Preface XIX

1	Atoms and Energy	1
1.1	Structure of Atoms	2
1.1.1	Two-proton Atoms	6
1.1.2	Three-proton Atoms	7
1.2	Nuclide Chart	7
1.3	Atom Measures	9
1.3.1	Avogadro's Number	10
1.3.2	Atomic Mass Unit (u)	10
1.4	Energy Concepts for Atoms	11
	Checkpoints	14
1.5	Relativistic Energy	15
1.5.1	Momentum and Energy	18
1.5.2	Effects of Velocity	18
1.5.3	A Natural Limit	19
1.5.4	Mass-energy	20
	Checkpoints	21
1.6	Electron Volt (eV)	22
1.7	Binding Energy of Nuclei	23
1.7.1	Calculation of Binding Energy	24
1.7.2	Q-value Calculations	24
1.8	Summary and Checkpoints	26
	Other Suggested Sources	28
	Problems – Chapter 1	28
2	Major Discoveries in Radiation Physics	29
2.1	Great Discoveries from Simple Tools	30
2.1.1	Discovery of X-rays (1895)	31
2.1.2	Discovery of Radioactivity	32
2.1.3	Discovery of the Electron	34
2.1.4	The Electron's Charge	35
2.2	First Concept of the Atom	37

	Checkpoint	39
2.3	Theory of Electromagnetic Radiation: the Quantum	39
2.3.1	Wein's Law	41
2.3.2	Rayleigh-Jeans Law	42
2.3.3	Planck's Quantum Theory of Radiation	43
	Checkpoint	45
2.3.4	Quantum Theory and the Photoelectric Effect	46
2.3.5	Electromagnetic Spectrum	48
2.3.6	The Photon	49
2.3.7	Compton Effect	50
	Checkpoint: Quantized Energy	53
2.4	Discovery of the Atom's Structure	54
2.4.1	Rutherford's Alpha Scattering Experiments	55
2.4.2	Bohr Model of the Atom	57
2.4.3	Emission and Absorption Spectra	58
2.5	Wave Mechanics: a Necessary Theory	63
2.5.1	De Broglie Waves	63
2.5.2	Confirmation of de Broglie's Hypothesis	64
2.5.3	De Broglie Waves and the Bohr Model	66
2.5.4	Wave Mechanics	67
2.5.5	Exclusion Principle	70
2.5.6	Uncertainty Principle	72
2.6	Atom Systems	73
2.6.1	The Neutron	73
2.6.2	Nuclear Shell Model	74
2.7	Summary	76
	Other Suggested Sources	77
	Problems - Chapter 2	77
3	Radioactive Transformation	79
3.1	Processes of Radioactive Transformation	79
3.1.1	Transformation of Neutron-rich Radioactive Nuclei	81
3.1.2	Double Beta ($\beta\beta$) Transformation	85
3.1.3	Transformation of Proton-rich Nuclei	85
3.1.4	Positron Emission	87
3.1.5	Average Energy of Negatron and Positron Emitters	90
3.1.6	Electron Capture (EC)	91
3.1.7	Radioactive Transformation of Heavy Nuclei by Alpha Particle Emission	93
3.1.8	Theory of Alpha Particle Transformation	96
3.1.9	Transuranic (TRU) Radionuclides	98
3.1.10	Gamma Emission	99
3.1.11	Internal Transition (Metastable or Isomeric States)	100
3.1.12	Internal Conversion	101
3.1.13	Multiple Modes of Radioactive Transformation	107

