Notation	xv	4. Vorticity	45
PART ONE	I		
1. Historical Survey	3	4.1. Generation and Spreading of Vorticity, 45	
1.1. Myth and Prehistory, 3		4.2. Dynamic Similarity, 46	
1.2. Antiquity and the Middle Ages, 6		4.3. Numerical Experiments, 47	
1.3. The Renaissance, 10		4.4. Fluid Motion at Very Small Reynolds Numbers, 48	
1.4. The Cartesian Vortex Theory, 11		4.5. Boundary Layer and Shear Flow, 52	
1.5. The Era of Classical Mechanics, 13		4.6. The Classical Theory of Vorticity, 54	
1.6. Significance of the Vortex Concept in the 20th Century, 15		4.7. The Lanchester-Prandtl Hypothesis of Flying, 56	
2. Basic Concepts and Kinematic Considerations	18	4.8. Wheel, Propeller, and Boomerang, 59	
2.1. Two Definitions, 18			
2.2. Rotation and Conservation Law of Matter, 19		5. Separation	67
2.3. Streamlines and Pathlines, 21		5.1. Flow Separation and Vortex Formation, 67	
2.4. Are Vortices Visible?, 24		5.2. Vortices Behind an Edge, 71	
2.5. The Spectrum of Vortices, 26		5.3. Vortex Separation, 74	
3. Properties of Simple Vortices	28	5.4. Note on the Evolution of Fast-Swimming Fish, 77	
3.1. State Variables and Basic Laws, 28		5.5. Three-Dimensional Vortices Behind Bodies, 81	
3.2. The Two Basic Types of Plane Vortices, 30		5.6. Swirling Flows, 87	
3.3. The Bucket Experiment, 34		5.7. Free Vortex Rings, 91	
3.4. Intake and Discharge Vortices, 34		6. Instability and Turbulence	97
3.5. The Motion of Several Point Vortices, 38		6.1. What is Instability?, 97	
3.6. Curved Vortex Tubes, 40		6.2. Instability of Shear Flows and Boundary Layers, 98	
		6.3. Periodic Vortex Shedding, 101	
		6.4. Flow-Induced Vibration, 106	

xii Contents

- 6.5. Rotating Bodies, 112
- 6.6. Some Remarks on Turbulence, 119
- 6.7. Examples of Turbulent Vortices, 121
- 6.8. Flow Drag and its Control, 123

PART TWO

7. Fluid Flow in a Rotating System

127

129

- 7.1. Absolute Rotation and Mach's Principle, 129
- 7.2. Centrifugal Force and Coriolis Force, 131
- 7.3. Dynamic Similarity in a Rotating System, 134
- 7.4. Hyperbolicity, 135
- 7.5. Circulation in Rotating Vessels, 138
- 7.6. Instability of Rotating Fluids, 145

8. Stratification in Ocean and Atmosphere

150

- 8.1. The Earth's Air and Water Envelope, 150
- 8.2. Upward and Downward Motions, 152
- 8.3. Cellular Convections, 158
- 8.4. Vortices and Vorticity in Stratified Flows, 162
- 8.5. Analogy Between Rotating and Stratified Fluids, 164
- 8.6. Rotation in Stratified Fluids, 165

9. Circulations in Atmosphere, Ocean, and Earth

169

- 9.1. The General Circulation of the Atmosphere, 169
- 9.2. Ocean Circulations, 175
- 9.3. The Gulf Stream, 178
- 9.4. Laboratory Experiments and Computer Calculations, 181
- 9.5. An Excursion into the Earth's History, 183

10. Single Vortices in Atmosphere and Ocean

187

- 10.1. Preferred Frequency Ranges in the Spectrum of Vortices, 187
- 10.2. Cold Front and Squall Line as Origins of Local Vortices, 188
- 10.3. Tornadoes and Waterspouts, 190
- 10.4. Dust Devils, 196
- 10.5. Langmuir Vortices, 197
- 10.6. Tidal Vortices, 198

11. Hurricanes

203

- 11.1. Historical Notes, 203
- 11.2. Hurricanes in the 20th Century, **204**
- 11.3. Conditions for the Development of Hurricanes, 206
- 11.4. The Hurricane as a Heat Engine, **207**

12. Extraterrestrial Vortices

212

- 12.1. Periodicity as an Ordering Principle, 212
- 12.2. The Solar System, 212
- 12.3. Circulations and Vortices in Planetary Atmospheres, 215
- 12.4. Rotating Stars, 218
- 12.5. Exotic Vortex Stars, 220
- 12.6. Galactic Vortices, 222
- 12.7. The Limits of Human Perception, 224

MATHEMATICAL SUPPLEMENT

243

Notation for the Mathematical Supplement

245

1M. Some Definitions and Kinematical Aspects

247

- 1.1M. Some Definitions, 247
- 1.2M. Rotation and Conservation Law of Matter, 248
- 1.3M. Streamlines and Pathlines, 248
- 1.4M. Lines, Tubes, and Filaments, 249

2M. Conservation Laws of Viscous Fluids	250	5.3M. Spiral Discontinuity Lines, 269	
2.1M. The Navier-Stokes Equations, 250		5.4M. Vortex Lines and Tubes, 270	
2.2M. The Vorticity-Transport Equation, 251		5.5M. Vortex Concept in Wing Theory, 271	
2.3M. Analogy Between Vorticity and Heat Transfer, 251			
2.4M. Dimensionless Form of the Vorticity-Transport Equation, 252			
3M. Vortices in Viscous Fluid Flows	253	6M. Vortices in Slow Motion	273
3.1M. Some Closed-Form Solutions, 253		6.1M. Plane Vortices, 273	
3.2M. Note on the Occurrence of Extremal Values Inside a Vorticity Field, 257		6.2M. Axisymmetric Vortices, 274	
3.3M. Similarity Solutions, 257			
3.4M. Boundary-Layer Flows, 259		7M. Rotating Fluid Systems	276
4M. Vorticity and Circulation Theorems of Inviscid Fluids	263	7.1M. Centrifugal and Coriolis Forces, 276	
4.1M. Helmholtz's Theorems, 263		7.2M. Hyperbolicity and Taylor-Proudman Theorem, 276	
4.2M. Kelvin's Circulation Theorem, 264		7.3M. Geostrophic Vortices, 277	
4.3M. Extensions, 264		7.4M. Gradient, Inertia, and Cyclostrophic Motions, 278	
4.4M. Some Solutions, 265		7.5M. The Ekman Layer, 279	
5M. Vortices in Potential Flow	267	8M. Vortices in Stratified Fluids	280
5.1M. Point Vortices, 267		8.1M. The Boussinesq Approximation, 280	
5.2M. Point Vortices as a Hamiltonian System, 269		8.2M. Viscous-Flow Solutions, 280	
		8.3M. Inviscid-Flow Solutions, 281
