<i>Preface to the second edition</i>	x
<i>Preface to the first edition</i>	xi
<i>Acknowledgements</i>	xii
<b>1</b> <b>Electrons, photons and atoms</b>	<b>1</b>
1.1 The atomic nature of matter	1
1.2 The electron	3
1.3 Black body radiation	9
1.4 The photoelectric effect	14
1.5 X-rays and the Compton effect	18
1.6 The nuclear atom	23
1.7 Atomic spectra and the Bohr model of hydrogen	27
1.8 The Stern–Gerlach experiment – angular momentum and spin	41
1.9 de Broglie’s hypothesis and the genesis of wave mechanics	48
Problems	54
<b>2</b> <b>The elements of quantum mechanics</b>	<b>59</b>
2.1 Waves and particles, wave packets and the uncertainty principle	59
2.2 The Schrödinger equation	68
2.3 Expansions, operators and observables	73
2.4 One-dimensional examples	81
2.5 Angular momentum	89
2.6 Central forces	103
2.7 Several-particle systems	108
2.8 Approximation methods	114
Problems	142
<b>3</b> <b>One-electron atoms</b>	<b>147</b>
3.1 The Schrödinger equation for one-electron atoms	147
3.2 Energy levels	152
3.3 The eigenfunctions of the bound states	155

3.4	Expectation values. The virial theorem	164	7.5	The ground state of two-electron atoms	325
3.5	One-electron atoms in parabolic coordinates	168	7.6	Excited states of two-electron atoms	337
3.6	Special hydrogenic systems: positronium; muonium; antihydrogen; muonic and hadronic atoms; Rydberg atoms	173	7.7	Doubly excited states of two-electron atoms. Auger effect (autoionisation). Resonances	344
	Problems	180		Problems	347
<b>4</b>	<b>Interaction of one-electron atoms with electromagnetic radiation</b>	<b>183</b>	<b>8</b>	<b>Many-electron atoms</b>	<b>349</b>
4.1	The electromagnetic field and its interaction with charged particles	184	8.1	The central field approximation	349
4.2	Transition rates	189	8.2	The periodic system of the elements	361
4.3	The dipole approximation	195	8.3	The Thomas–Fermi model of the atom	369
4.4	The Einstein coefficients	201	8.4	The Hartree–Fock method and the self-consistent field	382
4.5	Selection rules and the spectrum of one-electron atoms	203	8.5	Corrections to the central field approximation. Correlation effects. $L$ – $S$ coupling and $j$ – $j$ coupling	401
4.6	Line intensities and the lifetimes of excited states	212	8.6	Density functional theory	416
4.7	Line shapes and widths	215		Problems	419
4.8	The photoelectric effect	225	<b>9</b>	<b>Interaction of many-electron atoms with electromagnetic radiation and with static electric and magnetic fields</b>	<b>423</b>
4.9	The scattering of radiation by atomic systems	230	9.1	Many-electron atoms in an electromagnetic field	423
	Problems	234	9.2	Selection rules for electric dipole transitions. Oscillator and line strengths	429
<b>5</b>	<b>One-electron atoms: fine structure and hyperfine structure</b>	<b>237</b>	9.3	Retardation effects. Magnetic dipole and electric quadrupole transitions	435
5.1	Fine structure of hydrogenic atoms	237	9.4	The spectra of the alkalis	440
5.2	The Lamb shift	249	9.5	Helium and the alkaline earths	446
5.3	Hyperfine structure and isotope shifts	254	9.6	Atoms with several optically active electrons. Multiplet structure	450
	Problems	270	9.7	X-ray spectra	457
<b>6</b>	<b>Interaction of one-electron atoms with external electric and magnetic fields</b>	<b>271</b>	9.8	The Stark effect	462
6.1	The Stark effect	271	9.9	The Zeeman effect. The Hanle effect and level-crossing spectroscopy	468
6.2	The Zeeman effect	287		Problems	475
	Problems	304	<b>10</b>	<b>Molecular structure</b>	<b>477</b>
<b>7</b>	<b>Two-electron atoms</b>	<b>307</b>	10.1	General nature of molecular structure	477