3.1.14	Transformation by Delayed Neutron Emission	109
3.1.15	Transformation by Spontaneous Fission	109
3.1.16	Proton Emission	111
3.2	Decay Schemes	112
3.3	Rate of Radioactive Transformation	115
3.3.1	Activity	116
3.3.2	Units of Radioactive Transformation	116
3.3.3	Mathematics of Radioactive Transformation	118
3.3.4	Half-Life	120
3.3.5	Mean Life	121
3.3.6	Effective Half-life	122
3.4	Radioactivity Calculations	123
3.4.1	Half-life Determination	126
3.5	Activity-mass Relationships	128
3.5.1	Specific Activity	128
3.6	Radioactive Series Transformation	131
3.6.1	Series Decay Calculations	131
3.6.2	Recursive Kinetics: the Bateman Equations	134
3.7	Radioactive Equilibrium	135
3.7.1	Secular Equilibrium	136
3.7.2	Transient Equilibrium	138
3.7.3	Radionuclide Generators	139
3.8	Total Number of Transformations (Uses of τ and λ_{eff})	142
3.9	Discovery of the Neutrino	144
	Acknowledgments	145
	Other Suggested Sources	145
	Problems - Chapter 3	146
4	Interactions	149
4.1	Production of X-rays	149
4.2	Characteristic X-rays	151
4.2.1	X-rays and Atomic Structure	153
4.2.2	Auger Electrons	154
4.3	Nuclear Interactions	156
4.3.1	Cross-Section	158
4.3.2	Q-values for Nuclear Reactions	160
4.4	Alpha Particle Interactions	162
4.4.1	Alpha-Neutron Reactions	163
4.5	Transmutation by Protons and Deuterons	164
4.5.1	Proton-Alpha Particle (p,α) Reactions	166
4.5.2	Proton-Neutron (p,n) Reactions	167
4.5.3	Proton-Gamma (p,γ) Reactions	168
4.5.4	Proton-Deuteron Reactions	168
4.5.5	Deuteron-Alpha (d,α) Reactions	169
4.5.6	Deuteron-Proton (d,p) and Deuteron-Neutron (d,n) Reactions	169

4.6	Neutron Interactions	172
4.6.1	Radiative Capture (n, γ) Reactions	172
4.6.2	Charged Particle Emission (CPE)	173
4.6.3	Neutron-Proton (n,p) Reactions	174
4.6.4	Neutron-Neutron (n,2n) Reactions	174
4.7	Activation Product Calculations	175
4.7.1	Neutron Activation Product Calculations	177
4.7.2	Charged Particles Calculations	182
4.8	Medical Isotope Reactions	184
4.9	Transuranium Elements	186
4.10	Photon Interactions	188
4.10.1	Activation by Photons	188
4.11	Fission and Fusion Reactions	191
4.11.1	Fission	191
4.11.2	Fusion	192
4.12	Summary	196
	Other Suggested Sources	197
	Problems - Chapter 4	197
5	Nuclear Fission and its Products	201
5.1	Fission Energy	203
5.2	Physics of Sustained Nuclear Fission	205
5.3	Neutron Economy and Reactivity	210
5.4	Nuclear Power Reactors	212
5.4.1	Reactor Design: Basic Systems	213
5.5	Light Water Reactors (LWRs)	215
5.5.1	Pressurized Water Reactor (PWR)	215
5.5.2	Boiling Water Reactor (BWR)	217
5.5.3	Inherent Safety Features of LWRs	219
5.5.4	Decay Heat in Power Reactors	221
5.5.5	Uranium Enrichment	222
5.6	Heavy Water Reactors (HWRs)	223
5.6.1	HWR Safety Systems	226
5.7	Breeder Reactors	227
5.7.1	Liquid Metal Fast Breeder Reactor (LMFBR)	229
5.8	Gas-cooled Reactors	232
5.8.1	High-temperature Gas Reactor (HTGR)	233
5.9	Reactor Radioactivity	234
5.9.1	Fuel Cladding	235
5.9.2	Radioactive Products of Fission	236
5.9.3	Production of Individual Fission Products	240
5.9.4	Fission Products in Spent Fuel	242
5.9.5	Fission Product Poisons	243
5.10	Radioactivity in Reactors	246
5.10.1	Activation Products in Nuclear Reactors	246

