

CONTENTS

<i>Preface</i>	ii
<i>Notation</i>	v
CHAPTER I. TORSION	
1. Non-circular Prisms	1
2. Saint-Venant's Theory	1
3. Prandtl's Membrane Analogy	3
4. Kelvin's Fluid-flow Analogy	10
5. Hollow Sections	21
6. Warping of the Cross Sections	24
7. Round Shafts of Variable Diameter	31
8. Jacobsen's Electrical Analogy	38
	45
CHAPTER II. ROTATING DISKS	49
9. Flat Disks	49
10. Disks of Variable Thickness	59
11. Disks of Uniform Stress	65
CHAPTER III. MEMBRANE STRESSES IN SHELLS	70
12. General Theory	70
13. Applications	75
14. Shells of Uniform Strength	83
15. Non-symmetrical Loading	90
CHAPTER IV. BENDING OF FLAT PLATES	100
16. General Theory	100
17. Simple Solutions; Saint-Venant's Principle	111
18. Circular Plates	119
19. Catalogue of Results	127
20. Large Deflections	134
CHAPTER V. BEAMS ON ELASTIC FOUNDATION	141
21. General Theory	141
22. The Infinite Beam	144
23. Semi-infinite Beams	154
24. Finite Beams	159
25. Applications; Cylindrical Shells	162
CHAPTER VI. TWO-DIMENSIONAL THEORY OF ELASTICITY	171
26. The Airy Stress Function	171
27. Applications to Polynomials in Rectangular Coordinates	179
28. Polar Coordinates	184
29. Kirsch, Boussinesq, and Michell	193
30. Plasticity	202

CONTENTS

CHAPTER VII. THE ENERGY METHOD	212
31. The Three Energy-Theorems	212
32. Examples on Least Work	219
33. Proofs of the Theorems	226
34. Bending of Thin-walled Curved Tubes	234
35. Flat Plates in Bending	245
CHAPTER VIII. BUCKLING	251
36. Rayleigh's Method	251
37. Coil Springs; Beams on Elastic Foundation	258
38. Proof of Rayleigh's Theorem	264
39. Vianello's or Stodola's Method	268
40. Rings, Boiler Tubes, and Arches	274
41. Twist-bend Buckling of Beams	283
42. Buckling of Shafts by Torsion	291
43. Twist Buckling of Columns	297
44. Thin Flat Plates	301
CHAPTER IX. MISCELLANEOUS TOPICS	308
45. Mohr's Circle for Three Dimensions	308
46. Torsion of Pretwisted Thin-walled Sections	315
47. The Theorems of Biezeno and Spielvogel	319
<i>Problems</i>	327
<i>Answers to Problems</i>	367
<i>Index</i>	376
