

Contents

Introduction	1
0.1 What is Nuclear Physics?	1
0.2 This Book	3

1 Hadrons	4
1.1 Nucleons	4
1.2 Nuclear Forces	5
1.3 Pions	7
1.4 Antiparticles	8
1.5 Inversion and Parity	8
1.6 Isospin and Baryonic Number	10
1.7 Isospin Invariance	13
1.8 Magnetic Moment of the Nucleons	14
1.9 Strangeness and Hypercharge	15
1.10 Quantum Chromodynamics	21
1.11 Exercises	29

2 The Two-Nucleon System	31
2.1 Introduction	31
2.2 Electrostatic Multipoles	32
2.3 Magnetic Moment with Spin-orbit Coupling	34
2.4 Experimental Data for the Deuteron	36
2.5 A Square-well Model for the Deuteron	38
2.6 The Deuteron Wavefunction	41
2.6.1 <i>Angular momentum coupling</i>	41
2.6.2 <i>Two particles of spin $\frac{1}{2}$</i>	42
2.6.3 <i>Total wavefunction</i>	43

2.7 Particles in the Continuum: Scattering	46	5.6 Nuclear Vibrations	144
2.8 Partial Wave Expansion	49	5.7 Nuclear Deformation	149
2.9 Low Energy Scattering	53	5.8 The Nilsson Model	150
2.10 Effective Range Theory	59	5.9 The Rotational Model	153
2.11 Proton-Proton Scattering	61	5.10 Microscopic Theories	160
2.12 Neutron-Neutron Scattering	64	5.10.1 <i>Hartree-Fock theory</i>	160
2.13 High Energy Scattering	65	5.10.2 <i>The Skyrme interaction</i>	162
2.14 Laboratory and Center of Mass Systems	65	5.10.3 <i>Relativistic mean field theory</i>	164
2.15 Exercises	68	5.11 Exercises	166
3 The Nucleon-Nucleon Interaction	71	6 Radioactivity	170
3.1 Introduction	71	6.1 Introduction	170
3.2 Phenomenological Potentials	72	6.2 Multiple Decays—Decay Chain	171
3.3 Local Potentials	72	6.3 Preparation of a Radioactive Sample	173
3.3.1 <i>Nonlocal potential</i>	78	6.4 Secular Equilibrium	174
3.4 Meson Exchange Potentials	80	6.5 Natural Radioactive Series	174
3.4.1 <i>Yukawa and Van der Waals potentials</i>	80	6.6 Radiation Units	176
3.4.2 <i>Field theory picture</i>	84	6.7 Radioactive Dating	177
3.4.3 <i>Short range part of the NN interaction</i>	86	6.8 Properties of Unstable States—Level Width	179
3.4.4 <i>Chiral symmetry</i>	87	6.9 Transition Probability—Golden Rule	181
3.4.5 <i>Generalized boson exchange</i>	89	6.10 Exercises	183
3.4.6 <i>Beyond boson exchange</i>	91	7 Alpha-Decay	185
3.5 Effective Field Theories	94	7.1 Introduction	185
3.6 Exercises	96	7.2 Theory of α -Decay	185
4 General Properties of Nuclei	98	7.3 Angular Momentum and Parity in α -Decay	191
4.1 Introduction	98	7.4 Exercises	194
4.2 Nuclear Radii	98	8 Beta-Decay	195
4.3 Binding Energies	101	8.1 Introduction	195
4.4 Total Angular Momentum of the Nucleus	104	8.2 Energy Released in β -Decay	196
4.5 Multipole Moments	104	8.3 Fermi Theory	197
4.6 Magnetic Dipole Moment	106	8.4 The Decay Constant—The $\log ft$ Value	202
4.7 Electric Quadrupole Moment	109	8.5 Gamow-Teller Transitions	204
4.8 Excited States of Nuclei	111	8.6 Selection Rules	206
4.9 Nuclear Stability	114	8.7 Parity Nonconservation in β -Decay	206
4.10 Exercises	116	8.7.1 <i>Double β-Decay</i>	211
5 Nuclear Models	119	8.8 Electron Capture	213
5.1 Introduction	119	8.9 Exercises	215
5.2 The Liquid Drop Model	119	9 Gamma-Decay	218
5.3 The Fermi Gas Model	124	9.1 Introduction	218
5.4 The Shell Model	128		
5.5 Residual Interaction	142		

