Contents at a Glance

Preface xxi

I Programming Environments and Development Tools . 1

1 Parallel Programming Models and Paradigms 4
2 Parallel Programming Languages and Environments 28
3 MPI and PVM Programming 48
4 Linking Message-Passing Environments 87
5 Active Objects 10 1
6 Using Scoped Behavior to Optimize Data Sharing Idioms 113
7 Component-Based Development Approach 131
8 Hypercomputing with LiPS 153
9 An Efficient Tuple Space Programming Environment 175
10 Debugging Parallelized Code **197**
11 WebOS: Operating System Services for Wide-Area Applications **225**

II Java for High Performance Computing 247

12 Distributed-Object Computing **249**
13 Java and Different Flavors of Parallel Programming Models 274
14 The HPspmd Model and its Java Binding **291**
15 Web-Based Parallel Computing with Java **310**

III Algorithms and Applications 327

16 Object-Oriented Implementation of Parallel Genetic Algorithms **331**
17 Application-Specific Load Balancing on Heterogeneous Systems 350
18 Time Management in Parallel Simulation 375
19 Hardware System Simulation 395

20 Real-Time Resource Management Middleware: Open Systems and Applications 418
21 Data Placement in Shared-Nothing Database Systems 440
22 Parallel Inference with Very Large Knowledge Bases 455
23 MaRT: Lazy Evaluation for Parallel Ray Tracing 486
24 Fast Content-Based Image Retrieval 506
25 Climate Ocean Modeling 526
26 Computational Electromagnetics 540
27 CFD Simulation: A Case Study in Software Engineering 558
28 Quantum Reactive Scattering Calculations 580
29 Biomedical Applications Modeling 604

A Glossary 627

Index 659
