INTERFACING SENSORS TO THE IBM@ PC

WILLIS J. TOMPKINS
JOHN G. WEBSTER
Editors

University of Wisconsin-Madison

Prentice Hall P T R, Englewood Cliffs, New Jersey 07632

Contents

LIST OF CONTRIBUTORS viii
PREFACE ix

1 AMPLIFIERS 1

1.1 Ideal op amps 1
1.2 Basic op amp circuit blocks 3
1.3 Analog computation 8
1.4 Nonlinear op amp applications 12
1.5 Op-amp considerations 16
1.6 Guarding 18
1.7 Passive filters 24
1.8 Active filters 26
1.9 Switched capacitor filters 30
1.10 Voltage-controlled oscillators 30
1.11 References 33

2 GROUNDS, SHIELDS, AND POWER SUPPLIES 34

2.1 Interference 34
2.2 Grounding 35
2.3 Electric field interference 38

2.4 Isolation 47
2.5 Magnetic problems 49
2.6 Electromagnetic fields 51
2.7 Power supplies 52
2.8 References 58

3 INTERFACING TO THE IBM PC BUS 59

3.1 Prototype boards 59
3.2 Parallel I/O port design 63
3.3 Interrupt structures 76
3.4 Counters 94
3.5 Timers 96
3.6 Programmable timers 98
3.7 The 8253 timer/counter 100
3.8 Examples of the use of the 8253 timer/counter 100
3.9 References 106

4 BASIC SIGNAL CONVERSION 107

4.1 Binary codes 108
4.2 Sampling concepts 114
4.3 Digital-to-analog converters 122
4.4 References 127

5 ANALOG-TO-DIGITAL CONVERSION 128

5.1 ADC essentials 128
5.2 A/D conversion techniques 135
5.3 Interfacing the ADC to the IBM PC 142
5.4 Data-acquisition systems 145
5.5 How to select and use an ADC 150
5.6 A low-cost data acquisition system for the IBM PC 156
5.7 References 161

6 SERIAL RS-232C INTERFACING 162

6.1 Serial interface 162
6.2 Handshaking 163
6.3 Asynchronous techniques 164
6.4 Decoding serial bit streams and error detection 166
6.5 Transmission line considerations 169
6.6 Line drivers and receivers 170
6.7 Voltage and mechanical definitions of the RS-232C standard 173
6.8 Practical use of the asynchronous communication adapter 176
6.9 Data acquisition using a serial interface 180

6.10 Fiber optics 181
6.11 References 182

7 INTERFACING TEMPERATURE SENSORS 183

7.1 *P-N* junction thermometers 183
7.2 IC temperature sensors 189
7.3 Thermocouples 193
7.4 Calibration of thermometers 200
7.5 Resistive temperature sensors 202
7.6 Other temperature measurement techniques 222
7.7 References 223

8 INTERFACING OPTICAL SENSORS 225

8.1 Sources of optical radiation 225
8.2 Modification of spectral content 231
8.3 Modification of optical path 233
8.4 Optical sensors 236
8.5 Some common sensor systems 244
8.6 Simple sensor application 246
8.7 References 248

9 INTERFACING DISPLACEMENT SENSORS 250

9.1 Potentiometric resistive transducers 250
9.2 Resistive strain gages 252
9.3 Linear variable differential transformers 268
9.4 Piezoelectric transducers 282
9.5 Equivalent circuit representations 286
9.6 Signal conditioning 289
9.7 Accelerometers 293
9.8 Pressure transducers 298
9.9 Displacement transducers 299
9.10 References 300

10 INTERFACING FLOW SENSORS 302

10.1 Thermal flowmeters 302
10.2 Mechanical flowmeters 306
10.3 Differential-pressure flowmeters 309
10.4 Electromagnetic flowmeters 3 12
10.5 Ultrasonic flow sensors 316
10.6 References 331

11 INTERFACING USER INPUT DEVICES 333

11.1 Joysticks 333
11.2 Trackballs 341
11.3 Mouses 343
11.4 Touch screens 346
11.5 Light pens 348
11.6 X-Y digitizers 356
11.7 Digital camera 357
11.8 References 360

12 GPIB (IEEE 488) INTERFACING 361

12.1 GPIB bus structure 362
12.2 GPIB handshake protocol 364
12.3 Bus operation 365
12.4 GPIB example: A system for monitoring multiple hospital patients 369
12.5 Implementation of a GPIB interface 371
12.6 References 373

13 TELEPHONE COMMUNICATION 374

13.1 Modem communication 374
13.2 Voice grade modems 377
13.3 Performance capabilities 380
13.4 Communication protocol 383
13.5 References 385

14 LOCAL AREA NETWORKS 386

14.1 LAN types 387
14.2 Network topologies 388
14.3 LAN examples 390
14.4 Standards 393
14.5 The future LAN 394
14.6 References 395

A MANUFACTURERS OF INTERFACE HARDWARE FOR THE PC 396

A.1 Manufacturers of parallel data acquisition boards 396
A.2 Manufacturers of serial data acquisition systems 397
A.3 Manufacturers of GPIB boards 398

B SCHEMATIC DIAGRAM AND PORT DEFINITIONS 399

B.l Prototype data acquisition board 399
B.2 Tecmar Lab Master data acquisition board ports 399

C DIGITAL OSCILLOSCOPE PROGRAM 404

C. 1 The program 404
C.2 Future software directions 406
C.3 References 432

INDEX 435
