List of Figures	xi
List of Tables	xv
Resumen	xvii
Abstract	xix
1. Introduction	1
2. Theoretical Framework	13
2.1. Higgs as a pNGB	13
2.1.1. Fermion sector	17
2.1.2. Effective Field Theory	20
2.1.3. Calculation of pNGB potential	25
2.2. Anarchic Partial Compositeness	30
2.2.1. Constraints to APC	35
2.3. B -physics anomalies	46
2.4. Models of Resonances	48
3. A model with leptoquark S_3 for $R_{K^{(*)}}$	55
3.1. Leptoquarks and Higgs as composite pNGBs	56
3.1.1. The global symmetry of the SCFT	57
3.1.2. Flavor	61
3.1.3. Constraints	62
3.2. Effective theory	63
3.2.1. Sector of fermions	64
3.3. Potential	66
3.3.1. EWSB	68

3.3.2.	Numerical results	70
3.3.3.	Tuning	71
3.4.	Phenomenology	73
3.4.1.	Corrections to Z couplings	73
3.4.2.	Masses of the pNGBs	74
3.4.3.	Couplings of the leptoquarks	76
3.4.4.	Analysis of flavor physics	78
3.4.5.	Collider physics	80
3.5.	Summary and discussion	81
4.	A model with vector leptoquark U_1	83
4.1.	A Composite GUT for the B -anomalies	84
4.1.1.	Coset structure	85
4.1.2.	Fermions	86
4.1.3.	Partial compositeness and flavor structure	88
4.1.4.	Baryon and lepton number conservation	89
4.1.5.	B -anomalies	89
4.1.6.	Bounds	91
4.1.7.	Effective theory	92
4.1.8.	Potential	94
4.2.	A three-site model	95
4.3.	Phenomenology	98
4.3.1.	EW symmetry breaking and spectrum of resonances	98
4.3.2.	Bounds	101
4.3.3.	Predictions for $R_{D^{(*)}}$	102
4.3.4.	Phenomenology of the pNGB scalars	104
4.3.5.	Case without P -symmetry	105
4.4.	Summary and discussion	106
5.	A Singlet-Triplet model	109
5.1.	A model with composite LQs and Higgs	110
5.1.1.	Global symmetries of the composite sector	110
5.1.2.	Representations of fermions	111
5.1.3.	Flavor structure: anarchic partial compositeness	113
5.1.4.	Constraints	114
5.1.5.	Potential	115
5.1.6.	Low energy effective theory	118
5.2.	Observables	119
5.2.1.	$R_{D^{(*)}}$	120

5.2.2.	$R_{K^{(*)}}$	120
5.2.3.	$R_{b \rightarrow c}^{\mu/e}$	121
5.2.4.	$B_{K^{(*)}\nu\bar{\nu}}$	121
5.2.5.	$B \rightarrow K\tau\mu$ and $B_s \rightarrow \tau\mu$	121
5.2.6.	$B_s \rightarrow \tau\tau$	122
5.2.7.	$\tau \rightarrow \phi\mu$	123
5.2.8.	$B_c \rightarrow \tau\nu$	123
5.2.9.	Δm_{B_s}	124
5.2.10.	Leptonic interactions of the Z	125
5.2.11.	$l_i \rightarrow l_f\gamma$	126
5.2.12.	$l_i \rightarrow 3l_f$	128
5.2.13.	LFU in W couplings	128
5.3.	Numerical results for flavor physics	129
5.4.	Spectrum of resonances	134
5.4.1.	Spin-1 resonances	134
5.4.2.	Fermionic resonances	136
5.5.	Summary and Discussion	137
6.	A flavor model with partial compositeness and Froggatt-Nielsen mechanism	141
6.1.	Outline of the model	144
6.1.1.	Fermion masses and mixing	146
6.1.2.	Interactions with resonances	149
6.1.3.	Coefficient of dipole operators	153
6.2.	Constraints	153
6.2.1.	Constraints from $\Delta F = 2$ transitions	153
6.2.2.	Constraints from $\Delta F = 1$ transitions	155
6.2.3.	Constraints from $\Delta F = 0$ processes	157
6.2.4.	Constraints from LHC	159
6.3.	The axion of composite Froggatt-Nielsen	160
6.4.	Summary and discussions	161
7.	Conclusions	163
A.	Appendices to Chapter 3	171
A.1.	Representations of $SO(13)$	171
A.2.	Invariants of the quartic potential	173
A.3.	Matching couplings	175
A.4.	Two-site theory	176

B. Appendices to Chapter 4	179
B.1. Representations of $SO(12)$	179
B.2. Mass matrices	181
B.3. Numerical estimates of the Right-handed U_1 couplings	182
C. Appendices to Chapter 5	185
C.1. Group representations	185
C.2. Embeddings of l_L and LQ couplings	187
C.3. Potential	189
Bibliography	191
Associated Publications	209