7.1	The Schrödinger equation for two-electron atoms. Para and ortho states	307	10.2	The Born–Oppenheimer separation for diatomic molecules	480
7.2	Spin wave functions and the role of the Pauli exclusion principle	309	10.3	Electronic structure of diatomic molecules	485
7.3	Level scheme of two-electron atoms	313	10.4	The rotation and vibration of diatomic molecules	513
7.4	The independent particle model	316	10.5	The electronic spin and Hund’s cases	522

10.6	The structure of polyatomic molecules	529			
	Problems	539			
<b>11</b>	<b>Molecular spectra</b>	<b>541</b>	<b>15</b>	<b>Masers, lasers and their interaction with atoms and molecules</b>	<b>813</b>
11.1	Rotational spectra of diatomic molecules	541	15.1	Masers and lasers	814
11.2	Vibrational-rotational spectra of diatomic molecules	543	15.2	Lasers and spectroscopy	837
11.3	Electronic spectra of diatomic molecules	549	15.3	Atoms in intense laser fields	846
11.4	Spin-dependent interactions and electric dipole transitions	558	15.4	Laser cooling and trapping of neutral atoms	881
11.5	The nuclear spin	561	15.5	Bose-Einstein condensation	892
11.6	The inversion spectrum of ammonia	564	15.6	Atom lasers	897
	Problems	568	<b>16</b>	<b>Further developments and applications of atomic and molecular physics</b>	<b>901</b>
<b>12</b>	<b>Atomic collisions: basic concepts and potential scattering</b>	<b>571</b>	16.1	Magnetic resonance	901
12.1	Types of collisions, channels, thresholds and cross-sections	571	16.2	Atom optics	914
12.2	Potential scattering. General features	575	16.3	Atoms in cavities and ions in traps	940
12.3	The method of partial waves	579	16.4	Atomic clocks	952
12.4	The integral equation of potential scattering	599	16.5	Astrophysics	967
12.5	The Coulomb potential	606		<b>Appendices</b>	<b>979</b>
12.6	Scattering of two identical particles	612	1	Classical scattering by a central potential	981
12.7	Approximation methods	619	2	The laboratory and centre of mass systems	989
12.8	Absorption processes and scattering by a complex potential	657	3	Evaluation of integrals by using generating functions	996
	Problems	663	4	Angular momentum – useful formulae and results	1000
<b>13</b>	<b>Electron-atom collisions and atomic photoionisation</b>	<b>669</b>	5	Hydrogenic wave functions in momentum space	1009
13.1	Electron-atom collisions. General features	669	6	The Hamiltonian for a charged particle in an electromagnetic field	1016
13.2	Elastic and inelastic electron-atom collisions at low energies	673	7	The Dirac equation and relativistic corrections to the Schrödinger equation	1018
13.3	Elastic and inelastic electron-atom collisions at high energies	705	8	Separation of the centre of mass coordinates for an <i>N</i> -electron atom	1029
13.4	Electron impact ionisation of atoms	731	9	The space-fixed and body-fixed frames for a diatomic molecule	1032
13.5	Atomic photoionisation	745	10	Evaluation of two-centre integrals	1035
	Problems	761	11	The rotational wave functions of a diatomic molecule	1037
<b>14</b>	<b>Atom-atom collisions</b>	<b>765</b>	12	Dalitz integrals	1040
14.1	Collisions at very low energies	766	13	Solutions of selected problems	1044
14.2	Elastic collisions at low velocities	769	14	Fundamental constants, atomic units and conversion factors	1072
14.3	Non-elastic collisions between atoms	778		<b>References</b>	<b>1077</b>
14.4	The impact parameter method	782		<b>Author Index</b>	<b>1083</b>
14.5	Atom-atom collisions at high velocities	801		<b>Subject Index</b>	<b>1093</b>
	Problems	810
