<i>Preface to the Second Edition</i>	v
<i>Preface to the First Edition</i>	vii
1 Ceramic Fabrication Processes: An Introductory Overview	1
1.1 Introduction	1
1.2 Ceramic Fabrication Processes	3
1.3 Production of Polycrystalline Ceramics from Powders: An Overview	28
1.4 A Case Study in Processing: The Fabrication of TiO ₂ from Powders	41
1.5 Concluding Remarks	43
Problems	44
References	45
2 Synthesis of Powders	49
2.1 Introduction	49
2.2 Desirable Powder Characteristics	49
2.3 Powder Synthesis Methods	51
2.4 Powder Preparation by Mechanical Methods	52
2.5 Powder Synthesis by Chemical Methods	62
2.6 Concluding Remarks	118
Problems	118
References	120

3	Powder Characterization	125
3.1	Introduction	125
3.2	Physical Characterization	126
3.3	Chemical Composition	156
3.4	Crystal Structure and Phase Composition	162
3.5	Surface Characterization	164
3.6	Concluding Remarks	176
	Problems	177
	References	179
4	Science of Colloidal Processing	181
4.1	Introduction	181
4.2	Types of Colloids	183
4.3	Attractive Surface Forces	183
4.4	Stabilization of Colloidal Suspensions	190
4.5	Electrostatic Stabilization	191
4.6	Steric Stabilization	211
4.7	Electrosteric Stabilization	222
4.8	Structure of Consolidated Colloids	227
4.9	Rheology of Colloidal Suspensions	230
4.10	Concluding Remarks	242
	Problems	243
	References	245
5	Sol-Gel Processing	248
5.1	Introduction	248
5.2	Types of Gels	250
5.3	Sol-Gel Processing of Aqueous Silicates	254
5.4	Metal Alkoxides	260
5.5	Sol-Gel Processing of Silicon Alkoxides	266
5.6	Sol-Gel Preparation Techniques	305
5.7	Applications of Sol-Gel Processing	315
5.8	Concluding Remarks	323
	Problems	323
	References	324
6	Powder Consolidation and Forming of Ceramics	328
6.1	Introduction	328
6.2	Packing of Particles	330
6.3	Additives and Ceramic Forming	344
6.4	Forming of Ceramics	360
6.5	Drying of Granular Ceramics	405

6.6	Binder Removal	409
6.7	Green Microstructures and Their Characterization	418
6.8	Concluding Remarks	418
	Problems	419
	References	421
7	Sintering of Ceramics: Fundamentals	425
7.1	Introduction	425
7.2	Driving Force for Sintering	427
7.3	Defects in Crystalline Solids	428
7.4	Diffusion in Crystalline Solids	441
7.5	Chemical Potential	451
7.6	Diffusional Flux Equations	459
7.7	Vapor Pressure Over a Curved Surface	461
7.8	Diffusion in Ionic Crystals: Ambipolar Diffusion	462
7.9	Concluding Remarks	466
	Problems	467
	References	468
8	Theory of Solid-State and Viscous Sintering	470
8.1	Introduction	470
8.2	Mechanisms of Sintering	471
8.3	Effects of Grain Boundaries	473
8.4	Theoretical Analysis of Sintering	476
8.5	Scaling Laws	477
8.6	Analytical Models	482
8.7	Numerical Simulation of Sintering	506
8.8	Phenomenological Sintering Equations	510
8.9	Sintering Diagrams	511
8.10	Sintering with an Externally Applied Pressure	514
8.11	The Stress Intensification Factor	522
8.12	The Sintering Stress	524
8.13	Measurement of the Sintering Stress and Stress Intensification Factor	527
8.14	Alternative Derivation of the Sintering Equations	530
8.15	Concluding Remarks	535
	Problems	536
	References	537
9	Grain Growth and Microstructure Control	540
9.1	Introduction	540
9.2	General Features of Grain Growth	541

9.3	Ostwald Ripening: The LSW Theory	546
9.4	Topological and Interfacial Tension Requirements	554
9.5	Normal Grain Growth in Dense Solids	556
9.6	Abnormal Grain Growth in Dense Solids	567
9.7	Mechanisms Controlling the Boundary Mobility	573
9.8	Grain Growth and Pore Evaluation in Porous Solids	585
9.9	Simultaneous Densification and Grain Growth	602
9.10	Fabrication Principles for Ceramics with Controlled Microstructure	611
9.11	Concluding Remarks	614
	Problems	615
	References	616
10	Liquid-Phase Sintering	620
10.1	Introduction	620
10.2	Elementary Features of Liquid-Phase Sintering	622
10.3	Stages of Liquid-Phase Sintering	624
10.4	Thermodynamic and Kinetic Factors	627
10.5	Grain Boundary Films	639
10.6	The Basic Mechanisms of Liquid-Phase Sintering	646
10.7	Hot Pressing with a Liquid Phase	670
10.8	Use of Phase Diagrams in Liquid-Phase Sintering	671
10.9	Activated Sintering	677
10.10	Vitrification	678
10.11	Concluding Remarks	682
	Problems	684
	References	685
11	Special Topics in Sintering	688
11.1	Introduction	688
11.2	Rayleigh Instability and Microstructural Evolution	689
11.3	Inhomogeneities and Their Effects on Sintering	693
11.4	Constrained Sintering I: Rigid Inclusions	702
11.5	Constrained Sintering II: Adherent Thin Films and Multilayers	723
11.6	Thin Films: Grain Growth and Dimensional Stability	733
11.7	Solid Solution Additives and the Sintering of Ceramics	739
11.8	Sintering with Chemical Reaction: Reaction Sintering	754
11.9	Viscous Sintering with Crystallization	763
11.10	Concluding Remarks	773
	Problems	774
	References	775

12	Densification Process Variables and Densification Practice	779
12.1	Introduction	779
12.2	Conventional Sintering	780
12.3	Microwave Sintering	818
12.4	Pressure Sintering	829
12.5	Concluding Remarks	841
	Problems	841
	References	843
	<i>Appendix A: Physical Constants</i>	847
	<i>Appendix B: SI Units—Names and Symbols</i>	849
	<i>Appendix C: Conversion of Units and Decimal Fractions and Multiples</i>	851
	<i>Appendix D: Ionic Crystal Radii (in units of 10^{-10} m)</i>	853
	<i>Appendix E: Density and Melting Point of Some Elements, Ceramics, and Minerals</i>	855
	<i>Appendix F: Aperture Size of U.S. Standard Wire Mesh Sieves (ASTM E 11:87)</i>	859
	<i>Index</i>	861
