecular Rotations	161
6.3	Experiments	161
6.3.1	Relaxation of Solvent Molecules	161
6.3.2	Relaxation of Small Solutes	171
6.4	Nematic Order Fluctuations	174
6.4.1	Order Fluctuations in the Isotropic Phase	175
6.4.2	Order Parameter Fluctuations in the Nematic Phase	179
6.4.3	Field-Induced Order in the Isotropic Phase	180

7	Rotational and Translational Dynamics	189
7.1	Molecular Reorientation as a Stochastic Process	190
7.2	Strong Collision Model	195
7.3	Rotational Diffusion Model	197
7.3.1	Uniaxial Molecules in Uniaxial Phases	199
7.3.2	Asymmetric Molecules in Uniaxial Phases	204
7.3.3	Uniaxial Molecules in Biaxial Phases	205
7.4	Other Models of Rotational Diffusion	207
7.4.1	Diffusion-in-a-Cone Model	207
7.4.2	Anisotropic Viscosity Model	210
7.5	Experimental Situation	214
7.6	Translational Diffusion in Liquid Crystals	221
7.6.1	NMR Relaxation via Translational Diffusion	224
8	Internal Dynamics of Flexible Mesogens	233
8.1	Models of Internal Motions	234
8.2	Superimposed Rotations Model	236
8.2.1	Free Rotational Diffusion	238
8.2.2	Jump Rotation Model	240
8.3	Spin Relaxation by Correlated Internal Motions	243
8.3.1	Decoupled Model for Correlated Internal Motions	243
8.3.2	Coupled Model for Correlated Internal Motions	247
8.4	Comparison with Experiments	249
9	Multiple-Quantum and Two-Dimensional NMR	263
9.1	Two-Dimensional NMR Spectroscopy	264
9.1.1	Quadrupole Echo Spectroscopy	265
9.1.2	Two-Dimensional Exchange NMR	272
9.2	Multiple-Quantum NMR	279
9.2.1	Spin-1/2 Systems	279
9.2.2	Spin-1 Systems	282
Appendix A Relations Between Cartesian and Spherical Tensor Components		291
Appendix B Rotations, Euler Angles, and Wigner Rotation Matrices		293
Appendix C Matrix Elements of the Rotational Diffusion Operator		297
C.1	Biaxial probe in uniaxial phases	297
C.2	Uniaxial Probe in Biaxial Phases	301
Appendix D Liquid Crystal Abbreviations		303
Index		305
