

CONTENTS

Editor's Foreword	xi
Preface	xiii
Chapter 1 Introduction	
1-1 Magnetic Resonance	1
1-2 Electronic Paramagnetism	3
1-3 Paramagnetic Entities	8
1-4 Supplemental Bibliography	11
References Cited in Chapter 1	12
Chapter 2 The Phenomenon of Magnetic Resonance	
2-1 The Description of Magnetic Resonance by Precession	14
2-2 A Phenomenological Description of Relaxation; the Bloch Equations	25
2-3 Quantum-Mechanical Time-Dependent Perturbation Theory	43
2-4 Rate Equations and Saturation	47
2-5 Experimental Techniques	52
2-6 Supplemental Bibliography	57
References Cited in Chapter 2	57
Chapter 3 Ligand or Crystal Fields	
3-1 Paramagnets and Transition-Group Ions	58
3-2 Free Atoms and Ions	60
3-3 The Crystal-Field Description of Transition Group Ions in Crystals	65
3-4 The Molecular Orbital Treatment of Transition-Group Ions	73
3-5 Ions with Several <i>d</i> Electrons	77
3-6 The Ground State and Its Relationship to Electron Paramagnetic Resonance	82
3-7 Rare Earths	85
3-8 Kramer's Theorem	86
3-9 The Jahn-Teller Theorem	88
3-10 Supplemental Bibliography	90
References Cited in Chapter 3	90

Chapter 4	The Effective Spin Hamiltonian	
4-1	The Ground Manifold and the Effective Spin	92
4-2	The Spin Hamiltonian	93
4-3	Calculation of the Spin Hamiltonian Using Perturbation Theory	103
4-4	The Parameters in the Spin Hamiltonian	106
4-5	Supplemental Bibliography	111
	References Cited in Chapter 4	112
Chapter 5	Electron Paramagnetic Resonance Spectra	
5-1	Zeeman Splitting	114
5-2	Fine Structure	121
5-3	Hyperfine Structure	131
5-4	The Intensities of Magnetic Resonance Transitions	149
5-5	Supplemental Bibliography	155
	References Cited in Chapter 5	155
Chapter 6	Interactions	
6-1	The Nature of Interactions; Exchange	157
6-2	The Effects of Interactions; Electron Paramagnetic Resonance Line Shape	162
6-3	The Effects of Interactions; Strongly Interacting Pairs	172
6-4	Supplemental Bibliography	177
	References Cited in Chapter 6	177
Chapter 7	Effects of Stress and Electric Fields	
7-1	The Spin Hamiltonian Description	179
7-2	The Influence of Fields on Electron Paramagnetic Resonance Spectra	183
7-3	Transitions Caused by Oscillating Electric Fields or Stresses	191
7-4	Supplemental Bibliography	195
	References Cited in Chapter 7	196
Chapter 8	Spin-Lattice Relaxation	
8-1	Spin-Phonon Hamiltonian	197
8-2	Elementary Relaxation Rates	200
8-3	Observed Relaxation Times	203
8-4	Other Relaxation Mechanisms	206
8-5	Phonon Bottleneck	209
8-6	Supplemental Bibliography	213
	References Cited in Chapter 8	213
Chapter 9	The Effects of Motion; Liquids	
9-1	The Tumbling Paramagnetic Complex	214
9-2	Random Functions and Correlations	218

9-3	Influence of Molecular Tumbling on Hyperfine Structure	225
	References Cited in Chapter 9	230
Chapter 10	Examples of Electron Paramagnetic Resonance Spectra	
10-1	Atomic Hydrogen	232
10-2	Other $^2S_{1/2}$ -State Atoms and Ions	240
10-3	Associates	247
10-4	The Dynamic Jahn-Teller Effect	252
10-5	Transition-Group Impurities in Ferroelectric Crystals	255
10-6	Rare-Earth Impurities in Alkaline-Earth Halide Crystals	257
10-7	Diatomic Molecule-Ion Imperfections	262
	References Cited in Chapter 10	267
Chapter 11	Double Resonance	
11-1	General Characteristics of Double Resonance	271
11-2	Masers	275
11-3	Dynamic Nuclear Polarization	276
11-4	ENDOR	281
11-5	Optical Pumping	284
	References Cited in Chapter 11	289
Appendix A	Quantum-Mechanical Properties of Angular Momenta	291
Appendix B	Solutions of the Spin Hamiltonian Eigenvalue Problem to Second Order	293
Appendix C	Relative Intensity to First Order in Perturbation Theory	300
Index		303
