Preface . . . . .	vii
Introduction . . . . .	ix

## Chapter 1. Basic concept, definitions, and approaches . . . . . 1

1.1. Characteristics of a radiation field, calculation errors, and sensitivity of calculated results to the input parameters . . . . .	1
1.2. Physical interpretation of the relative sensitivity . . . . .	11
1.3. Mathematical-statistics approach to the determination of the error in a calculated result . . . . .	14
1.4. Capabilities of sensitivity analysis . . . . .	19

## Chapter 2. Calculation methods and models

2.1. Preparation of constants for calculations; errors in interaction cross sections . . . . .	27
2.2. Software for calculating radiation fields, calculation errors, and sensitivity of results to the input parameters . . . . .	32
2.3. Models for benchmark calculations . . . . .	40

## Chapter 3. Errors in the results of shielding calculations and sensitivity of the results to the input parameters

3.1. Methodological errors . . . . .	53
3.2. Sensitivity of the results to the parameters of the radiation source and the detector response function . . . . .	70
3.3. Estimate of the errors in the calculated results and study of the sensitivity of the results to the neutron interaction cross sections for homogeneous and heterogeneous media . . . . .	97
3.4. Estimate of errors and study of the sensitivity of calculations of radiation fields in models for real shields . . . . .	124
3.5. Estimate of nonlinear effects in sensitivity analysis . . . . .	137

Chapter 4. Experiments in sensitivity analysis  
and in the determination of  
calculation errors

**4.1. Benchmark experiments and sensitivity analysis . . . . . 139**  
**4.2. Comparison of calculations and experiments; roles played by  
various components of the calculation errors . . . . . 145**  
**References . . . . . 157**