5.10.2	Tritium Production in Reactors	249
5.10.3	Low-level Radioactive Waste	250
5.11	Summary	251
	Acknowledgments	252
	Other Suggested Sources	253
	Problems - Chapter 5	253
6	Naturally Occuring Radiation and Radioactivity	255
6.1	Discovery and Interpretation	256
6.2	Background Radiation	259
6.3	Cosmic Radiation	260
6.4	Cosmogenic Radionuclides	263
6.5	Naturally Radioactive Series	267
6.5.1	Neptunium Series Radionuclides	274
6.6	Singly Occuring Primordial Radionuclides	274
6.7	Radioactive Ores and Byproducts	276
6.7.1	Resource Recovery	278
6.7.2	Uranium Ores	278
6.7.3	Water Treatment Sludge	279
6.7.4	Phosphate Industry Wastes	279
6.7.5	Elemental Phosphorus	280
6.7.6	Manhattan Project Wastes	281
6.7.7	Thorium Ores	283
6.8	Radioactivity Dating	284
6.8.1	Carbon Dating	284
6.8.2	Dating by Primordial Radionuclides	285
6.8.3	Potassium-Argon Dating	286
6.8.4	Ionium (^{230}Th) Method	287
6.8.5	Lead-210 Dating	287
6.9	Radon and its Progeny	288
6.9.1	Radon Subseries	289
6.9.2	Working Level for Radon Progeny	292
6.9.3	Measurement of Radon	296
6.10	Summary	300
	Acknowledgements	301
	Other Suggested Sources	301
	Problems - Chapter 6	302
7	Interactions of Radiation with Matter	305
7.1	Radiation Dose and Units	305
7.1.1	Radiation Absorbed Dose	306
7.1.2	Radiation Dose Equivalent	306
7.1.3	Radiation Exposure	307
7.2	Radiation Dose Calculations	309
7.2.1	Inverse Square Law	309

7.3	Interaction Processes	310
7.4	Interactions of Alpha Particles and Heavy Nuclei	312
7.4.1	Recoil Nuclei and Fission Fragments	314
7.4.2	Range of Alpha Particles	314
7.5	Beta Particle Interactions and Dose	317
7.5.1	Energy Loss by Ionization	318
7.5.2	Energy Losses by Bremsstrahlung	318
7.5.3	Cerenkov Radiation	319
7.5.4	Attenuation of Beta Particles	321
7.5.5	Range Versus Energy of Beta Particles	322
7.5.6	Radiation Dose from Beta Particles	324
7.5.7	Beta Dose from Contaminated Surfaces	327
7.5.8	Beta Contamination on Skin or Clothing	328
7.5.9	Beta Dose from Hot Particles	329
7.6	Photon Interactions	330
7.6.1	Photoelectric Interactions	331
7.6.2	Compton Interactions	332
7.6.3	Pair Production	334
7.6.4	Photodisintegration	336
7.7	Photon Attenuation and Absorption	337
7.7.1	Attenuation (μ) and Energy Absorption (μ_{En}) Coefficients	340
7.7.2	Effect of E and Z on Photon Attenuation/Absorption	344
7.7.3	Absorption Edges	346
	Checkpoints	348
7.8	Energy Transfer and Absorption by Photons	348
7.8.1	Electronic Equilibrium	353
7.8.2	Bragg-Gray Theory	355
7.9	Exposure/Dose Calculations	356
7.9.1	Point Sources	357
7.9.2	Gamma Ray Constant, Γ	358
7.9.3	Exposure and Absorbed Dose	360
7.9.4	Exposure, Kerma, and Absorbed Dose	361
7.10	Summary	363
	Acknowledgments	363
	Other Suggested Sources	364
	Problems – Chapter 7	364
8	Radiation Shielding	367
8.1	Shielding of Alpha-Emitting Sources	367
8.2	Shielding of Beta-Emitting Sources	368
8.2.1	Attenuation of Beta Particles	368
8.2.2	Bremsstrahlung Effects for Beta Shielding	371
8.3	Shielding of Photon Sources	374
8.3.1	Shielding of Good Geometry Photon Sources	375
8.3.2	Half-Value and Tenth-Value Layers	382

