Conventions	xvii	3 The First Law: the machinery	81
0 Introduction: orientation and background	1	State functions and exact differentials	81
The structure of science		3.1 State functions	82
Matter	2	3.2 The temperature dependence of the enthalpy	86
Energy	3	3.3 The relation between C_V and C_p	90
0.1 Contributions to the energy	3	<i>Checklist of key ideas</i>	92
0.2 Energy units	4	<i>further reading</i>	92
0.3 Equipartition	4	<i>Exercises</i>	92
0.4 The quantization of energy	5	<i>Problems</i>	93
0.5 The populations of states		4 The Second Law: the concepts	97
Further reading	9	The direction of spontaneous change	9%
Part 1: Equilibrium	11	4.1 The dispersal of energy	98
1 The properties of gases	13	4.2 Entropy	99
The perfect gas	13	4.3 Entropy changes accompanying specific processes	106
1.1 The states of gases	13	4.4 The Third Law of thermodynamics	110
1.2 The gas laws	17	4.5 Reaching very low temperatures	112
1.3 The kinetic model of gases	23	Concentrating on the system	113
Real gases	30	4.6 The Helmholtz and Gibbs energies	113
1.4 Molecular interactions	31	4.7 Standard molar Gibbs energies	118
1.5 The van der Waals equation	33	<i>Checklist of key ideas</i>	119
1.6 The principle of corresponding states	37	<i>Further reading</i>	120
<i>Checklist of key ideas</i>	38	<i>Exercises</i>	120
<i>further reading</i>	39	<i>Problems</i>	122
<i>Exercises</i>	39	5 The Second Law: the machinery	125
<i>Problems</i>	42	Combining the First and Second Laws	125
2 The First Law: the concepts	45	5.1 Properties of the internal energy	126
The basic concepts	45	5.2 Properties of the Gibbs energy	128
2.1 Work, heat, and energy	46	5.3 The chemical potential of a pure substance	132
2.2 The First Law	48	Real gases: the fugacity	132
Work and heat	51	5.4 The definition of fugacity	133
2.3 Expansion work	51	5.5 Standard states of real gases	133
2.4 Heat transactions	55	5.6 The relation between fugacity and pressure	133
2.5 Enthalpy	57	<i>Checklist of key ideas</i>	136
2.6 Adiabatic changes	62	<i>Further reading</i>	136
Thermochemistry	65	<i>Exercises</i>	137
2.7 Standard enthalpy changes	66	<i>Problems</i>	137
2.8 Standard enthalpies of formation	70	6 Physical transformations of pure substances	141
2.9 The temperature dependence of reaction enthalpies	72	Phase diagrams	141
<i>Checklist of key ideas</i>	73	6.1 The stabilities of phases	142
<i>further reading</i>	74	6.2 Phase boundaries	142
<i>Exercises</i>	75	6.3 Three typical phase diagrams	143
<i>Problems</i>	78		

Phase stability and phase transitions	145	The response of equilibria to the conditions	222
6.4 The thermodynamic criterion of equilibrium	145	9.2 How equilibria respond to pressure	223
6.5 The dependence of stability on the conditions	146	9.3 The response of equilibria to temperature	224
6.6 The location of phase boundaries	150	Applications to selected systems	227
6.7 The Ehrenfest classification of phase transitions	152	9.4 The extraction of metals from their oxides	227
The physical liquid surface	154	9.5 Acids and bases	229
6.8 Surface tension	154	9.6 Biological activity: the thermodynamics of ATP	235
6.9 Curved surfaces	155	<i>Checklist of key ideas</i>	238
