CONTENTS

STATE OF A SYSTEM 1
1. State of a System 3
2. Ideal Gases 5

FIRST LAW OF THERMODYNAMICS 7
3. First Law of Thermodynamics 9
4. Specific Heats 11
5. Adiabatic Transformation 13

SECOND LAW OF THERMODYNAMICS . . . . . .
6. Second Law of Thermodynamics 17
7. Carnot Cycle 18
8. Absolute Temperature . . . . . .
9. Entropy 22
10. Entropy of p-V-T Systems 25
11. Clapeyron Equation 27
12. Van der Waals Equation 28

BOLTZMANN DISTRIBUTION 31
13. The Phase Space
14. Probability of a Distribution-Boltzmann Distribution 35
15. Equipartition of Kinetic Energy 36
16. Maxwell Distribution and Barometric Distribution 37
7. Proof that ß Is the Same for Two Substances in Contact . 39
18. Entropy and Probability . . . 40

THERMODYNAMIC FUNCTIONS 41
19. Helmholtz Free Energy 43
20. State Sum Z and Free Energy . . 47
21. Thermodynamic Potential at Constant Pressure' 48
22. Phase Rule 51

THERMODYNAMICS OF SOLUTIONS 53
23. Thermodynamic Functions of Dilute Solutions . 55
24. Osmotic Pressure 58
25. Chemical Equilibria in Solutions 59
26. Debye-Hueckel Theory
27. Distribution of a Solute between Two' Solvents 63
28. Vapor Pressure, Boiling and Freezing Points of Solutions . 64

QUASI-ERGODIC SYSTEMS 67
29. Stationary Distribution for a Quasi-ergodic System 69
30. Temperature Equilibrium from Statistical Distribution
31. Boltzmann Distribution 77
32. Adiabatic Invariance of Q(E)
33. Thermodynamic Functions and Phase Space Interpretation 77

STATISTICAL DISTRIBUTION OF QUANTIZED SYSTEMS . . 79
34. Boltzmann Distribution for Quantized Systems . 81
35. Application to Atoms and Molecules 82
36. State Sum for Quantized Systems-Thermodynamic Functions 84

37. The Oscillator 86
38. Specific Heat of Solids 88
39. Thermodynamics of Radiation . .
40. Planck's Formula 96
41. Radiative Transitions of an Atom 98

THERMODYNAMICS OF MAGNETIZATION 99
42. Statistical Theory of Paramagnetism 101
43. Weiss Theory of Ferromagnetism 104
44. Thermodynamics of Magnetization-Application to Superconductivity 105
4.5. Paramagnetic Cooling 107

THIRD LAW OF THERMODYNAMICS 111
46. Third Law of Thermodynamics 113
47. Entropy of Solids 114
48. Quantization of Molecular Translation 116
49. Sackur-Tetrode Formula 117
50. Vapor Pressure of a Solid and a Liquid 120
51. Thermoionic Effect 121
52. Entropy of a Diatomic Gas 122
53. Gaseous Reactions 123
54. Ionization Equilibrium in a Gas 126

GENERAL METHODS OF STATISTICAL MECHANICS 127
5.5. New Discussion of Boltzmann Distribution 129
56. Thermodynamical Relationships for Macroscopic Systems 132
57. The Grand Canonical Ensemble . . . 135

THE QUANTUM STATISTICS . 139
58. Systems with Identical Particles 141
59. Bose-Einstein Statistics 142
60. Fermi Statistics 144
61. Probabilities of Transition and Statistics 146
62. Black Body Radiation from B. E. Statistics . 148
63. The Bose-Einstein Gas 149
64. Helium II . . . 152
65. Fermi Gas 154
66. Case of Complete Degeneracy 158
67. Statistical Atom . 159
68. Electrons in Metals . . . 163

MISCELLANEOUS APPLICATIONS 167
69. Vacuum and Radiations 169
70. Matter in Unusual Conditions 171
71. Thermonuclear Reactions 174
72. Stellar Equilibria 177
73. White Dwarfs 179
74. Turbulence . . 181
