## Contents

---

<b>Introduction.</b>	1
<b>1. Cryogenics</b>	<b>4</b>
<b>1.1</b> Gas Liquefaction	4
1.2 Magnetic Cooling	16
<b>2. Thermometry.</b>	<b>24</b>
2.1 Primary Thermometers	24
2.2 Secondary Thermometers	29
<b>3. Specific Heats</b>	<b>34</b>
<b>3.1</b> Lattice Specific Heat	34
3.2 Specific Heat Anomalies	38
3.3 Electronic Specific Heat	43
3.4 Calorimetry	46
<b>4. Magnetism.</b>	<b>50</b>
<b>4.1</b> Ion Paramagnetism	50
4.2 Antiferromagnetism	59
4.3 Nuclear Orientation	62
4.4 Oscillatory Effects	65
<b>5. Transport Phenomena</b>	<b>71</b>
5.1 Electrical Conductivity	71
5.2 Dielectric Heat Conduction	79
5.3 Metallic Heat Conduction	85
<b>6. Superconductivity</b>	<b>92</b>
<b>6.1</b> Superconductive metals	93
6.2 The Transition	96
6.3 The Meissner Effect	98
6.4 Superconductive Thermodynamics	100
6.5 The Intermediate State	106
6.6 Superconductive Electrodynamics	111
6.7 The Depth of Penetration	114
6.8 Heat Conduction	119
6.9 Theory	122
6.10 Applications	124

## CONTENTS

<b>7. The Helium Problem . . . . .</b>	127
7.1 The Diagram of State . . . . .	128
7.2 The Lambda-Phenomenon. . . . .	130
7.3 Viscosity and Superfluidity . . . . .	133
7.4 The Thermal Effects . . . . .	137
7.5 Heat Conduction . . . . .	140
7.6 Wave Propagation . . . . .	143
7.7 The Helium Film. . . . .	145
7.8 Turbulence . . . . .	147
7.9 <b>Theory . . . . .</b>	149
<b>7.10 Helium Three . . . . .</b>	152
 <b>8. Miscellaneous . . . . .</b>	160
<b>8.1 The Melting Curve . . . . .</b>	160
8.2 Thermal Expansion. . . . .	161
8.3 Mechanical Properties . . . . .	163
8.4 Trapped Free Radicals . . . . .	165
8.5 Rubble Chambers . . . . .	167
8.6 Masers . . . . .	168
 Appendix I . . . . .	171
(a) <b>Vapour pressure of H<sub>2</sub> . . . . .</b>	171
(b) <b>Vapour pressure of He<sup>4</sup> . . . . .</b>	172
(c) <b>Vapour pressure of He<sup>3</sup> . . . . .</b>	174
 Appendix II . . . . .	176
(a) <b>Debye Functions . . . . .</b>	176
(b) <b>Values of θ<sub>D</sub> and γ . . . . .</b>	178
 <b>Index . . . . .</b>	179
