

ADVANCES IN

ATOMIC, MOLECULAR, AND OPTICAL PHYSICS

Edited by

Benjamin Bederson

DEPARTMENT OF PHYSICS

NEW YORK UNIVERSITY

NEW YORK, NEW YORK

Herbert Walther

UNIVERSITY OF MUNICH AND

MAX-PLANK-INSTITUT FÜR QUANTENOPTIK

MUNICH, GERMANY

Volume 41

ACADEMIC PRESS

San Diego
New York

London
Sydney

Boston
Tokyo

BIBLIOTECA
LEO FALCON

Contents

CONTRIBUTORS	vii
--------------------	-----

Two-Photon Entanglement and Quantum Reality

Yanhua Shih

I. Introduction	2
II. “Ghost” Image and Interference	5
III. Experimental Testing of Bell’s Inequalities	14
IV. Why Two-Photon But Not Two Photons?	22
V. Conclusion	35
VI. Acknowledgments	35
VII. Notes	36
VIII. References	36

Quantum Chaos with Cold Atoms

Mark G. Raizen

I. Introduction	43
II. Two-Level Atoms in a Standing-Wave Potential	45
III. Experimental Method	49
IV. Single Pulse Interaction	54
V. Kicked Rotor	59
VI. The Modulated Standing Wave	72
VII. Conclusion and Future Directions	78
VIII. Acknowledgments	79
IX. References	79

Study of the Spatial and Temporal Coherence of High-Order Harmonics

Pascal Salières, Anne L’Huillier, Philippe Antoine, and Maciej Lewenstein

I. Introduction..	84
II. Theory of Harmonic Generation in Macroscopic Media	91
III. Phase Matching	99
IV. Spatial Coherence	106
V. Temporal and Spectral Coherence	116
VI. Future Applications	131
VII. Conclusion	136

VIII. Acknowledgments	137
IX. References	137

Atom Optics in Quantized Light Fields

*Matthias Freyburger, Alois M. Herkommer, Daniel S. Krämer,
Erwin Mayr, and Wolfgang P. Schleich*

I. Introduction	142
II. Ante..	145
III. Atomic Deflection by a Resonant Quantum Field	149
IV. Atom Optics in Nonresonant Fields	162
V. The Bragg Regime	170
VI. Conclusion..	175
VII. Acknowledgments	176
VIII. References	176

Atom Waveguides

Victor I. Balykin

I. Introduction	182
II. Guiding of Atoms with Static Electrical and Magnetic Fields	184
III. Evanescent Light Wave	187
IV. Guiding Atoms with Evanescent Wave	213
V. Atom Waveguide with Propagating Laser Fields	236
VI. Experiments with Atom Guiding	250
VII. Acknowledgments	257
VIII. References	257

Atomic Matter Wave Amplification by Optical Pumping

Ulf Janicke and Martin Wilkens

I. Introduction	262
II. Model of an Atom Laser	264
III. Master Equation	272
IV. Photon Reabsorption	278
V. Summary	291
VI. Acknowledgments	294
VII. Appendix A: N-Atom Master Equation	294
VIII. References	303

SUBJECTINDEX	305
CONTENTS OF VOLUMES IN THIS SERIES	311
