Preface	<i>xi</i>
About the Companion Website	<i>xiii</i>
1 Single Degree of Freedom Systems	1
1.1	Introduction 1
1.2	Spring-Mass System 1
1.3	Spring-Mass-Damper System 6
1.4	Forced Response 10
1.5	Transfer Functions and Frequency Methods 17
1.6	Complex Representation and Impedance 23
1.7	Measurement and Testing 25
1.8	Stability 28
1.9	Design and Control of Vibrations 31
1.10	Nonlinear Vibrations 35
1.11	Computing and Simulation in MATLAB TM 38
	Chapter Notes 43
	References 44
	Problems 46
2 Lumped Parameter Models	49
2.1	Introduction 49
2.2	Modeling 52
2.3	Classifications of Systems 56
2.4	Feedback Control Systems 57
2.5	Examples 59
2.6	Experimental Models 64
2.7	Nonlinear Models and Equilibrium 65
	Chapter Notes 67
	References 68
	Problems 68
3 Matrices and the Free Response	71
3.1	Introduction 71
3.2	Eigenvalues and Eigenvectors 71
3.3	Natural Frequencies and Mode Shapes 77

3.4	Canonical Forms	86
3.5	Lambda Matrices	91
3.6	Eigenvalue Estimates	94
3.7	Computation Eigenvalue Problems in MATLAB	101
3.8	Numerical Simulation of the Time Response in MATLAB™	104
	Chapter Notes	106
	References	107
	Problems	108
4	Stability	113
4.1	Introduction	113
4.2	Lyapunov Stability	113
4.3	Conservative Systems	116
4.4	Systems with Damping	117
4.5	Semidefinite Damping	118
4.6	Gyroscopic Systems	119
4.7	Damped Gyroscopic Systems	121
4.8	Circulatory Systems	122
4.9	Asymmetric Systems	123
4.10	Feedback Systems	128
4.11	Stability in the State Space	131
4.12	Stability of Nonlinear Systems	133
	Chapter Notes	137
	References	138
	Problems	139
5	Forced Response of Lumped Parameter Systems	143
5.1	Introduction	143
5.2	Response via State Space Methods	143
5.3	Decoupling Conditions and Modal Analysis	148
5.4	Response of Systems with Damping	152
5.5	Stability of the Forced Response	155
5.6	Response Bounds	157
5.7	Frequency Response Methods	158
5.8	Stability of Feedback Control	161
5.9	Numerical Simulations in MATLAB	163
	Chapter Notes	165
	References	166
	Problems	167
6	Vibration Suppression	171
6.1	Introduction	171
6.2	Isolators and Absorbers	172
6.3	Optimization Methods	175
6.4	Metastructures	179
6.5	Design Sensitivity and Redesign	181
6.6	Passive and Active Control	184
6.7	Controllability and Observability	188
6.8	Eigenstructure Assignment	193

6.9	Optimal Control	196
6.10	Observers (Estimators)	203
6.11	Realization	208
6.12	Reduced-Order Modeling	210
6.13	Modal Control in State Space	216
6.14	Modal Control in Physical Space	219
6.15	Robustness	224
6.16	Positive Position Feedback Control	226
6.17	MATLAB Commands for Control Calculations	229
	Chapter Notes	233
	References	234
	Problems	237
7	Distributed Parameter Models	241
7.1	Introduction	241
7.2	Equations of Motion	241
7.3	Vibration of Strings	247
7.4	Rods and Bars	252
7.5	Vibration of Beams	256
7.6	Coupled Effects	263
7.7	Membranes and Plates	267
7.8	Layered Materials	271
7.9	Damping Models	273
7.10	Modeling Piezoelectric Wafers	276
	Chapter Notes	281
	References	281
	Problems	283
8	Formal Methods of Solutions	287
8.1	Introduction	287
8.2	Boundary Value Problems and Eigenfunctions	287
8.3	Modal Analysis of the Free Response	290
8.4	Modal Analysis in Damped Systems	292
8.5	Transform Methods	294
8.6	Green's Functions	296
	Chapter Notes	300
	References	301
	Problems	301
9	Operators and the Free Response	303
9.1	Introduction	303
9.2	Hilbert Spaces	304
9.3	Expansion Theorems	308
9.4	Linear Operators	309
9.5	Compact Operators	315
9.6	Theoretical Modal Analysis	317
9.7	Eigenvalue Estimates	318
9.8	Enclosure Theorems	321
	Chapter Notes	324

	References	324
	Problems	325
10	Forced Response and Control	327
10.1	Introduction	327
10.2	Response by Modal Analysis	327
10.3	Modal Design Criteria	330
10.4	Combined Dynamical Systems	332
10.5	Passive Control and Design	336
10.6	Distributed Modal Control	338
10.7	Nonmodal Distributed Control	340
10.8	State Space Control Analysis	341
10.9	Vibration Suppression using Piezoelectric Materials	342
	Chapter Notes	344
	References	345
	Problems	346
11	Approximations of Distributed Parameter Models	349
11.1	Introduction	349
11.2	Modal Truncation	349
11.3	Rayleigh-Ritz-Galerkin Approximations	351
11.4	Finite Element Method	354
11.5	Substructure Analysis	359
11.6	Truncation in the Presence of Control	361
11.7	Impedance Method of Truncation and Control	369
	Chapter Notes	371
	References	371
	Problems	372
12	Vibration Measurement	375
12.1	Introduction	375
12.2	Measurement Hardware	376
12.3	Digital Signal Processing	379
12.4	Random Signal Analysis	383
12.5	Modal Data Extraction (Frequency Domain)	387
12.6	Modal Data Extraction (Time Domain)	390
12.7	Model Identification	395
12.8	Model Updating	397
12.9	Verification and Validation	398
	Chapter Notes	400
	References	401
	Problems	402
A	Comments on Units	405
B	Supplementary Mathematics	409
	Index	413