9.2 Quantization of Electromagnetic Fields	218		
9.2.1 <i>Fields and gauge invariance</i>	218		
9.2.2 <i>Normal modes</i>	220		
9.2.3 <i>Photons</i>	221		
9.3 Interaction of Radiation with Matter	224		
9.3.1 <i>Radiation probability</i>	227		
9.3.2 <i>Long wavelength approximation</i>	228		
9.4 Quantum and Classical Transition Rates	235		
9.5 Selection Rules	240		
9.6 Estimate of the Disintegration Constants	241		
9.7 Isomeric States	243		
9.8 Internal Conversion	244		
9.9 Resonant Absorption—The Mössbauer Effect	249		
9.10 Exercises	255		
10 Nuclear Reactions—I	258		
10.1 Introduction	258		
10.2 Conservation Laws	260		
10.3 Kinematics of Nuclear Reactions	261		
10.4 Scattering and Reaction Cross Sections	265		
10.5 Resonances	270		
10.6 Compound Nucleus	273		
10.7 Mean Free Path of a Nucleon in Nuclei	276		
10.8 Empirical Optical Potential	277		
10.9 Compound Nucleus Formation	282		
10.10 Compound Nucleus Decay	290		
10.11 Exercises	294		
11 Nuclear Reactions—II	298		
11.1 Direct Reactions	298		
11.1.1 <i>Theory of direct reactions</i>	301		
11.2 Validation of the Shell Model	303		
11.3 Photonuclear Reactions	306		
11.3.1 <i>Cross sections</i>	307		
11.3.2 <i>Sum rules</i>	308		
11.3.3 <i>Giant resonances</i>	312		
11.4 Coulomb Excitation	315		
11.5 Fission	319		
11.6 Mass Distribution of Fission Fragments	321		
11.7 Neutrons Emitted in Fission	324		
11.8 Cross Sections for Fission	325		
11.9 Energy Distribution in Fission	327		
11.10 Isomeric Fission	328		
11.11 Exercises	331		
12 Nuclear Astrophysics	334		
12.1 Introduction	334		
12.2 Astronomical Observations	335		
12.2.1 <i>The Milky Way</i>	335		
12.2.2 <i>Dark matter</i>	336		
12.2.3 <i>Luminosity and Hubble's law</i>	337		
12.3 The Big Bang	338		
12.4 Stellar Evolution	341		
12.4.1 <i>Stars burn slowly</i>	341		
12.4.2 <i>Gamow peak and astrophysical S-factor</i>	342		
12.5 The Sun	347		
12.5.1 <i>Deuterium formation</i>	348		
12.5.2 <i>Deuterium burning</i>	350		
12.5.3 <i>^3He burning</i>	351		
12.5.4 <i>Reactions involving ^7Be</i>	352		
12.6 The CNO Cycle	354		
12.6.1 <i>Hot CNO and rp process</i>	355		
12.7 Helium Burning	357		
12.8 Red Giants	360		
12.9 Advanced Burning Stages	362		
12.9.1 <i>Carbon burning</i>	362		
12.9.2 <i>Neon burning</i>	364		
12.9.3 <i>Oxygen burning</i>	365		
12.9.4 <i>Silicon burning</i>	365		
12.10 Synthesis of Heaviest Elements	367		
12.11 White Dwarfs and Neutron Stars	368		
12.12 Supernova Explosions	370		
12.13 Nuclear Reaction Models	375		
12.13.1 <i>Microscopic models</i>	375		
12.13.2 <i>Potential and DWBA models</i>	376		
12.13.3 <i>Parameter fit</i>	377		
12.13.4 <i>Statistical models</i>	377		
12.14 Exercises	379		
13 Rare Nuclear Isotopes	385		
13.1 Introduction	385		
13.2 Light Exotic Nuclei	388		
13.2.1 <i>Halo nuclei</i>	390		
13.2.2 <i>Borromean nuclei</i>	393		

13.3 Superheavy Elements	395
13.4 Exercises	400
Appendix A Angular Momentum	401
A.1 Orbital Momentum	401
A.2 Spherical Functions	402
A.3 Generation of Rotations	402
A.4 Orbital Rotations	403
A.5 Spin	404
A.6 Ladder Operators	406
A.7 Angular Momentum Multiplets	409
A.8 Multiplets as Irreducible Representations	412
A.9 SU(2) Group and Spin $\frac{1}{2}$	413
A.10 Properties of Spherical Harmonics	414
A.10.1 <i>Explicit derivation</i>	414
A.10.2 <i>Legendre polynomials</i>	415
A.10.3 <i>Completeness</i>	416
A.10.4 <i>Spherical functions as matrix elements of finite rotations</i>	417
A.10.5 <i>Addition theorem</i>	417
Appendix B Angular Momentum Coupling	419
B.1 Tensor Operators	419
B.1.1 <i>Transformation of operators</i>	419
B.1.2 <i>Scalars and vectors</i>	420
B.1.3 <i>Tensors of rank 2</i>	421
B.1.4 <i>Introduction to selection rules</i>	422
B.2 Angular Momentum Coupling	423
B.2.1 <i>Two subsystems</i>	423
B.2.2 <i>Decomposition of reducible representations</i>	424
B.2.3 <i>Tensor operators and selection rules revisited</i>	426
B.2.4 <i>Vector coupling of angular momenta</i>	427
B.2.5 <i>Wigner-Eckart theorem</i>	428
B.2.6 <i>Vector Model</i>	429
Appendix C Symmetries	432
C.1 Time Reversal	432
C.2 Spin Transformation and Kramer's Theorem	433
C.3 Time-conjugate Orbits	435
C.4 Two-component Neutrino and Fundamental Symmetries	436
C.5 Charge Conjugation	437
C.6 Electric Dipole Moment	438
C.7 <i>CPT</i> -Invariance	439

Appendix D Relativistic Quantum Mechanics	440
D.1 Lagrangians	440
D.1.1 <i>Covariance</i>	441
D.2 Electromagnetic Field	442
D.3 Relativistic Equations	444
D.3.1 <i>Particle at rest</i>	446
D.3.2 <i>Covariant form: γ matrices</i>	446
D.4 Probability and Current	448
D.5 Wavefunction Transformation	448
D.5.1 <i>Bilinear Covariants</i>	450
D.5.2 <i>Parity</i>	451
D.6 Plane Waves	451
D.6.1 <i>Summary of plane wave spinor properties</i>	453
D.6.2 <i>Projection operators</i>	454
D.7 Plane Wave Expansion	454
D.8 Electromagnetic Interaction	455
D.9 Pauli Equation	455
D.9.1 <i>Spin-orbit and Darwin terms</i>	457
Appendix E Useful Constants and Conversion Factors	459
E.1 Constants	459
E.2 Masses	460
E.3 Conversion Factors	460
<i>References</i>	461
<i>Index</i>	469