8.3.3	Shielding of Poor Geometry Photon Sources	384
8.3.4	Use of Buildup Factors	390
8.3.5	Effect of Buildup on Shield Thickness	391
8.3.6	Mathematical Formulations of the Buildup Factor	393
8.4	Gamma Flux for Distributed Sources	398
8.4.1	Line Sources	399
8.4.2	Ring Sources	401
8.4.3	Disc and Planar Sources	402
8.4.4	Shield Designs for Area Sources	403
8.4.5	Gamma Exposure from Thick Slabs	410
8.4.6	Volume Sources	415
8.4.7	Buildup Factors for Layered Absorbers	416
8.5	Shielding of Protons and Light Ions	417
8.6	Summary	420
	Acknowledgments	420
	Other Suggested Sources	421
	Problems – Chapter 8	421
9	Internal Radiation Dose	425
9.1	Absorbed Dose in Tissue	425
9.2	Accumulated Dose	426
9.2.1	Internal Dose: Medical Uses	429
	Checkpoints	429
9.3	Factors In The Internal Dose Equation	430
9.3.1	The Dose Reciprocity Theorem	437
9.3.2	Deposition and Clearance Data	438
9.3.3	Multicompartment Retention	438
9.4	Radiation Dose from Radionuclide Intakes	443
9.4.1	Risk-Based Radiation Standards	444
9.4.2	Committed Effective Dose Equivalent (CEDE)	445
9.4.3	Biokinetic Models: Risk-Based Internal Dosimetry	446
9.4.4	Radiation Doses Due to Inhaled Radionuclides	448
9.4.5	Radiation Doses Due to Ingested Radionuclides	458
9.5	Operational Determinations of Internal Dose	465
9.5.1	Submersion Dose	466
	Checkpoints	466
9.6	Bioassay Determination Of Intake	468
9.6.1	Weighted Estimate Of Intake	474
9.6.2	Tritium: a Special Case	475
9.6.3	Bioassay of Tritium: a Special Case	477
9.7	Summary	479
	Other Suggested Sources	479
	Problems – Chapter 9	480

10	Environmental Dispersion	483
10.1	Atmospheric Dispersion	485
10.1.1	Atmospheric Stability Effects on Dispersion	488
10.1.2	Atmospheric Stability Classes	490
10.1.3	Calculational Procedure: Uniform Stability Conditions	492
10.1.4	Distance x_{\max} of Maximum Concentration (χ_{\max})	494
10.1.5	Stack Effects	495
	Checkpoints	497
10.2	Nonuniform turbulence: Fumigation, Building Effects	497
10.2.1	Fumigation	497
10.2.2	Dispersion for an Elevated Receptor	499
10.2.3	Building Wake Effects: Mechanical Turbulence	500
10.2.4	Concentrations of Effluents in Building Wakes	501
10.2.5	Ground-level Area Sources	503
10.2.6	Effect of Mechanical Turbulence on Far-field Diffusion	504
10.3	Puff Releases	506
10.4	Sector-Averaged χ/Q Values	507
10.5	Deposition/Depletion: Gaussian Plumes	511
10.5.1	Dry Deposition	511
10.5.2	Air Concentration Due to Resuspension	515
10.5.3	Wet Deposition	517
10.6	Summary	520
	Other Suggested Sources	520
	Problems – Chapter 10	521
11	Nuclear Criticality	523
11.1	Nuclear Reactors and Criticality	524
11.1.1	Three Mile Island Accident	524
11.1.2	Chernobyl Accident	526
11.1.3	NRX Reactor: Chalk River, Ontario, December 1952	529
11.1.4	SL-1 Accident	529
11.1.5	K-reactor, Savannah River Site, 1988	530
11.1.6	Special Reactor Experiments	531
11.2	Nuclear Explosions	532
11.2.1	Fission Weapons	532
11.2.2	Fusion Weapons	533
11.2.3	Products of Nuclear Explosions	534
11.2.4	Fission Product Activity and Exposure	535
	Checkpoints	537
11.3	Criticality Accidents	538
11.3.1	Y-12 Plant, Oak Ridge National Laboratory, TN: June 16, 1958	538
11.3.2	Los Alamos Scientific Laboratory, NM: December 30, 1958	539
11.3.3	Idaho Chemical Processing Plant: October 16, 1959, January 25, 1961, and October 17, 1978	540
11.3.4	Hanford Recuplex Plant: April 7, 1962	541

11.3.5	Wood River Junction RI: July 24, 1964	541
11.3.6	UKAEA Windscale Works, UK: August 24, 1970	542
11.3.7	Bare and Reflected Metal Assemblies	542
11.4	Radiation Exposures in Criticality Events	543
11.5	Criticality Safety	544
11.5.1	Criticality Safety Parameters	546
11.6	Fission Product Release in Criticality Events	550
11.6.1	Fast Fission in Criticality Events	551
11.7	Summary	553
	Acknowledgments	554
